*Famous Russian Aircraft: Ilyushin Il-28* E. Gordon, Yefim Gordon, Dmitriy Komissarov, 2015 The Il-28 tactical bomber was a success in all its roles. From Torpedo-bomber, reconnaissance, trainer, and mail carrier, numerous specialized versions were also developed, including testbeds for avionics, weapons, and aircraft systems. A true fighting machine, by the mid 1950s it became the main strike aircraft of the Soviets and later saw action in various armed conflicts in the Middle East, Asia and Africa.

*Ilyushin Il-28 Beagle* Yefim Gordon, Dmitrii Komissarov, 2002 Entering service with the USSR Air Force in 1950, the Ilyushin IL-28 Beagle has been dubbed 'The Russian Canberra.' This is the first in-depth study of the long-serving light bomber. Besides the USSR, it served with the air forces of Egypt, China, Czechoslovakia and Poland. The aircraft had a maximum speed of 600 mph at sea level and 515 mph at 36,000 feet. IL-28 was armed with two, fixed forward-firing 23-mm cannons and two, 23-mm cannons in a manually-directed tail position. Hardcover, 7-1/2 x 9-1/2, 224 pp, 24 color, 162 b/w and 36 line drawings

**Ilyushin IL-18/20/22** Yefim Gordon, Dmitriai Komissarov, 2004 8 1/2 x 11, 260 color & b&w photos Developed as a high-capacity long-range airliner for use on Aeroflot's busiest routes, the Ilyushin IL-18 four-turboprop airliner first flew on July 4th, 1957. Despite some initial difficulties, this Soviet equivalent of the Lockheed Electra eventually proved to be extremely successful, offering high comfort and good operating economics for its day. The IL-18 was supplied to many friendly nations in Eastern Europe, Asia, Africa, the Middle East and the Caribbean. Its uses included passenger and cargo carriage, VIP transportation, support of Soviet research stations in Antarctica, electronic espionage and various research and development programs, both civil and military. This book charts the development history of the IL-18. It also provides information on an earlier piston-engined airliner of the same name which turned out to be ahead of its time and was destined never to enter production. It also describes all the principal commercial versions as well as test and development aircraft. Separate chapters are dedicated to aircraft in the IL18 family which bore separate designations, such as the IL-20M ELINT, the IL-20RT space tracker, the IL-22 airborne command post, the IL-24N ice reconnaissance aircraft used to support commercial shipping operations in the Arctic regions and the IL-38 anti-submarine warfare aircraft.

Ilyushin IL-76 Yefim Gordon, Dmitriy Komissarov, Sergey Komissarov, 2001 A familiar sight both in military and worldwide commercial use, the Ilyushin IL-76 was the Soviet's answer to the Lockheed Starlifter. Compiled by noted Russian aviation writers and historians from a wealth of first-hand Russian sources, this book is a comprehensive history of each variant and its service. Extensive tables detail each aircraft built with complete notes on every operator-both civil and military-and their fleets. For military enthusiasts and modelers.

Polish Wings No. 33 Ilyushin Il-2 Wojciech Zmyslony, 2023-08-15 The renowned Soviet attack aircraft Il-2 and its various models within the Polish Air Force have been extensively documented with unmatched detail. This publication comprises numerous unpublished photographs obtained from private collections, along with a series of specially commissioned color profiles that illustrate and describe the color schemes and markings used. The book is composed of 96 pages and contains a total of 52 color profiles.

Ilyushin Il-2 Yefim Gordon, Sergey Komissarov, 2010 This is the definitive history of the Ilyushin Il-2 Sturmovik and provides detailed coverage on every aspect of this famous warplane. This is perhaps the most famous aircraft in the history of Russian and Soviet aviation. During World War 2 this rugged ground attack aircraft was arguably the Soviets' most effective weapon. Protected by its heavy armor, the low-flying aircraft was incredibly difficult to shoot down, and its powerful array of weaponry included a cannon, machine guns, rockets, and special HEAT antitank bombs. It was capable of penetrating the armor of every German tank in the field at the time, including the Panther and Tiger tanks, as well as reaping destruction among the ranks of enemy infantry on the ground. The Il-2 was so successful that the design was produced in greater numbers than any other military aircraft in history, with over 40,000 being built between 1941 and 1955.

