Infantry Brigade Combat Team (Ibct) Mobility, Reconnaissance, and Firepower Programs Andrew Feikert,2019-04-03 Infantry Brigade Combat Teams (IBCTs) constitute the Army's light ground forces and are an important part of the nation's ability to project forces overseas. The wars in Iraq and Afghanistan, as well as current thinking by Army leadership as to where and how future conflicts would be fought, suggest IBCTs are limited operationally by their lack of assigned transport and reconnaissance vehicles as well as firepower against hardened targets and armored vehicles. There are three types of IBCTs: Light, Airborne, and Air Assault. Light IBCTs are primarily foot-mobile forces. Light IBCTs can move by foot, by vehicle, or by air (either air landed or by helicopter). Airborne IBCTs are specially trained and equipped to conduct parachute assaults. Air Assault IBCTs are specially trained and equipped to conduct helicopter assaults. Currently, the Army contends IBCTs face a number of limitations: The IBCT lacks the ability to decisively close with and destroy the enemy under restricted terrains such as mountains, littorals, jungles, subterranean areas, and urban areas to minimize excessive physical burdens imposed by organic material systems. The IBCT lacks the ability to maneuver and survive in close combat against hardened enemy fortifications, light armored vehicles, and dismounted personnel. IBCTs lack the support of a mobile protected firepower capability to apply immediate, lethal, long-range direct fires in the engagement of hardened enemy bunkers, light armored vehicles, and dismounted personnel in machine gun and sniper positions; with all-terrain mobility and scalable armor protection; capable of conducting operations in all environments. To address these limitations, the Army is undertaking three programs: the Ground Mobility Vehicle (GMV)/Infantry Squad Vehicle (ISV), formerly known as the Ultra-Light Combat Vehicle (ULCV); the Light Reconnaissance Vehicle (LRV); and the Mobile Protected Firepower (MPF) programs. These programs would be based on vehicles that are commercially available. This approach serves to reduce costs and the time it takes to field combat vehicles. The GMV/ISV is intended to provide mobility to the rifle squad and company. The LRV would provide protection to the moving force by means of scouts, sensors, and a variety of medium-caliber weapons, and the MPF would offer the IBCT the capability to engage and destroy fortifications, bunkers, buildings, and light-to-medium armored vehicles more effectively. The FY2020 Army GMV budget request for \$37 million in procurement funding supports the procurement of 69 GMVs for the U.S. Army Special Operations Command and 15 ISVs for the Army. The FY2020 GMV Research, Development, Test & Evaluation (RDT&E) request is for \$3 million to support operational testing. The Army did not submit a FY2020 budget request for the LRV program. The FY2020 Army MPF budget request for \$310.152 million in RDT&E funding supports the continuation of rapid prototyping efforts and the completion of 24 prototypes.

Technical Challenges of the U. S. Army's Ground Combat Vehicle Program Bernard Kempinsky,2012-12-26

The Bradley and How It Got That Way W. Blair Haworth,1999-11-30 The mechanized infantry is one of the least-studied components of the U.S. Army's combat arms, and its most visible piece of equipment, the Bradley Fighting Vehicle, is one of the military's most controversial pieces of equipment. This study traces the idea of mechanized infantry from its roots in the early armored operations of World War I, through its fruition in World War II, to its drastic transformation in response to the threat of a nuclear, biological, and chemical battlefield. The U.S. Army's doctrinal migration from the idea of specialized armored infantry to that of more generalized mechanized infantry led to problematic consequences in training and equipping the force. Haworth explores the origins, conduct, and outcome of the Bradley controversy, along with its implications for Army institutional cultures, force designs, and doctrines. Challenging traditional partisan views of the Bradley program, Haworth goes to the roots of the issue. The author details the mechanized infantry's problematic status in the Army's traditional division of roles and missions between its Infantry and Armored branches. While new conditions demand new equipment, old institutions and current commitments inevitably complicate matters; thus, traditional infantry considerations have driven the Bradley's requirements. The raw capability of the vehicle and the fortitude and ingenuity of its users have to some extent compensated for the conflicting pressures in its design. However, the reluctance of the Army to see mechanized infantry as a specialty has led to the problem the vehicle has faced, as this book clearly shows.

Assessing Conventional Army Demands and Requirements for Ultra-light Tactical Mobility Matthew E. Boyer,Michael Shurkin,Jonathan P. Wong,Ryan Schwankhart,Adam Albrich,Matthew W. Lewis,Christopher G. Pernin,2015 The Army often uses vehicles informally classified as ultra-light tactical mobility (UTM). This report assesses the demands, requirements, current ad hoc capabilities, and key considerations for developing and sustaining established Army UTM fleets.

