

Ilyushin Il-28 Beagle Yefim Gordon,Dmitri Komissarov,2002 Entering service with the USSR Air Force in 1950, the Ilyushin IL-28 Beagle has been dubbed 'The Russian Canberra.' This is the first in-depth study of the long-serving light bomber. Besides the USSR, it served with the air forces of Egypt, China, Czechoslovakia and Poland. The aircraft had a maximum speed of 600 mph at sea level and 515 mph at 36,000 feet. IL-28 was armed with two, fixed forward-firing 23-mm cannons and two, 23-mm cannons in a manually-directed tail position.Hardcover, 7-1/2 x 9-1/2, 224 pp, 24 color, 162 b/w and 36 line drawings

Aeroplane Adam Bialek,2021-04-08 Photographic documentation of the aircraft, with visible details of the external construction elements. The album contains only photos. There is no text or description in the album. IL-28. Reconnaissance plane, 1950, USSR. Span 22.65 m (with additional fuel tanks) Length 17.65 m Take-off weight (nominal) 19,500 kg Maximum speed 876 km/h Ceiling 12,300 m Range 3150 km Armament Powerplant: 2 x VK-1, rated at 2700 kG (2646 kW) The aeroplane was designed as a high wing, twin engine bomber, with a nose wheel. The crew was limited to three men: pilot, navigator/bombardier and rear gunner/radio operator. There were two pressurised compartments, increasing the crew's comfortable working environment in high altitudes. Under the straight leading edges, two engine nacelles with main undercarriage wheel bays were assembled. Swept vertical and horizontal stabilisers allowed for keeping appropriate steering and stability at high speeds. Armament consisted of a 3000kg maximum bomb load, carried in the fuselage inner bomb bay and four 23mm cannons - two fixed in front, on the both sides of fuselage and twin movable cannons at the rear. The first Il-28 bombers reached Soviet air regiments at the beginning of 1950 and gained recognition among the flying personnel for its outstanding flying characteristics. The ground crews valued the aircraft for its access to engines and other equipment. Along with the Il-28, a reconnaissance version was developed. It was flown in April 1950, and was intended for night or day use, tactical and operational reconnaissance. The aircraft's bomb bay was adopted to carry different cameras, photo flash bombs, flares and fuel tanks. Additional fuel tanks were attached at the wing tips. The Il-28R was armed with three 23mm cannons. In the following years the Il-28 was utilised for radio reconnaissance

and electronic warfare (passive and active jamming of enemy electronics). The Il-28 aircraft were in service in many countries. They were also engaged in some military conflicts.

Cytokine Gene Polymorphisms in Multifactorial Conditions Koen Vandebroek,2006-06-21 The

literature on cytokine genetics is vast, so vast that it is now practically beyond the time or logistical constraints of most scientists to successfully keep pace with it. A compilation of the latest research, Cytokine Gene Polymorphisms in Multifactorial Conditions brings together, reviews, and structures up-to-date information on polymorphisms in cytokine genes. It discusses haplotype structures and linkage disequilibrium patterns in cytokine gene loci; functional biological effects of polymorphisms; and genetic associations with disease. The book documents polymorphisms in the most important cytokine genes, or gene clusters, and their biological and genetic effects in a multitude of distinct multifactorial conditions. Unique to this book are the disease-centered chapters examining the role of cytokine gene polymorphisms in a multitude of multifactorial conditions. The conditions include autoimmune or chronic inflammatory diseases, cardiovascular disease, infectious diseases, and longevity. This section is a real tour de force (Grant Gallagher and Michael F. Seldin, March 2006). Broadening the understanding of the effect of genetic variations on human immune responses, the organization, scope, and content of this book make it a valuable and easily accessible resource. The book integrates genetic, immunological, and clinical information and will serve as a reference for novice and expert geneticists, immunologists, cell biologists and clinicians. It is a must for everyone involved in, or planning, cytokine genetics or immunogenetics studies.

Oxford Textbook of Psoriatic Arthritis Oliver FitzGerald,Dafna Gladman,2018-06-14 Psoriatic

arthritis, or PsA, is now acknowledged the second most prevalent and important inflammatory arthropathy worldwide. The addition of this new textbook on PsA is a fitting and important inclusion to

the Oxford Textbooks in Rheumatology series, written to reflect the significant advances in the field in recent years. With the recent advances in the understanding of pathogenesis, and the development of novel therapies, the Oxford Textbook of Psoriatic Arthritis provides a comprehensive overview of the disease. Each chapter is written by leading clinicians and scientists in the field of psoriatic arthritis, to provide a contemporary view of PsA, and a look into the future directions of research. Covering everything from epidemiology and diagnosis to genetics and pathology, detailed sections on treatment and outcomes provide an invaluable resource for the clinician. The book is also highly illustrated with both clinical images such as x-rays and histological photographs to aid clinical knowledge, and diagrams of the immunology and genetics that underlie the disease. Practical and all-inclusive, with summary boxes to distil the most important information, the Oxford Textbook of Psoriatic Arthritis will prove an invaluable resource for rheumatologists, dermatologists, trainees, and all members of the multidisciplinary team who are interested in recent advances in PsA.
