**The Immunoglobulin FactsBook** Marie-Paule Lefranc, Gerard Lefranc, 2001-05-23 The FactsBook series has established itself as the best source of easily accessible and accurate facts about protein groups. Books in the series use an easy-to-follow format and are meticulously researched and compiled by experts in the field. The Immunoglobulin FactsBook is the first published reference for all 203 human functional and ORF immunoglobulin genes. It is complete and standardized and employs nomenclature approved by the HUGO Nomenclature Committee.

**Janeway's Immunobiology** Kenneth Murphy, Paul Travers, Mark Walport, Peter Walter, 2010-06-22 The Janeway's Immunobiology CD-ROM, Immunobiology Interactive, is included with each book, and can be purchased separately. It contains animations and videos with voiceover narration, as well as the figures from the text for presentation purposes.

**The Immunoglobulins** Roald Nezlin, 1998-05-06 This book provides comprehensive up-to-date information on the structure and function of immunoglobulins. It describes the basic features of these molecules, which assists the reader in understanding how they function as an integral part of the immune system. The Immunoglobulins describes the localization and structure of different binding sites of immunoglobulin molecules, including the antigen-binding site, on the basis of latest x-ray crystallography studies. It discusses recently developed biotechnological methods that allow scientists to obtain fully active antibody molecules in vitro even without immunization and to construct new variants of immunoglobulins and their fragments by fusing with various other active molecules. A survey of recent knowledge on immunoglobulin-binding molecules other than antigens and on flexibility of immunoglobulin molecules concludes the discussion of functional aspects of the problem. Describes recent reviews on the structure and function of immunoglobulin molecules of various species Summarizes in detail recent findings on the fine structure of the antigen-combining site Presents comparative data on the antigen-recognizing sites of other molecules such as MHC proteins and T-cell receptors Summarizes growing data on immunoglobulin binding sites responsible for the reaction of immunoglobulins with molecules other than antigens Explores the rapid advance of recent biotechnological methods used for the construction of antibody molecules and their fragments with new properties Presents extensive references and is lavishly illustrated

**Mucosal Immune Defense: Immunoglobulin A** Charlotte S. Kaetzel, 2007-10-04 This key work in the field draws on a broad spectrum of molecular biologic, biochemical, and immunogenetic approaches in combination with human and murine in vitro cell culture and in vivo model systems to address questions in mucosal immunity. Humans produce more immunoglobulin A (IgA) than all other antibody isotypes combined. This book is designed to serve as a concise reference of the present knowledge of the biology of IgA.

*Immunoglobulin Therapy in the 21st Century: The Dark Side of the Moon* Isabella Quinti, Marcella Visentini, Albert Farrugia, 2015-11-20 In the early decades since the introduction in the early '80s of immunoglobulin therapy many studies tried to identify which clinical indications might benefit from the therapy, which treatment's schedules are effective and safe. It is universally accepted that immunoglobulin therapy is a life-saving treatment in patients with PID. The rise of new indications for further different clinical conditions resulted in a steady increase in demand for immunoglobulins. Currently the consumption of immunoglobulin for PID represents a small fraction of the market. In the recent past we have been observing: 1) An increase in the demand for plasma and in the consequent need to increase the number of donors; 2) Changes in methods to improve IgG recovery and to increase productivity as a response to growing clinical demand; 3) Introduction of immunoglobulin treatments with higher concentration; 4) Changes in the timing of administration with an increase in the rate of infusion; 5) Introduction of immunoglobulin treatment administered subcutaneously mainly confined initially to patients with PID and later extended to other clinical indications which often require higher volumes of infusion. Doctors following patients with PID were initially alarmed only to a possible risk of shortage. More relevant and less discussed appear the possible consequences of: 1) the risk of an improper transfer of information on treatments from a clinical indication to another. In particular, the idea of a mere replacement function in patients with PID might possibly be borrowed from the model of other clinical conditions requiring a replacement such as haemophilia. In PID, immunoglobulin treatment instead is obviously replacing a missing feature. However, other immune alterations are responsible for the large number of PID-associated diseases including inflammatory manifestations and tumors, common causes of morbidity and mortality. The immunomodulatory effects of immunoglobulin administered at replacement dosages on multiple cells and immune system functions are still largely to be checked in in vitro studies and in vivo. 2) the changes in the immunoglobulin production and schedules of administration. These should have been assessed in studies of drug surveillance, necessary in order to evaluate on large numbers of what it is initially reported on patients enrolled in the pivotal clinical trials, usually in the absence of most of the main disease-associated clinical conditions affecting pharmacokinetics, efficacy and tolerability. Severe side effects are now more frequently reported. This requires surveillance studies in order to verify the tolerability. Nowadays, personalized health research presents methodologic challenges, since emphasis is placed on the individual response rather than on the population. Even within a universally accepted indication, such as in PID, the identification of prognostic markers should guide the therapeutic intervention. 3) the risk of a decrease in the surveillance and monitoring of PID-associated clinical conditions. In fact, self-administration of immunoglobulins administered subcutaneously increased the independence of a number of patients. On the other hand, it led to the reduction in the number of contacts between specialized centers and patients who often require a close monitoring of disease-associated conditions. A wide debate between experts is necessary to afford the new challenge on immunoglobulin usage.