Bradley R. P. Hunnicutt,2015-09-15 This entry in R. P. Hunnicutt's unrivaled 10-volume history of American armored fighting vehicles focuses on the spectrum of armored personnel carriers with a focus on the Bradley fighting vehicle (BFV). Operations in WWII indicated a need for an armored vehicle with improved protection and reliable mobility for transporting soldiers in and out of battle. To address this need, development began on full-tracked armored personnel carriers with overhead protection before WWII came to a close. Development continued into the postwar period. One result of this program was the M59 armored infantry vehicle, which was pioneered as a low-production-cost vehicle and had the added benefit of being amphibious, a quality that became required in all armored personnel carriers that succeeded it. In his trademark style, Hunnicutt surveys the development of each armored personnel carrier since the end of WWII, illustrating his detailed history with line drawings and photographs. He covers the development of the M113, which was employed successfully in Vietnam and served as the basis for a family of vehicles ranging from armored combat vehicles to unarmored cargo carriers. The success of the M113 as a fighting vehicle gave rise to the development of the Bradley fighting vehicle, which was intended for use by both infantry and cavalry units. With all the detail and precision readers have come to expect from R. P. Hunnicutt's histories of American armored vehicles, Bradley is the definitive work on the history of American fighting and support vehicles. An absolute must-have for anyone interested in American military history.

Stryker Combat Vehicles Gordon L. Rottman,2012-09-20 The eight-wheeled (8x8) Stryker combat light armored vehicle was adopted by the US Army in 2002 to provide a comparatively rapidly deployable contingency force with armor protection, tactical mobility, and heavy firepower, as well as advanced command, control communications, computer, intelligence, surveillance, and reconnaissance (C4ISR) capabilities. Covering the first new US Army release since the M1 Abrams MBT, this book details the conception, ongoing development and deployment of one of the most highly anticipated new AFVs in recent years, including its service in Iraq and the ensuing controversy surrounding the Stryker's varying successes.

Modern Armored Fighting Vehicles Thomas Bruce,2018-09-13 Armored vehicles are essentially armed and armored high mobility off-road vehicles. While their mobility aspects are clearly very important, there are many high mobility off-road vehicles not designed for military applications. Therefore the key defining aspects of an Armored Fighting Vehicle (AFV), as the name implies, is the

armament they carry to inflict damage and the armor they possess as protection against damage. There has within recent years been a great number of exciting and innovative developments in critical AFV technologies. Key among these are significant enhancements to both armament and armor. The primary armament of an AFV consists of relatively large caliber guns that fire a range of ballistic munitions, including kinetic energy penetrators, high explosive, incendiary, and shaped-charge warhead tipped rounds. Some guns are also capable of firing anti-tank guided missiles. In addition to the main weapon, many AFV's are also equipped with a range of secondary weapons including machine guns, grenade launchers, mortar tubes and missile launchers. These weapons and their capabilities in penetrating standardized armor is reviewed in detail in this volume. AFV armor is designed to protect the vehicle against both threats fired by other AFVs and threats originating from any other source, including buried mines, infantry portable weapons, air-launched missiles, artillery shells and improvised devices. Protection against each type of threat often requires a unique type of armor solution. These solutions are then layered onto the vehicle to provide the required protection. Vehicle armor systems include applique armor, spaced armor, reactive armor, cage armor, netted armor, electric armor, spall systems, dazzlers, jammers, and Active Protection Systems (APS). Each type of armor is covered in detail in this volume, both at a system level and with respect to their integration into specific AFVs. This volume covers the theory of AFV design, of armament performance and of armor design and performance. As well most modern AFVs are described and discussed. A modern AFV is considered to be one that was either designed over the last 20 years or is likely to continue to see service with front line combat troops for the foreseeable future. Main battle tanks, light tanks, reconnaissance vehicles, tracked and wheeled armored personnel carriers, infantry fighting vehicles and tank destroyers are covered.

- M2/M3 Bradley* Christian M. DeJohn,2018-09-28 Since the 1980s, the American M2/M3 Bradley has overcome its controversial debut, and is now regarded as among the finest cavalry/infantry fighting vehicles in the world. This book is a concise look at the background, development, and Army operational history of the Bradley from the 1980s to the present. The author, who brings a unique perspective and authority as a Bosnia veteran and former M1A1 tank gunner with the United States Army's 1/104th Cavalry, was granted behind-the-scenes access to the US Army's collection of rare vehicles at Ft. Benning, Georgia. He also includes the Bradley's service in lesser known places--not just Iraq and Afghanistan--such as Cold War Germany, Bosnia-Herzegovina, Korea, and Africa. The book is superbly illustrated with more than 200 color images. Part of the Legends of Warfare series.
