*Nigeria's 2019 Democratic Experience* Egodi Uchendu, Olawari D. J. Egbe, 2022-06-06

Nigeria's democratisation efforts since attaining political independence from Britain have been tumultuous and have spanned over three successive republics. A persistent bug decimating Nigeria's democracy and repeatedly leading to military coups has been brazen electoral violence perpetrated by the nation's political elite. Nigeria's 2019 Democratic Experience analyses and explains what went wrong in Nigeria's experiment with democracy. Nigeria, Africa's most populous nation and the world's seventh most populous nation, also contributes 70% of West Africa's population. She is sub-Saharan Africa's largest oil producer and has remained Africa's largest economy by GDP since 2014. The country has hundreds of diverse ethnic nationalities and languages grouped into 36 states (or federating units) and an independent federal capital territory. Though recognized as Africa's largest democracy, her democratisation process since the 1960s has remained tumultuous with massive electoral violence and political intolerance. This repeatedly compelled the military to intervene in the nation's political history in the years 1966, 1983 and 1985. It is these developments that provided the motivation for this volume to capture for posterity the conduct of the 2019 General Elections in Nigeria.

**Anticipatory cash transfers for climate resilience: Findings from a randomized experiment in northeast Nigeria** Balana, Bedru, Adeyanju, Dolapo, Clingain,

Clare, Andam, Kwaw S., de Brauw, Alan, Yohanna, Ishaku, Olarewaju, Olukunbi, Schneider, Molly, 2023-07-18 This paper presents the findings from an experimental study designed to assess the impacts of one-time large lump sum cash transfers on welfare and coping strategies of smallholders in climate-risk and conflict-affected communities in northeast Nigeria. This pilot intervention was supported by Google.org and implemented by the International Rescue Committee (IRC). The central hypothesis of the intervention is that when climate vulnerable communities have timely access to information and the financial and social resources to act upon that information, they will avoid negative coping strategies and build more diversified and climate resilient livelihoods. The project transferred a lump sum of cash to a treatment group of randomly sampled households when triggered by the climate data risk thresholds. An equal number of comparable households in a control group received the same amount of cash post flooding shock. The main purpose of the study was to assess the impacts of anticipatory cash against the traditional humanitarian post-shocks supporting mechanism. We collected baseline and endline data from a sample of 1450 experimental households (725 'treatment' and 725 'control') and analyzed the data using econometric models. Several outcome indicators including food security, climate adaptive and resilience actions, and wellbeing measures were used to assess the intervention. The results indicate that anticipatory cash has significant impacts on reducing negative coping strategies, increasing the number of pre-emptive climate adaptive actions, and increasing

investment in productive assets that could enhance future resilience. On other hand, anticipatory cash transfers do not seem to have significant impacts on short-term food and non-food consumption expenditures compared to post-shock cash transfers. Our findings indicate that one-time large sum anticipatory transfer could lead households to build their climate resilience capacity, and hence a promising intervention to reduce the vulnerability of households to future climate shocks. Based on the findings we have two key recommendations: (1) Given the generally positive findings on household's welfare and climate resilience capacity, we suggest humanitarian agencies and governments to consider anticipatory interventions (such as pre-shock cash transfers) as a mechanism for both meeting basic needs and improving climate resilience of households provided that quality data and analytics exist to predict a high probability of climate shocks. (2) As climate shocks continue to worsen and humanitarian funding needs remain unmet for both emergencies and early recovery, anticipatory approach may be critical to meeting the short- and long-term needs of climate and conflict-affected households.

**The Lunda-Ndembu** James Anthony Pritchett, 2001 Pritchett (anthropology, African studies, Boston U.) presents an account of the Lunda- Ndembu people of northwestern Zambia. The text is based upon archaeological data, travel accounts, colonial field reports, and the scholarly studies of others, as well as his own field research conducted intermittently over the course of 14 years. He contends that despite much cultural borrowing in recent decades, the Lunda people have an image of themselves that is essentially unchanged. He also reflects on continuity and change in Africa. c. **Who Shall Enter Paradise?** Shobana Shankar, 2014-10-15 Who Shall Enter Paradise? recounts in detail the history of Christian-Muslim engagement in a core area of sub-Saharan Africa's most populous nation, home to roughly equal numbers of Christians and Muslims. It is a region today beset by religious violence, in the course of which history has often been told in overly simplified or highly partisan terms. This book reexamines conversion and

religious identification not as fixed phenomena, but as experiences shaped through cross-cultural encounters, experimentation, collaboration, protest, and sympathy. Shobana Shankar relates how Christian missions and African converts transformed religious practices and politics in Muslim Northern Nigeria during the colonial and early postcolonial periods. Although the British colonial authorities prohibited Christian evangelism in Muslim areas and circumscribed missionary activities, a combination of factors—including Mahdist insurrection, the abolition of slavery, migrant labor, and women’s evangelism—brought new converts to the faith. By the 1930s, however, this organic growth of Christianity in the north had given way to an institutionalized culture based around medical facilities established in the Hausa emirates. The end of World War II brought an influx of demobilized soldiers, who integrated themselves into the local Christian communities and reinvigorated the practice of lay evangelism. In the era of independence, Muslim politicians consolidated their power by adopting many of the methods of missionaries and evangelists. In the process, many Christian men and formerly non-Muslim communities converted to Islam. A vital part of Northern Nigerian Christianity all but vanished, becoming a religion of “outsiders.”
