Modeling Cognitive and Tactical Aspects in Hunter - Killer Missions Ohad Berman,2006 In this thesis, we present a Markov-based probability model for a human operated system of aerial hunter-killers attacking time-sensitive targets. We explore the effect of two resources time and supply of munitions and some cognitive aspects of the human operator on the performance of the system in different operational scenarios. We model the combat mission as a sequence of engagements; each of which includes a classification process, followed by a firing decision, and a shooting process. The model of the classification process addresses possible effects of stress on the operator's behavior and performance. Two shooting tactics are considered. The random shooting tactic, which is memory-less and with no fire control, BDA capability or mission support systems, sets a benchmark for more effective shoot-look-shoot tactic, where resources are utilized more efficiently. The model represents various tactical parameters regarding rules of engagement and various mixes of resources. Applying the model on some real-world scenarios, we identify mixes of resources and tactical engagement rules that enhance the effectiveness and efficiency of the combat mission.

Armed Drones and the Ethics of War Christian Enemark,2013-09-11 This book assesses the ethical implications of using armed unmanned aerial vehicles ('hunter-killer drones') in contemporary conflicts. The American way of war is trending away from the heroic and towards the post-heroic, driven by a political preference for air-powered management of strategic risks and the reduction of physical risk to US personnel. The recent use of drones in the War on Terror has demonstrated the power of this technology to transcend time and space, but there has been relatively little debate in the United States and elsewhere over the embrace of what might be regarded as politically desirable and yet morally worrisome: risk-free killing. Arguably, the absence of a relationship of mutual risk between putative combatants poses a fundamental challenge to the status of war as something morally distinguishable from other forms of violence, and it also undermines the professional virtue of the warrior as a courageous risk-taker. This book considers the use of armed drones in the light of ethical principles that are intended to guard against unjust increases in the incidence and lethality of armed conflict. The evidence and arguments presented indicate that, in some respects, the use of armed drones is to be welcomed as an ethically superior mode of warfare. Over time, however, their continued and increased use is likely to generate more challenges than solutions, and perhaps do more harm than good. This book will be of much interest to students of the ethics of war, airpower, counter-terrorism, strategic studies and security studies in general.

Taking Fire! David L. Porter,2020-03-03 As a first lieutenant in the 11th Armored Cavalry Regiment, U.S. Army pilot David Porter was section leader in an Aerial Scout platoon in Vietnam. Their mission was to conduct reconnaissance in OH-6 aircraft (a.k.a. Light Observation Helicopter or Loach) near the Cambodian border. Finding and engaging the enemy at low altitude in coordination with an AH-1 Cobra gunship circling above, these units developed a remarkable method of fighting the Viet Cong: Hunter-Killer Operations. The tactic had great local success but died with the war. Few today are aware of the hazards these pilots faced during times of intense combat. Porter's vivid memoir recounts the internal workings of a legendary air cavalry troop, in-the-cockpit combat actions, and the men who were key players on this perilous battleground.

UAVs: Unmanned Aerial Vehicles John Hamilton,2012-01-01 This title explores the development and use of unmanned aerial vehicles, or remotely piloted aircraft, more commonly known as drones. Readers will follow the history of the origins and development of the incredible military technology behind UAVs

such as the Predator Drone, the Wasp Micro-Air Vehicle, the Global Hawk unmanned aerial vehicle, the hand-launched remote control RQ-11 Raven for field troops, and the long-endurance hunter-killer MQ-9 Reaper. Chapters detail their military and performance specifications as well as their features and advantages in the field (including their cameras, sensors, control systems, and weapons) and their pilots (often sitting on the other side of the world). Readers will also learn about their use in significant combat and surveillance missions throughout the Middle East and in other countries. Includes spec boxes and other text features. Aligned to Common Core Standards and correlated to state standards. A&D Xtreme is an imprint of Abdo Publishing, a division of ABDO.

Theory, Design, and Applications of Unmanned Aerial Vehicles A. R. Jha, Ph.D., 2016-11-18 This book provides a complete overview of the theory, design, and applications of unmanned aerial vehicles. It covers the basics, including definitions, attributes, manned vs. unmanned, design considerations, life cycle costs, architecture, components, air vehicle, payload, communications, data link, and ground control stations. Chapters cover types and civilian roles, sensors and characteristics, alternative power, communications and data links, conceptual design, human machine interface, sense and avoid systems, civil airspace issues and integration efforts, navigation, autonomous control, swarming, and future capabilities.

