**Richard Herschlag**

**The Interceptor** Angel Fraijo, 2018-12-02 Marcus Moreno was born in East Los Angeles, California, to a proud, loving, tough, dope-dealing father. He was born a warrior; he had to be. He started fighting on the day he was conceived; his body was polluted with the heroin his mother shot up daily and almost killed him. He survived that and then fought the rest of his life growing up in the tough streets of East Los Angeles, delivering drugs around his neighborhood for his father by the age of ten. He was forced to grow up fast. His father, his hero, showed him how to box and martial arts to defend himself. When he was older, he witnessed his hero murdered and then got his revenge. He started his own drug dealing business, served time in the penitentiary, and then went off to kill for his country in Vietnam. In a world where hitmen are common knowledge, Marcus would become an interceptor--a hunter of hitmen. I guess you can say, a killer of killers. It was something he had never heard of before but would soon be deadly at, and that was just the beginning.

**The Interceptor** Richard Herschlag, 1998 An aspiring film director is found dead in the tunnels under 14th Street. A sly real estate mogul has a four-billion-dollar deal at stake. A ruthless candidate has no room to breath in a heated election year. And a lone civil engineer uncovers a secret that could rock the lives of seven million New Yorkers in this fast-moving thriller played out against the glamour and grime of Manhattan.

When they send their emissary Poli back with a mech-suit and a mission, she discovers they may have left a few people behind. THERE'S AN ENTIRE PLANET OF VAMPIRES. AND IT'S CALLED EARTH. #DEATHBEFOREUNDEAD Poli has a mech suit and a mission. Weep has machine guns and a temper. Together they lead a band of freedom fighters on a planet populated exclusively by blood-sucking vampires. A planet called Earth. **Original Interceptor and FF** Richard Calver,2015-06 Guide to the original features in Jensen Interceptors and FFs

Analysis of Effects of Interceptor Roll Performance and Maneuverability on Success of Collision-course Attack William H. Phillips,1961 An attempt has been made to determine the importance of rolling performance and other

factors in the design of an interceptor which uses collision-course tactics. A graphical method is presented for simple visualization of attack situations. By means of diagrams showing vectoring limits, that is, the ranges of interceptor position and heading from which attacks may be successfully completed, the relative importance of rolling performance and normal-acceleration capability in determining the success of attacks is illustrated. The results indicate that the reduction in success of attacks due to reduced rolling performance (within the limits generally acceptable from the pilots' standpoint) is very small, whereas the benefits due to substantially increasing the normal-acceleration capability are large.

Additional brief analyses show that the optimum speed for initiating a head-on attack is often that corresponding to the upper left-hand corner of the V-g diagram. In these cases, increasing speed beyond this point for given values of normal acceleration and radar range rapidly decreases the width of the region from which successful attacks can be initiated. On the other hand, if the radar range is increased with a variation somewhere between the first and second power of the interceptor speed, the linear dimensions of the region from which successful attacks can be initiated vary as the square of the interceptor speed.

**The Interceptor** Donny Cates, 2017-07-11 A planet full of vampires, a soldier from space, a girl named Weep, and one badass mech suit sent from a distant planet with a little kid for a president. What the hell is going on in this

book? Find out as all five issues of this critically acclaimed mini-series are collected for the first time along with never-before-seen concepts and designs from Dylan Burnett, a cover gallery, and exclusive excerpts from the script. #DeathBeforeUndead

**The World's Great Interceptor Aircraft**, 1989 An in-depth examination of top-class modern interceptors, highlighting their strengths and featuring each aircraft in a fold-out spread.

*Mikoyan MiG-31* Yefim Gordon, Dmitriy Komissarov, 2011-10-30 A history of this advanced Russian jet, including useful information for model makers. The MiG-31 started life as an advanced derivative of the famous MiG-25P interceptor, becoming the first Soviet fourth-generation combat aircraft. First flown in 1975, it differed from its progenitor primarily in having a crew of two (pilot and weapons systems operator), a highly capable passive phased-array radar—a world first—and new R-33 long-range missiles as its primary armament. The maximum speed was an impressive Mach 2.82, the cruising speed being Mach 2.35. The type entered service in 1981; more than 500 copies were built between 1981 and 1994. The powerful radar and other avionics allowed the MiG-31 to operate as a “mini-AWACS” scanning the airspace and guiding other interceptors to their targets; a flight of three such aircraft in line abreast formation could cover a strip 800 km (500 miles) wide. To this day the MiG-31 remains one of the key air defense assets of the Russian Air Force. This book describes the MiG-31’s developmental history, including

upgrade programs, and features a comprehensive survey of the MiG-31 model-making kits available on the market.

**Interceptor Vs. Heavy Bomber** David A. Anderton, 1991

**The Interceptor Program** William Vietinghoff, 2014-11-05 A novel in a screenplay format. In Ponca City, Oklahoma, Orville Pressfit claims to have been abducted by aliens, frightening city residents and causing Repulsive Technology Inc. to develop a super-drone, designed to go after the UFO saucers.

*Theoretical Analysis of the Longitudinal Behavior of an Automatically Controlled Supersonic Interceptor During the Attack Phase Against Maneuvering and Nonmaneuvering Targets* C. H. Woodling, 1955 A theoretical analysis has been made of the longitudinal behavior of an automatically controlled supersonic interceptor during the attack phase against a nonmaneuvering target, and for a target which had a constant acceleration normal to its flight path. First-order lead collision navigation was assumed in the investigation, and characteristics of this navigation when used against a maneuvering target are discussed. The flight path of the interceptor was controlled by commanding either a pitching velocity or normal acceleration proportional to the vertical steering error. Computed attack runs are presented which demonstrate some of the advantages and disadvantages of using high gain or integration in the tracking system to minimize or eliminate bias errors in the system which result from target acceleration or interceptor

trim changes.

Helix Nathan M. Farrugia, 2016

*The World's Great Interceptor Aircraft* Smithmark Publishing, 1989-07-01

Shows and describes the capabilities of twenty top interceptors, including the Sea Harrier, Mirage F1, MiG-29, JA 37 Viggen, and F-14 Tomcat

**A Computer Program for the Interception of a Re-entry Body by a Ground-launched Interceptor** E. L. Harris, Carolyn H. Piper, 1969 A computer program is described which calculates the trajectory of a ground-launched vehicle intercepting a maneuvering re-entry body. The motion is planar and proportional navigation is used. Allowance is made for the finite length of time it takes the data acquisition system to process the tracking data, and for the time lag between the demand for a new course and the response to that demand. The Fortran listing of the program and a sample calculation are given. (Author).
