**The Impact of European Integration on Regional Structural Change and Cohesion** Christiane Krieger-Boden, Edgar Morgenroth, George Petrakos, 2008-04-02 Edited by three European editors and spanning across Europe, this excellent study focuses on the effects of the European integration process on the inter-regional division of labour in both western and Eastern European countries. Using extensive empirical analysis of the changes of regional specialization over a period of two decades, observing its causes and consequences the authors show economic integration as a relocation of resources across sectors and space. The authors argue that the resulting challenge to both regional and social cohesion in the enlarged European Union may require a reorientation of cohesion policy at European, national and local levels. Disaggregated national data sets with respect to both the sectoral and spatial levels are combined with an analysis of both regional structural change and the role of foreign direct investment in this process. This book will be of great interest to post graduate students and researchers interested in international trade and regional economics as well as policy makers engaged with regional and structural changes at both a European and national level.

**Microsatellite Markers** Ibrokhim Y. Abdurakhmonov, 2016-11-30 Microsatellite or so-called simple sequence repeat (SSR) markers have been one of the most reliable molecular markers derived from the DNA molecule, which were widely and successfully used for more than 25 years in the genetic studies of environmental, agricultural, and biomedical sciences. The objective of this Microsatellite Markers book is to rehighlight and provide some updates on previous and recent utilization of microsatellite markers for various applications in agriculture and medicine, which void emerging opinion on full death of microsatellites as useful genetic markers. Chapters presented here demonstrate the future benefit of SSRs in many genetic studies as well as disease diagnosis and prognosis.

**Moduli Spaces of Riemann Surfaces** Benson Farb, Richard Hain, Eduard Looijenga, 2013-08-16 Mapping class groups and moduli spaces of Riemann surfaces were the topics of the Graduate Summer School at the 2011 IAS/Park City Mathematics Institute. This book presents the nine different lecture series comprising the summer school, covering a selection of topics of current interest. The introductory courses treat mapping class groups and Teichmüller theory. The more advanced courses cover intersection theory on moduli spaces, the dynamics of polygonal billiards and moduli spaces, the stable cohomology of mapping class groups, the structure of Torelli groups, and arithmetic mapping class groups. The courses consist of a set of intensive short lectures offered by leaders in the field, designed to introduce students to exciting, current research in mathematics. These lectures do not duplicate standard courses available elsewhere. The book should be a valuable resource for graduate students and researchers interested in the topology, geometry and dynamics of moduli spaces of Riemann surfaces and related topics. Titles in this series are co-published with the Institute for Advanced Study/Park City Mathematics Institute. Members of the Mathematical Association of America (MAA) and the National Council of Teachers of Mathematics (NCTM) receive a 20% discount from list price.

*Voting in Old and New Democracies* Richard Gunther, Paul A. Beck, Pedro C. Magalhães, Alejandro Moreno, 2015-08-11 Voting in Old and New Democracies examines voting behavior and its determinants based on 26 surveys from 18 countries on five continents between 1992 and 2008. It systematically analyzes the impact on voting choice of factors rooted in the currently

dominant approaches to the study of electoral behavior, but adds to this analysis factors introduced or reintroduced into this field by the Comparative National Elections Project (CNEP)—socio-political values, and political communication through media, personal discussion, and organizational intermediaries. It demonstrates empirically that these long-neglected factors have significant political impact in many countries that previous studies have overlooked, while economic voting is insignificant in most elections once long-term partisan attitudes are taken into consideration. Its examination of electoral turnout finds that the strongest predictor is participation by other family members, demonstrating the importance of intermediation. Another chapter surveys cross-national variations in patterns of intermediation, and examines the impact of general social processes (such as socioeconomic and technological modernization), country-specific factors, and individual-level attitudinal factors as determinants of those patterns. Complementing its cross-national comparative analysis is a detailed longitudinal case study of one country over 25 years. Finally, it examines the extent of support for democracy as well as significant cross-national differences in how democracy is understood by citizens. Written in a clear and accessible style, *Voting in Old and New Democracies* significantly advances our understanding of citizen attitudes and behavior in election settings.

*Expanding Thurston Maps* Mario Bonk,Daniel Meyer,2017-11-28 This monograph is devoted to the study of the dynamics of expanding Thurston maps under iteration. A Thurston map is a branched covering map on a two-dimensional topological sphere such that each critical point of the map has a finite orbit under iteration. It is called expanding if, roughly speaking, preimages of a fine open cover of the underlying sphere under iterates of the map become finer and finer as the order of the iterate increases. Every expanding Thurston map gives rise to a fractal space, called its visual sphere. Many dynamical properties of the map are encoded in the geometry of this visual sphere. For example, an expanding Thurston map is topologically conjugate to a rational map if and only if its visual sphere is quasimetrically equivalent to the Riemann sphere. This relation between dynamics and fractal geometry is the main focus for the investigations in this work. The book is an introduction to the subject. The prerequisites for the reader are modest and include some basic knowledge of complex analysis and topology. The book has an extensive appendix, where background material is reviewed such as orbifolds and branched covering maps.

Right here, we have countless book **Hu06** and collections to check out. We additionally have enough money variant types and plus type of the books to browse. The standard book, fiction, history, novel, scientific research, as capably as various additional sorts of books are readily nearby here.