Hunter Killer T. Mark McCurley, Kevin Maurer, 2015-10-13 The first-ever inside look at the US military's secretive Remotely Piloted Aircraft program—equal parts techno-thriller, historical account, and war memoir Remotely piloted aircraft (RPA), commonly referred to by the media as drones, are a mysterious and headline-making tool in the military's counterterrorism arsenal. Their story has been pieced together by technology reporters, major newspapers, and on-the-ground accounts from the Middle East, but it has never been fully told by an insider. In *Hunter Killer*, Air Force Lt. Col. T. Mark McCurley provides an unprecedented look at the aviators and aircraft that forever changed modern warfare. This is the first account by an RPA pilot, told from his unique-in-history vantage point supporting and executing Tier One counterterrorism missions. Only a handful of people know what it's like to hunt terrorists from the sky, watching through the electronic eye of aircraft that can stay aloft for a day at a time, waiting to deploy their cutting-edge technology to neutralize threats to America's national security. *Hunter Killer* is the counterpoint to the stories from the battlefield told in books like *No Easy Day* and *American Sniper*: While special operators such as SEALs and Delta Force have received a lot of attention in recent years, no book has ever told the story of the unmanned air war. Until now.

Theory, Design, and Applications of Unmanned Aerial Vehicles A. R. JHA PH.D, 2020-06-30 *Theory, Design, and Applications of Unmanned Aerial Vehicles* provides a complete overview of the theory, design, and applications of unmanned aerial vehicles. It covers the basics, including definitions, attributes, manned vs. unmanned, design considerations, life cycle costs, architecture, components, air vehicle, payload, communications, data link, and ground control stations. Chapters cover types and civilian roles, sensors and characteristics, alternative power, communications and data links, conceptual design, human-machine interface, sense and avoid systems, civil airspace issues and integration efforts, navigation, autonomous control, swarming, and future capabilities. Features, Provides a complete overview of the theory, design, and applications of unmanned aerial vehicles, Covers the basics, including definitions, attributes, manned vs. unmanned, design considerations, life cycle costs, architecture, components, air vehicle, payload, communications, data link, and ground control stations, Discusses types and civilian roles, sensors and characteristics, alternative power, communications and data links, conceptual design, human-machine interface, sense and avoid systems, civil airspace issues and integration efforts, navigation, autonomous control, swarming, and future capabilities, The book first

identifies potential commercial and military applications of these vehicles. Then it describes UAV configuration exclusively for complex military applications, including hunter-killer vehicles. The book defines the performance requirements for the onboard EO, radio-frequency (RF), and critical electronic sensor and components. This include trade-off studies on the accuracy requirements of the sensors and components to maintain normal aircraft performance with no compromise on the reliability and safety of the aircraft and its contents. The author discusses UAV navigation system and Automatic Flight Control System (AFCS) requirements to ensure that automatic flight control laws are obeyed to maintain the vehicle flight traveling on the selected destination point. The focus then shifts to the propulsion systems and electrical power requirements for the operation of sensors and weapons aboard the autonomous vehicle. UAV technology is a very important and tough topic. The author provides a comprehensive analysis of the latest UAV technology papers. This includes microelectromechanical system (MEMS)-and nanotechnology-based sensors and components for AFCS for UAV applications, the application of robotics for real-time, high-resolution simulation of autonomous vehicle dynamics. Finally, the author considers the survivability and safety of UAVs while operating in hostile regions. Theory, Design, and Applications of Unmanned Aerial Vehicles provides a comprehensive and practical introduction to UAV system technology. Book jacket.

Unmanned Aerial Vehicles Steven J. Zaloga, 2011-07-20 Unmanned aerial vehicles (UAVs) are the most dynamic field of aerospace technology, and have only emerged from the shadows recently, despite having been in use for decades. After some limited use in World War II, UAVs emerged as substitutes for manned reconnaissance aircraft in missions deemed too dangerous to risk an aircrew. This book examines the development of UAV technology and speculates on its future potential. Packed with rare, recently declassified photographs and detailed full-colour cutaways, this title goes on to investigate the deployment of UAVs, from early Israeli airforce use to their current role over Iraq and Afghanistan today.

