The Language of Branding Dawn Lerman,Robert J. Morais,David Luna,2017-12-14 The Language of Branding: Theory, Strategies and Tactics shows marketers how to use language successfully to improve brand value and influence consumer behavior. Luna and Lerman are among only a few researchers who take a multidisciplinary perspective on the ways language influences how consumers act. Together with Morais, an anthropologist engaged in market research, they show how understanding the power of language can impact the essence – and sales – of a brand. The book covers the fundamentals of brand language and applications for an array of marketing initiatives. Readers will learn why brand language matters, how language is used in marketing, and how to build a brand strategy that capitalizes on the richness and complexity of language. This book includes real-world case histories that demonstrate vividly how brand language is created and exercises that enable both students of marketing and marketing professionals to apply the book's concepts and stimulate class discussion. The Language of Branding: Theory, Strategies and Tactics can be used in a number of courses, including consumer behavior, branding, advertising, linguistics, and communications.

Reviews in Computational Chemistry Kenny B. Lipkowitz, Raima Larter, Thomas R. Cundari, Donald B. Boyd, 2003-10-21 The Reviews in Computational Chemistry series bring together leading authorities in the field. The chapters in this book series are written to teach the newcomer and update the expert. Topics include computational chemistry, molecular modeling, computer-assisted molecular design (CAMD), quantum chemistry, molecular mechanics and dynamics, and quantitative structure-activity relationships (QSAR). Detailed author and subject indices on each volume help the reader to quickly discover particular topics. The chapters are approached in a tutorial manner and written in a non-mathematical style allowing students and researchers to access computational methods outside their immediate area of expertise.

Knapsack Problems Hans Kellerer, Ulrich Pferschy, David Pisinger, 2013-03-19 Thirteen years have passed since the seminal book on knapsack problems by Martello and Toth appeared. On this occasion a former colleague exclaimed back in 1990: How can you write 250 pages on the knapsack problem? Indeed, the definition of the knapsack problem is easily understood even by a non-expert who will not suspect the presence of challenging research topics in this area at the first glance. However, in the last decade a large number of research publications contributed new results for the knapsack problem in all areas of interest such as exact algorithms, heuristics and approximation schemes. Moreover, the extension of the knapsack problem to higher dimensions both in the number of constraints and in the number of knapsacks, as well as the modification of the problem structure concerning the available item set and the objective function, leads to a number of interesting variations of practical relevance which were the subject of intensive research during the last few years. Hence, two years ago the idea arose to produce a new monograph covering not only the most recent developments of the standard knapsack problem, but also giving a comprehensive treatment of the whole knapsack family including the siblings such as the subset sum problem and the bounded and unbounded knapsack problem, and also more distant relatives such as multidimensional, multiple, multiple-choice and quadratic knapsack problems in dedicated chapters.

Managing People in Commercial Kitchens Charalampos Giousmpasoglou, Evangelia Marinakou, Anastasios Zopiatis, John Cooper, 2022-01-17 *Managing People in Commercial Kitchens: A Contemporary Approach* uses original research to argue that senior managers (head chefs) should differentiate their people management practices in kitchen brigades from those used in the hospitality industry more generally (induction, socialisation, and performance evaluation) due to the group's strong occupational identity and culture. The understanding of chefs' work from a management perspective is critical for successful hospitality operations but has been historically under-researched. Chapters provide a detailed account of chefs' work in commercial kitchens from an HRM perspective. Using occupational identity and culture as a vehicle, this book explores the different aspects of managerial work in commercial kitchen settings: general management, leadership, education and training, skills and competencies, managing

deviant behaviour, managing stress, and managing diversity (focused on gender segregation). The final chapter looks at future perspectives on this unique working environment and the many challenges arising from the latest developments such as the COVID-19 pandemic. Providing both theoretical insights and practical applications with the use of case studies throughout, this will be of great interest to upper-level students and researchers in hospitality, as well as a useful reference for current managers in the field.

Handbook of Fuel Cells Wolf Vielstich, Hubert A. Gasteiger, Harumi Yokokawa, 2009-04-20 A timely addition to the highly acclaimed four-volume handbook set; volumes 5 and 6 highlight recent developments, particularly in the fields of new materials, molecular modeling and durability. Since the publication of the first four volumes of the Handbook of Fuel Cells in 2003, the focus of fuel cell research and development has shifted from optimizing fuel cell performance with well-known materials to developing new materials concepts, and to understanding the origins of materials and fuel cell degradation. This new two-volume set provides an authoritative and timely guide to these recent developments in fuel cell research.

The Badger, 1926 UW Archives holds up to three copies of each volume of the yearbook from its initial publication in 1884 to its final publication in 2014 (129 volumes). The publication of the yearbook did not become annual until 1887, as such there are no yearbooks for 1885 or 1886. The only other interruption in yearbooks was for the years 1973 and 1974. There are still yearbooks from these years, but they were published by the Wisconsin Alumni Association rather than the student body, as such they are spare, consisting mostly of portraits of students. UW Archives currently holds at least one copy of every published volume. The 1st copy of each volume is held onsite at UW Archives while the second and third copies, where they exist, are held offsite.

