Civil Aircraft Recognition Paul Eden, 2012-12-21 The perfect guide for spotters and enthusiasts interested in airliners, feederliners, executive jets, light aircraft and other commercial aeroplanes. Contains 3-view silhouettes, colour photographs, dimensions, technical specifications and a potted history of those aircraft most likely to be seen in the skies and at airports. Other helpful details are included to make aircraft identification more certain.

**Soviet-Era Airliners** Christopher Buckley, 2022-06-20 When the Soviet Union fell in December 1991, there were close to 3,500 assorted Soviet-built airliners that could be deemed operational – more than there had ever been before. The vast majority of these Antonovs, Ilyushins, Tupolevs, and Yaks flew for Aeroflot, and were scattered far and wide at bases across the Soviet Union. Thirty years later, they have almost all disappeared. Now dominated by state-of-the-art Airbuses and Boeings, the world's airports and airways will never be the same again without the noise, smoke and charisma of these iconic designs from Soviet times. This book follows the fortunes of the great Soviet airliners over the last three decades and looks at what happened to this immense fleet: the fragmentation of Aeroflot into a myriad of new operators in the 1990s, the bankruptcies and consolidation of so many airlines that followed, and then the slow, inevitable disappearance of these aircraft from our skies. Illustrated with 220 photographs, most of which have never been published before, and supported by many anecdotes, facts and figures, this book conveys the nostalgia and wonder of this special, tumultuous time in aviation history.

The Arms Production Dilemma Randall Forsberg, 1994 The studies show how military strategy, planned forces, and the age of systems in the current inventory affect the domestic demand for new production; how the recent drop in domestic demand affects arms industries; and the extent to which governments and firms in the arms-producing nations are turning to exports to sustain the industries. In the shrinking arms market of the post-Cold War era, countries with advanced arms industries face difficult choices concerning force size, arms production, arms export, and defense industrial capacity. This book explores the links among these issues through a detailed study of the combat aircraft industries in the United States, Russia, Britain, France, Germany, Italy, and Sweden--the seven countries that develop, produce, and export all of the world's technologically advanced weapon systems. The studies show how military strategy, planned forces, and the age of systems in the current inventory affect the domestic demand for

new production; how the recent drop in domestic demand affects arms industries; and the extent to which governments and firms in the arms-producing nations are turning to exports to sustain the industries. Stunning changes in Russia's combat aircraft forces, industry, and strategy are detailed here for the first time, as are expected future Russian combat aircraft exports to China. Newly compiled data also show that in the United States and Russia and globally, arms production for export will exceed production for domestic use for the first time in history, starting in 1995. Arms production is thus increasingly dominated by commercial rather than security interests. Ultimately at issue is whether governments will exploit the opportunity offered by the dramatic post-Cold War contraction of the world arms market to reduce their armed forces and constrain international arms trade while shrinking the arms industry--or keep pushing arms exports that generate new threats and justify larger armed forces, more arms production, and bigger arms industries.

**A Century of Aviation** P. E. (Retired) Slagley, 2011-07-01 Fascinating, informative and insightful, A Century of Aviation: Worldwide Commercial and Military offers a comprehensive overview of the development of aircraft for over 100 years. With an emphasis on the war periods, from World War I through the present, this is a book that is required reading for any fan of flying. The rich history and inventive advancements in the world of aviation comes alive in this thoroughly enjoyable volume. George E. Slagley, P.E. (Retired) grew up on a farm in Clay County, Illinois and currently resides in Greenville, Alabama. He spent four years in the Navy as an aircraft mechanic on two Aircraft Carriers. He also served in the Navy Reserve for eight years as a Flight Engineer. Mr. Slagley joined the Army, first as a technician, and then received his degree in Aircraft Maintenance Engineering, which converted his position to Supervisory General Engineer. Mr. Slagley graduated from Parks College of St Louis University in December 1969 with a BS and a MBA from Webster University in 1976. He received certification as a Professional Engineer (P.E.) from California. He was a past President of the Alabama Society of Professional Engineers, The TRADOC Professional Engineer of the Year in 1984, and the Alabama Professional Engineer Of the Year 1993/1994. Mr. Slagley spent ten years as an Aerospace Engineer, Technical Advisor (Consultant) at Ft. Rucker, Alabama, and then spent nine years in a business at Dothan, AL where he received The Who's Who in the World certification. <http://sbpra.com/GeorgeESlagle>

**Composite Manufacturing Technology** A.G. Bratukhin, V.S. Bogolyubov, 2012-12-06 Some years ago in Paisley (Scotland) the International Conference on Composite Materials, headed by Professor I. Marshall, took place. During the conference, I presented a paper on the manufacturing and properties of the Soviet Union's composite materials. Soviet industry had made great achievements in the manufacturing of composite materials for aerospace and rocket applications. For example, the fraction of composites (predominantly carbon fibre reinforced plastics) in the large passenger aircrafts Tu-204 and 11-86 is 12-15% of the structure weight. The percentage by weight share of composites in military aircraft is greater and the fraction of composites (organic fibre reinforced plastics) used in military helicopters exceeds a half of the total structure weight. The nose parts of most rockets are produced in carbon-carbon materials. In the Soviet spacecraft 'Buran' many fuselage tubes are made of boron-aluminium composites. Carbon-aluminium is used for space mirrors and gas turbine blades. These are just a few examples of applications. Many participants at the Paisley conference suggested that the substantial Soviet experience in the field of composite materials should be distilled and presented in the form of a comprehensive reference publication. So the idea of the preparation and publication of a six volume work Soviet Advanced Composites Technology,

edited by Professor I. Marshall and me, was born.

Starting Something Big Robert V. Garvin, 1998 Written by a former, long-time international manager of General Electric Company, this volume offers a history of the political and market forces affecting the engine industry, GE's role in the changes, and how GE converted itself from military to commercial markets, with conclusions drawn for potential investors in the industry. Moving Boxes by Air Peter S. Morrell, 2016-04-22 Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. For some network combination carriers it accounts for up to half of total tonne-kms flown, and as much as one quarter of total revenue. In addition, the integrated carriers such as DHL, FedEx and TNT have their own fleets of dedicated freighter aircraft, and cargo aircraft operators like Cargolux and Nippon Cargo have a specialist role in the industry. Featuring expert analysis and worked examples to enhance understanding, *Moving Boxes by Air* by Peter Morrell offers a comprehensive and up-to-date guide to the business and practices of air cargo, with a chapter dedicated to each key issue, such as: current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts.

**Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries** Shmelova, Tetiana, Sikirda, Yuliya, Sterenharz, Arnold, 2019-10-11 With the emergence of smart technology and automated systems in today's world, artificial intelligence (AI) is being incorporated into an array of professions. The aviation and aerospace industry, specifically, is a field that has seen the successful implementation of early stages of automation in daily flight operations through flight management systems and autopilot. However, the effectiveness of aviation systems and the provision of flight safety still depend primarily upon the reliability of aviation specialists and human decision making. The *Handbook of Research on Artificial Intelligence Applications in the Aviation and Aerospace Industries* is a pivotal reference source that explores best practices for AI implementation in aviation to enhance security and the ability to learn, improve, and predict. While highlighting topics such as computer-aided design, automated systems, and human factors, this publication explores the enhancement of global aviation security as well as the methods of modern information systems in the aeronautics industry. This book is ideally designed for pilots, scientists, engineers, aviation operators, air crash investigators, teachers, academicians, researchers, and students seeking current research on the application of AI in the field of aviation.