Modern Technologies Enabling Safe and Secure UAV Operation in Urban Airspace P. Śniatała, S.S. Iyengar, A. Bendarma, 2021-07 The use of Unmanned Aerial Vehicles (UAVs) or 'drones' continues to increase, and keeping up to date with technological, legal and commercial developments related to this domain is important, particularly with regard to safety and security in regional and border security operations. This book presents edited contributions from the NATO Advanced Training Course (ATC) entitled "Modern technologies enabling safe and secure UAV operation in urban airspace", held in Agadir, Morocco, from 25 to 30 November 2019. Participants included experienced scientists and industry engineers involved in UAV development and activity, and the aim of the ATC was to increase awareness among all NATO and partner countries of the safety and security challenges raised by UAV flights in urban airspace, as well as sharing the knowledge and expertise of specialists working to advance the technologies and capabilities that will enhance safety and security across NATO and its partner countries. The ATC began with a presentation about current UAV technologies, and the technological features that might present a threat to the

safety of commercial or military airspace applications. Other topics covered included the U-space concept; management of UAV operations in controlled airspace; integration of manned and unmanned aviation; testing and certification of UAVs; autonomous UAV flights; application of UAVs in urban airspace; and BVLOS flights and sensors for UAV navigation and communication. The book will be of interest to all those working with UAVs or seeking to develop and encourage their use, particularly for security purposes.

Environmental Crime and Social Conflict Avi Brisman, Nigel South, Rob White, 2016-03-09 This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

Governing Lethal Behavior in Autonomous Robots Ronald Arkin, 2009-05-27 Expounding on the results of the author's work with the US Army Research Office, DARPA, the Office of Naval Research, and various defense industry contractors, *Governing Lethal Behavior in Autonomous Robots* explores how to produce an artificial conscience in a new class of robots, humane-oids, which are robots that can potentially perform more ethically than humans in the battlefield. The author examines the philosophical basis, motivation, theory, and design recommendations for the implementation of an ethical control and reasoning system in autonomous robot systems, taking into account the Laws of War and Rules of Engagement. The book presents robot architectural design recommendations for Post facto suppression of unethical behavior, Behavioral design that incorporates ethical constraints from the onset, The use of affective functions as an adaptive component in the event of unethical action, and A mechanism that identifies and advises operators regarding their ultimate responsibility for the deployment of autonomous systems. It also examines why soldiers fail in battle regarding ethical decisions; discusses the opinions of the public, researchers, policymakers, and military personnel on the use of lethality by autonomous systems; provides examples that illustrate autonomous systems' ethical use of force; and includes relevant Laws of War. Helping ensure that warfare is conducted justly with the advent of autonomous robots, this book shows that the first steps toward creating robots that not only conform to international law but outperform human soldiers in their ethical capacity are within reach in the future. It supplies the motivation, philosophy, formalisms, representational requirements, architectural design criteria, recommendations, and test scenarios to design and construct an autonomous robotic system capable of ethically using lethal force. Ron Arkin was quoted in a November 2010 New York Times article about robots in the military.

The Battle of Bong Son Kenneth P. White, 2024-02-29 Operation Masher/White Wing targeted the regiments of the North Vietnamese Army Sao Vang Division operating in the Bong Son area in northeast Binh Dinh Province in central South Vietnam. The operation started on January 24, 1966, immediately after the Vietnamese New Year (Tet) and ended six weeks later. It was led by newly promoted Colonel Harold G. Moore, who as a lieutenant colonel

commanded the 1st Battalion, 7th Cavalry in the battle of Landing Zone X-Ray in the Ia Drang Valley two months earlier. In 41 days of sustained fighting, the 1st Cav battled each of the three regiments of the Sao Vang Division, resulting in enemy losses of more than 3,000 KIA. This came at the cost of 199 Americans killed on the battlefield and 46 more who died in the crash of a U.S. Air Force C-123 aircraft en route to the battlefield, making it one of the deadliest battles of the entire Vietnam War. Operation Masher/White Wing was a success. The 1st Cav demonstrated that it had the firepower, mobility, and leadership to find the enemy and deliver a severe blow to it in terms of personnel and equipment losses and in forced evacuation from formerly “secure” base areas, seemingly proving the value of the search-and-destroy strategy. However within a few weeks, intelligence reports indicated that North Vietnamese soldiers were returning to the Bong Son area in small groups. By late April, the Sao Vang Division was back in the area in force. Operation Masher/White Wing proved to be the start of a very long and deadly struggle between the 1st Cav and North Vietnamese for control of Binh Dinh Province—multiple search & destroy operations eventually resulted in more than 9,000 enemy KIA and 2,358 enemy detained, with friendly losses of more than 1,200 KIA, 5,775 WIA, and 27 MIA. While Masher/White Wing demonstrated that search & destroy operations were very effective at the tactical level but without a high-level strategy to stop the unabated flow of fresh Communist troops and supplies into South Vietnam, it wasn’t clear just how they contributed to overall victory. At the start of 1968, General Westmoreland ordered the 1st Cav to terminate its operations in the Bong Son area, bringing the battle to a close.