Automated Machine Learning Frank Hutter, Lars Kotthoff, Joaquin Vanschoren, 2019-05-17 This open access book presents the first comprehensive overview of general methods in Automated Machine Learning (AutoML), collects descriptions of existing systems based on these methods, and discusses the first series of international challenges of AutoML systems. The recent success of commercial ML applications and the rapid growth of the field has created a high demand for off-the-shelf ML methods that can be used easily and without expert knowledge. However, many of the recent machine learning successes crucially rely on human experts, who manually select appropriate ML architectures (deep learning architectures or more traditional ML workflows) and their hyperparameters. To overcome this problem, the field of AutoML targets a progressive automation of machine learning, based on principles from optimization and machine learning itself. This book serves as a point of entry into this quickly-developing field for researchers and advanced students alike, as well as providing a reference for practitioners aiming to use AutoML in their work.

The Handbook of Attitudes, Volume 1: Basic Principles Dolores Albarracin, Blair T. Johnson, 2018-10-10 Attitudes are evaluations of people, places, things, and ideas. They help us to navigate through a complex world. They provide guidance for decisions about which products to buy, how to travel to work, or where to go on vacation. They color our perceptions of others. Carefully crafted interventions can change attitudes and behavior. Yet,

attitudes, beliefs, and behavior are often formed and changed in casual social exchanges. The mere perception that other people favor something, say, rich people, may be sufficient to make another person favor it. People's own actions also influence their attitudes, such that they adjust to be more supportive of the actions. People's belief systems even change to align with and support their preferences, which at its extreme is a form of denial for which people lack awareness. These two volumes provide authoritative, critical surveys of theory and research about attitudes, beliefs, persuasion, and behavior from key authors in these areas. The first volume covers theoretical notions about attitudes, the beliefs and behaviors to which they are linked, and the degree to which they are held outside of awareness. It also discusses motivational and cultural determinants of attitudes, influences of attitudes on behavior, and communication and persuasion. The second volume covers applications to measurement, behavior prediction, and interventions in the areas of cancer, HIV, substance use, diet, and exercise, as well as in politics, intergroup relations, aggression, migrations, advertising, accounting, education, and the environment.

Yeast Stress Responses Stefan Hohmann, Willem H. Mager, 2007-10-23 Every cell has developed mechanisms to respond to changes in its environment and to adapt its growth and metabolism to unfavorable conditions. The unicellular eukaryote yeast has long proven as a particularly useful model system for the analysis of cellular stress responses, and the completion of the yeast genome sequence has only added to its power. This volume comprehensively reviews both the basic features of the yeast general stress response and the specific adaptations to different stress types (nutrient depletion, osmotic and heat shock as well as salt and oxidative stress). It includes the latest findings in the field and discusses the implications for the analysis of stress response mechanisms in higher eukaryotes as well.

Myocardial Preconditioning Cherry L. Wainwright, James R. Parratt, 2013-11-22 This book is about the unique ability of the heart to protect itself against the serious consequences of an abrupt reduction in blood flow to the myocardium - a phenomenon which is switched on by stress and termed myocardial preconditioning. This volume describes the main features and characteristics of preconditioning, with respect to the time-course of the protective effect of the phenomenon (first and second windows) and the different sequelae of myocardial ischaemia against which it protects, such as myocardial injury, arrhythmias and contractile dysfunction. The proposed mechanisms underlying the fascinating form of cardioprotection are discussed. Among these are the role of endogenous labile mediators, receptor-linked G proteins, ATP-sensitive potassium channels and protein kinase C activation.

Advances in Electronic Materials for Clean Energy Conversion and Storage Applications Aftab Aslam Parwaz Khan, Mohammed Nazim, Abdullah M. Asiri, 2023-03-24 Advances in Electronic Materials for Clean Energy Conversion and Storage Applications reviews green synthesis and fabrication techniques of various electronic materials and their derivatives for applications in photovoltaics. The book investigates recent advances, progress and issues of photovoltaic-based research, including organic, hybrid, dye-sensitized, polymer, and quantum dot-based solar

cells. There is a focus on applications for clean energy and storage in the book. Clean energy is defined as energy derived from renewable resources or zero-emission sources and natural processes that are regenerative and sustainable resources such as biomass, geothermal energy, hydropower, solar and wind energy. Materials discussed include nanomaterials, nanocomposites, polymers, and polymer-composites. Advances in clean energy conversion and energy storage devices are also reviewed thoroughly based on recent research and developments such as supercapacitors, batteries etc. Reliable methods to characterize and analyze these materials systems and devices are emphasized throughout the book. Important information on synthesis and analytical chemistry of these important systems are reviewed, but also material science methods to investigate optical properties of carbon-nanomaterials, metal oxide nanomaterials and their nanocomposites. Reviews the latest advances in electronic materials synthesis, fabrication and application in energy Discusses green, cost-effective, simple and large-scale production of electronic materials Includes critical materials and device characterization techniques that enhance our understanding of materials' properties and measure device performance

Ways & Power Of Love Pitirim A. Sorokin, 2002-03-04 *The Ways and Power of Love* was originally published in 1954 when Pitirim Sorokin was in the twilight of his career and leading the Harvard Research Center in Creative Altruism. His elaborate scientific analysis of love with regard to its higher and lower forms, its causes and effects, its human and cosmic significance, and its core features constitutes the first study on this topic in

world literature to date. Sorokin was the one absolutely essential twentieth-century pioneer in the study of love at the interface of science and religion. Bringing *The Ways and Power of Love* back into print allows a new generation of readers to appreciate Sorokin's genius and to move forward with his endeavor at a time when civilization itself continues to be threatened by a marked inability to live up to the ideal of love for all humankind. It is certainly right to hope, with Sorokin, that progress in knowledge about love can move humanity forward to a better future. Turning the sciences toward the study of love is no easy task, but it can and must be done.