**The Immunoglobulin a System** Jiri Mestecky, 2013-11-11 The International Symposium on the Immunoglobulin A System was organized in observance of the twenty-fifth anni versary of the School of Dentistry of the University of Ala bama in Birmingham. Immunoglobulin A was chosen as the sub ject of the Symposium because of its broad scope in relation to all biologic sciences, as well as for its particular rele vance to prevention of the most common human disease--dental caries. More than 500 scientists, from 13 countries, met in Birmingham, Alabama to review critically past and current research on IgA and to outline goals for integrating future investigations of the many facets of the IgA system. It is our pleasure to express sincere appreciation to the following, whose efforts made the Symposium possible: to Dr. Sidney B. Finn, Chairman, and all members of the Twenty fifth Anniversary Planning Committee for their advice and assistance; to Dr. Charles A. McCallum, Dean of the School of Dentistry, for his enthusiastic approval and support; to Dr. Frederick W. Kraus, Symposium Chairman, for the countless hours of meticulous planning that ensured the smooth execution of the Symposium; to Ms. Tonnia C. Maddox whose unstinting dedication was indispensable to the organizational success of the meeting; to those who assisted with the transcription of manuscripts and discussions: Ms. Shirley Snow, Ms. Jan Allen, Ms. Janice Buchanan, Ms. Joy Fisher, Ms. Pam Honeycutt, Ms. Mary Huckabee, Ms. Charlotte Hughes, Mr. Stephen Miles, Ms.

**Immunoglobulins: Extending the Horizon** M.D. Kazatchkine, A. Louwagie, 1994-09-15 This is a high-level technical reference text on new and developing uses of intravenous immunoglobulin (IVIg), virological safety and other treatment issues, and active areas of relevant clinical and basic investigation. Volume editor Kazatchkine explains the importance of this work in his Foreword: IVIg therapy represents the first-line treatment in humoral immunodeficiencies. It also stands as an alternative or complementary approach to targeted immunointervention for immunomodulation of hypersensitivity states and autoimmune diseases. Thus, normal circulating immunoglobulins are now known to play an important role in the selection of immune repertoires and regulation of immune homeostasis, in addition to their role in host defense against infection.

**Immunoglobulins** Gary W. Litman, Robert A. Good, 1978 Since the discovery more than thirty years ago that antibody actlvltly could be localized to discrete plasma protein fractions, the study of immunoglobulin struc ture and function has dominated the field of immunochemistry. During this time, sources of homogeneous immunoglobulin molecules have been discovered, the subunit nature of the proteins has been defined, and

the three-dimensional structures of the antigen-recognition portion of several antibody molecules have been elucidated. Insights into the complicated genetic control of these proteins are being gained rapidly through analysis of amino acid sequences of naturally occurring and induced homogeneous immunoglobulins. Immunoglobulins have been analyzed by protein chemists as models of complex multimeric systems, examined by geneticists studying serum protein polymorphisms, and employed by molecular biologists as highly selective probes capable of distinguishing minor features of molecular topography. Clinical applications have ranged from the now routine quantitation of immunoglobulin levels to the use of antibodies to detect trace levels of a variety of natural products and drug metabolites. All these applications have depended ultimately on a thorough understanding of the immunoglobulin and its antigen-combining site. To cover the entire field of immunoglobulin structure and function would require many volumes this size; therefore, subjects presented in this volume represent those which we felt contribute most to our current understanding of this protein family. The first chapters deal with the structure and function of the immunoglobulin molecule.

*Cell of Immunoglobulin Synthesis* Benvenuto Pernis, 2012-12-02 Cells of Immunoglobulin Synthesis documents the proceedings of a symposium on Cells of Immunoglobulin Synthesis held at Arden House, on the Harriman Campus of Columbia University from June 9-11, 1978. The meeting was the third of the P & S Biomedical Sciences Symposia. Starting with the opening address on B lymphocyte differentiation and the tolerance problem, the remainder of the book presents the contributions made by researchers at the symposium. These contributions are organized into seven parts. Part I contains studies on immunoglobulin genes, messages, and molecules. Part II presents studies on cellular immunoglobulin production. Part III examines membrane immunoglobulins while Part IV focuses on immunoglobulins as regulatory molecules. Part V deals with lymphocyte hybrids. Part VI examines immunoglobulin idiotypes while Part VII contains papers on the ontogeny of immunoglobulin-synthesizing cells.

**The Immunoglobulin Receptors and their Physiological and Pathological Roles in Immunity** Jan G.J. Winkel, M. Hogarth, 2012-02-02 Antibodies are crucial to the fine specificity of the immune system. An effective functioning of these molecules requires interaction with immune cells. Receptors for antibodies, Fc receptors, provide this critical link between the humoral and cellular branches of the immune system. This book presents a comprehensive overview of the different Fc receptors currently recognized. The first part of the book contains state-of-the-art overviews on the biological role of FcR. The latest information on FcR heterogeneity, FcR physiology, FcR-ligand recognition, their crucial coordinating role in immunity, interactions with other immunoreceptors, and the role of FcR in immunoglobulin transport and catabolism are discussed. The clinical importance of FcR is developed in the second part of the book. The well-recognized roles of FcR in allergy, inflammation, infectious diseases, autoimmune disorders, and immunotherapeutic importance are reviewed. The information in this book is easily accessible and should be helpful for researchers and clinical specialists as a convenient overview of the field, as well as a comprehensive introduction for students starting in this area of research.