**OKB Ilyushin** Yefim Gordon, E. Gordon, Dmitriy Komissarov, Sergey Komissarov, 2004 Established in 1934, the Ilyushin design bureau is one of the best-known Soviet/Russian aircraft design companies. Over the years, the Ilyushin OKB has developed aircraft for widely varying roles. Its first aircraft to achieve production status, the DB-3 bomber, entered service in 1936. The IL-2 (Shturmovik) armored attack aircraft brought Ilyushin well-earned fame; this aircraft fought with considerable success during World War II. The OKB's involvement with combat aircraft continued with the experimental IL-22 four-jet counterpart of the English Electric Canberra. However, it was those years that marked the OKB's transition to transport aircraft from the twin-engined IL-12 of 1945 developed as a 'DC-3 replacement', followed by many successful aircraft, including the four-turboprop IL-18 airliner (1957), the four-turbofan long-half IL-62 (1961), the IL-76 military/civil freighter (1971) and the first Soviet wide-body airliner, the IL-86 of 1976. The company has also moved into general aviation with the IL-103 four-seater.

Airbus A380 Robert Jackson,Glen Ashley,2021-07-30 “A great addition to the highly popular Flight Craft Series. This book reviews the history of . . . an iconic and important aircraft in civil aviation.” —Firetrench On April 27 2005, an aircraft under the power of six massive Rolls-Royce Trent 900 turbofan engines was making its first flight, and it was making history. For this was the Airbus A380, the largest passenger aircraft in the world. With air traffic continuing to double every fifteen years, the A380 was designed by Airbus Industrie to meet the needs of the passengers and airports, while also delivering the level of efficiency necessary to protect the environment for future generations. The design incorporated two full-length decks with wide-body dimensions, meaning its two passenger levels offered an entire deck’s worth of additional space compared to the next largest twin-engine jetliner. With more seats than any other aircraft, the A380 offered solutions to overcrowding; needing fewer journeys to carry 60 percent more passengers, making it the perfect solution to airport congestion, fleet planning optimization and traffic growth. Typical seating capacity was 525, although the aircraft was certified to carry up to 853 passengers. Production of the A380 peaked at thirty aircraft per year in 2012 and 2014. Then, in February 2019, the biggest customer, Emirates, announced that it was to reduce its latest order by thirty-nine aircraft in favour of two other Airbus Models, the A350 and A330neo, a version using the same engines as the Boeing 787 Dreamliner. For Airbus, it was the last act. The Company announced that production of the A380 would cease by 2021. “Full of great information.” —Airport Spotting

One Hundred Years of Air Power and Aviation Robin Higham,2003 In this precise, interpretive and informative volume, Higham looks at everything from the roots of strategic bombing and tactical air power to the lessons learned and unlearned during the invasion of Ethiopia, the war in China and the Spanish Civil War. He also considers the problems posed by jet aircraft in Korea and the use of Patriot missiles in the Persian Gulf. He covers anti-guerrilla operations, doctrine, industrial activities and equipment, as well as the development of commercial airlines.

**Civil Aviation and the Globalization of the Cold War** Peter Svik,2020-08-10 This book focuses on the highly complex and intertwined relationship between civil aviation, technological globalization and Cold War politics. It explores how the advancement of Soviet civil aircraft engineering during the 1950s technically triggered the globalization of the Cold War. The study also shows how the processes of technological standardization facilitated transfers of technology and knowledge across the Iron Curtain and how East-West as well as East-South connections evolved. It uncovers the motives and reasons for this transfer of knowledge and expertise, and aims to identify the specific roles played by states, international organizations and interpersonal networks. By taking a global approach to this history, the book advances ongoing debates in the field. It reassesses Europe’s role in the Cold War, pointing out the substantial differences in how Western Europe and the United States viewed the Communist world. This book will be of interest to scholars of international history, the history of technology and Cold War history.
