The Hawke Papers Ruddock F. Mackay, 2016-12-05 Edward Hawke (1705-1781) had a long and distinguished career in the Royal Navy, serving for over half a century and finally becoming First Lord of the Admiralty. This book is a selection of his papers chosen from between 1743 and 1771, providing information on every significant stage in Hawke's career combined with a connected sequence of documents for the outstanding campaign of 1759-60 during the Seven Years War. His peacetime command at Portsmouth between 1748 and 1754 is also documented together with his post of First Lord from which he retired in 1771. Hawke has been the

greatest naval commander of his generation, of whom Horace Walpole wrote 'Lord Hawke is dead and does not seem to have bequeathed his mantle to anybody'. This volume brings together papers to and from Hawke; the sources are the Public Record Office, the National Maritime Museum and the British Library.

Adhesives, Sealants, and Coatings for Space and Harsh Environments Lieng-Huang Lee,2013-03-13 New technologies constantly generate new demands for exotic materials to be used in severe environments. The rapid developments of aerospace industries during the last two decades have required new materials to survive extreme high and low temperatures and various radiations. The exploration of new energy sources, e.g., solar and geothermal, has led us to develop new solar collectors and geothermal devices. Even the search for new oils has demanded that we study the corrosive environment of oil fields. In the telecommunication industries, optical fibers have been adopted broadly to replace metallic conductors. However, none of the optical fibers can survive abrasion or corrosion without the application of a coating material. For microelectronics, protection in terms of coatings and encapsulants is deemed necessary to prevent corrosion. One of the major causes of corrosion has been shown to be water which appears to be abundant in our earthly environments. Water can attack the bulk adhesive (or sealant), the interface, or the adherend. Water can also cause delamination of coating film, and it is definitely the major ingredient in causing cathodic or anodic corrosion. Thus, water becomes the major obstacle in solving durability problems of various materials in harsh environments.

Olduvai Gorge, 1951-1961: Excavations in beds I and II, 1960-1963 Louis Seymour Bazett Leakey,Mary Douglas Leakey,1965 At Olduvai Gorge in northern Tanzania natural erosion exposed a series of superimposed geological beds containing rich artefacts and fossil assemblages spanning the last 1.8 million years. The site is famous for the excavations conducted there since 1951 under the direction of Mary Leakey and her husband. This book records the archaeological finds in the upper part of the Olduvai Gorge sequence, covering the period 1.2 to 0.4 million years ago, and includes artefacts and faunal remains excavated from sites in Beds III, IV and the Masek Beds. Mary Leakey's analysis is supported by chapters from other authors summarising the geological background and providing detailed analyses of the manufacture and use of tools found on the site.

Rocketing Into the Future Michel van Pelt,2012-05-30 This book describes the technology, history, and future of rocket planes. Michel van Pelt journeys into this exciting world, examining the exotic concepts and actual flying vehicles that have been devised over the last hundred years. He recounts the history of rocket airplanes, from the early pioneers who attached simple rockets onto their wooden glider airplanes to the modern world of high-tech research vehicles. The author visits museums where rare examples of early rocket planes are kept and modern laboratories where future spaceplanes are being developed. He explains the technology in an easily understandable way, describing the various types of rocket airplanes and looking at the possibilities for the future. Michel van

Pelt considers future spaceplanes, presenting various modern concepts and developments. He describes the development from cutting edge research via demonstrator vehicles to operational use. He also evaluates the replacement of the Space Shuttle with a seemingly old-fashioned capsule system, the parallel developments in suborbital spaceplanes such as SpaceShipOne and SpaceShipTwo, piloted versus automatic flight, and related developments in airliners and military aircraft.

The Keep Jennifer Egan, 2007-07-10 NATIONAL BESTSELLER • Part horror tale, part mystery, part romance ... utterly fantastic.”—O, The Oprah Magazine • The bestselling, award-winning author of *A Visit from the Goon Squad* brilliantly conjures a world from which escape is impossible and where the keep—the tower, the last stand—is both everything worth protecting and the very thing that must be surrendered in order to survive. Two cousins, irreversibly damaged by a childhood prank, reunite twenty years later to renovate a medieval castle in Eastern Europe. In an environment of extreme paranoia, cut off from the outside world, the men reenact the signal event of their youth, with even more catastrophic results. And as the full horror of their predicament unfolds, a prisoner, in jail for an unnamed crime, recounts an unforgettable story that seamlessly brings the crimes of the past and present into piercing relation.

Margins of Reality Robert G. Jahn, Brenda J. Dunne, 2009-04 WHAT HAS MODERN SCIENCE SWEPT UNDER THE RUG? This pioneering work, which sparked intense controversy when it was first published two decades ago, suggests that modern science, in the name of rigor and objectivity, has arbitrarily excluded the role of consciousness in the establishment of physical reality. Drawing on the results of their first decade of empirical experimentation and theoretical modeling in their Princeton Engineering Anomalies Research (PEAR) program, the authors reach provocative conclusions about the interaction of human consciousness with physical devices, information-gathering processes, and technological systems. The scientific, personal, and social implications of this revolutionary work are staggering. MARGINS OF REALITY is nothing less than a fundamental reevaluation of how the world really works.