The Hunter Killers Dan Hampton, 2015-06-02 At the height of the Cold War, America's most elite aviators bravely volunteered for a covert program aimed at eliminating an impossible new threat. Half never returned. All became legends. From New York Times bestselling author Dan Hampton comes one of the most extraordinary untold stories of aviation history. Vietnam, 1965: On July 24 a USAF F-4 Phantom jet was suddenly blown from the sky by a mysterious and lethal weapon—a Soviet SA-2 surface-to-air missile (SAM), launched by Russian advisors to North Vietnam. Three days later, six F-105 Thunderchiefs were brought down trying to avenge the Phantom. More tragic losses followed, establishing the enemy's SAMs as the deadliest anti-aircraft threat in history and dramatically turning the tables of Cold War air superiority in favor of Soviet technology. Stunned and desperately searching for answers, the Pentagon ordered a top secret program called Wild Weasel I to counter the SAM problem—fast. So it came to be that a small group of maverick fighter pilots and Electronic Warfare Officers volunteered to fly behind enemy lines and into the teeth of the threat. To most it seemed a suicide mission—but they beat the door down to join. Those who survived the 50 percent casualty rate would revolutionize warfare forever. You gotta be sh*#@ing me! This immortal phrase was uttered by Captain Jack Donovan when the Wild Weasel concept was first explained to him. You want me to fly in the back of a little tiny fighter aircraft with a crazy fighter pilot who thinks he's invincible, home in on a SAM site in North Vietnam, and shoot it before it shoots me? Based on unprecedented firsthand interviews with Wild Weasel veterans and previously unseen personal papers and declassified documents from both sides of the conflict, as well as Dan Hampton's own experience as a highly decorated F-16 Wild Weasel pilot, *The Hunter Killers* is a gripping, cockpit-level chronicle of the first-generation Weasels, the remarkable band of aviators who faced head-on the advanced Soviet missile technology that was decimating fellow American pilots over the skies of Vietnam.

Autonomous Weapons Fouad Sabry, 2021-09-10 What Is Autonomous Weapons Lethal autonomous weapons are a type of autonomous military system that can independently search for and engage targets based on programmed constraints and descriptions, and may operate in the air, on land, on water, under water, or in space. History of the 101st Airborne Division Colonel Robert E. Jones, 2010-05-17 The History of the 101st Airborne Division is the epic story of the Division from its activation in August 1942 through the completion of Operation Desert Storm in April 1991. The Division's progression through the sky took decades of hard work and tens of thousands of dedicated soldiers. In World War II, the 101st became the first American troops to set foot in occupied France, when, on 6 June 1944, its paratroopers dropped behind enemy lines, clearing the way for the 4th Infantry Division landing on Utah Beach. The Division would become famous for its work in Holland during Operation Market Garden, and for its successful defense of Bastogne, Belgium, during the Battle of the Bulge. In Vietnam, the "Screaming Eagles" engaged in battle from 1965 to 1972, when they began their evolution to Air Mobile by deploying by helicopter. In the Gulf War, the Division fired the first shots of Operation Desert Storm by destroying Iraqi radar sites, and during ground war of the operation, they made the longest and largest air assault in history. In every engagement and during the training periods in between, the 101st Airborne Division has honored the words of its first commander, General William C. Lee, that it has a "rendezvous with destiny." This book is a fitting record of that history, and of the men who are proud to be called "Screaming Eagles."

Australia in the US Empire Erik Paul, 2018-04-27 This book argues that Australia is vital to the US imperial project for global hegemony in the struggle among great powers, and why Australia's deep dependency on the US is incompatible with democracy and the security of the country. The Australian continent is increasingly a contestable geopolitical asset for the US grand strategy and for China's economic and political expansionism. The election of Donald Trump to the US presidency is symptomatic of the US hegemonic crisis. The US is Australia's dangerous ally and the US crisis is a call for Australia to regain sovereignty and sever its military alliance with the US. Political realism provides a critical paradigm to analyse the interactions between capitalism, imperialism and militarism as they undermine Australian democracy and shift governmentality towards new forms of authoritarianism.

Adopting the Song of Expression: An Emotional Symphony within **Hunter Killer Aerial**

In a world taken by displays and the ceaseless chatter of instant interaction, the melodic beauty and mental symphony developed by the written word usually disappear into the backdrop, eclipsed by the persistent sound and disruptions that permeate our lives. But, situated within the pages of **Hunter Killer Aerial** an enchanting fictional prize filled with raw feelings, lies an immersive symphony waiting to be embraced. Constructed by an outstanding musician of language, that interesting masterpiece conducts visitors on a psychological trip, well unraveling the concealed melodies and profound impact resonating within each cautiously constructed phrase. Within the depths with this touching analysis, we will examine the book's central harmonies, analyze its enthralling writing design, and surrender ourselves to the profound resonance that echoes in the depths of readers' souls.
