Allied Armoured Fighting Vehicles of the Second World War

Michael Green, 2017-04-30 Expert author Michael Green has compiled a full inventory of the armored fighting vehicles developed and deployed by the Allied armies during the six year war against Nazi Germany and her Axis partners. Tank destroyers included the US Army's M18 Hellcat and M36 Jackson, the British Archer and Achilles and the Soviets SU-85, SU-100 and SU-122. Self-propelled artillery vehicles provide indirect fire support. Examples of these were the British Bishop and Sexton, the US M7 Army Priest and The Red Army's SU-152 Beast Slayer. For reconnaissance the Allies fielded armored cars and scout cars such as the Daimler Dingo, the US M8 Greyhound and T17 Staghound, and the Russian BA-10, -20 and -64. AFVs such as the British full tracked Universal Carrier and US M3 halftracks were fitted with a range of weapon systems, such as mortars or machine guns. All these and many more AFVs are expertly described in words and captioned images in this comprehensive work which is the companion volume to the authors Allied Tanks of the Second World War.

Red Army Weapons of the Second World War

Michael Green, 2022-09-21 While the Red Army's arsenal at the start of the Second World War included weapons dating back to the Great War or earlier, the 1930s' modernization program had introduced the automatic Tokarev pistol and self-loading Tokarev rifle. Its small arms were soon replaced by mass-produced sub-machine guns, such as the PPSH 1941, nicknamed the 'PePeSha'. Supplementing the submachine guns, the Degtyarev Light Machine Gun DP-27. Fitted with a circular pan magazine, it received the not-unsurprising nickname 'Record Player.' New mortars and towed artillery pieces, ranging from 76mm to 203mm, entered service in the pre-war years. In addition to a wide range of towed, self-propelled and anti-tank guns, the Soviets fielded the Katyusha rocket launchers in 1941, nicknamed

the 'Stalin's organ' by the Germans. The 1930s saw the introduction of the BT light tank series. The iconic T-34 medium tank series came into service in late 1940, joined by the IS-2 heavy tank from early 1944, the prefix letters 'IS' translates to Joseph Stalin. These formidable AFVs led the Red Army to victory in May 1945 over Nazi Germany. All these weapons and more are covered with numerous images in this authoritative overview of the subject.

Tanks of World War II Up Close Martin J.

Dougherty, 2015-12-15 During World War II, tanks and armored fighting vehicles evolved as their production increased. Designs varied as they were equipped with larger guns, turrets, radios, and other features for specialized tasks. Readers will get a detailed view of the Whippet, Tiger, Maus, and many other tanks, with a particular focus on the specifications and armament attachments. Each tank's role in the war is described alongside photographs of it in battle, providing a look into military technology that will entrance military history buffs and reluctant readers.

Bolt Action: Korea Warlord Games, 2019-08-22 Beginning in 1950, the Korean War was a defining moment for the UN and the entirety of the early Cold War, widening the already monumental gulf between the east and west, capitalist and communist. This supplement for Bolt Action expands the rules-set from its World War II roots to this new, and truly modern, conflict. Bolt Action: Korea contains all the rules, Theatre Lists, scenarios, and new and exciting units, never seen in Bolt Action before, to wargame this turbulent period of world history.

SU-152/ISU-152 vs Tiger David Greentree, 2022-04-28 This fully illustrated volume compares two of the most iconic AFV's: the SU-152/ISU-152 and the Tiger, used on the Eastern Front during World War II. On the Eastern Front in 1943, the Tiger-equipped heavy Panzer battalions gave German armoured divisions an unmatched capability that cost the Red Army dearly.

The Tiger's 88mm gun had the potential to carve through Soviet defences in the attack and cause havoc amongst advancing Soviet armoured formations when used in defence. Neither of the Red Army's heavy tanks (the KV-1 and KV-2) could match the Tiger's gun, and, more importantly, penetrate its armour at anything approaching standard combat range. The Soviet response was a stopgap Tiger-killing vehicle that mounted a 152mm artillery piece onto the KV tank's chassis: the SU-152. The latter would evolve into the ISU-152 in late 1943 (mounting the same powerful gun on an IS chassis). This fascinating book describes the mighty duels fought between these opposing AFVs. The colour illustrations explore key details of both the SU-152/ISU-152 and Eastern Front Tigers, including armament, ammunition and crew positions, and the period photographs show rarely seen views of these iconic AFVs in action. How each attempted to best the other using its strengths and advantages is documented across a wide range of dramatic Eastern Front armoured battles.

The Encyclopedia of Weapons of World War II Chris Bishop, 2002 The encyclopedia of weapons of world war II is the most detailed and authoritative compendium of the weapons of mankind's greatest conflict ever published. It is a must for the military enthusiast, and all those interested in World War II.

IS-2 Heavy Tank 1944-73 Steven J. Zaloga, 2011-03-15 The Iosef Stalin tanks were the ultimate heavy tanks developed by the Soviet Union and were popularly called 'Victory tanks' due to their close association with the defeat of Germany in 1945. Yet in spite of their reputation, the Stalin tanks emerged from a troubled design, had a brief moment of glory in 1944 and 1945, and disappeared in ignominy after 1960. This title covers the events contributing to the Soviet Union's need to design the new series, with particular reference to the unsuccessful KV series and the advent of a new generation of heavy German tanks including the Tiger. It also covers their development, operational history and myriad variants.

Artillery of the Warsaw Pact Russell Phillips, 2018-08-22

Considered to be “the god of modern war” by the Soviet army, artillery played a vital role in the Cold War period. The armies of the Warsaw Pact made artillery a cornerstone of their military strategies. And the importance they placed on this type of weaponry saw them use their technology and expertise to develop a wide range of munitions including mortars, rocket launchers, missiles and large-calibre guns. *Artillery of the Warsaw Pact* provides a compelling and detailed account of the artillery used by Warsaw Pact countries and the important role it played during this period of suspicion, tension and unease. The powerful weapons created at this time had the potential to destroy significant enemy resources, posing a very real threat to NATO forces. This book will allow you to gain an insight into the way in which artillery was used by the Soviet Union and other Warsaw Pact nations. Read about mortars ranging from light 50mm weapons to enormous 240mm breech-loaded versions capable of destroying fortified buildings from a distance. *Artillery of the Warsaw Pact* also looks at the widespread use of towed guns as well as the growth in popularity of self-propelled guns. The book also details how Second World War weapons like multiple rocket launchers continued to play a key part in the Cold War hostilities, alongside newly-developed artillery, including tactical ballistic missiles which Khrushchev viewed as a critical part of his response to the threat posed by the United States.

Konflikt '47 Warlord Games, Clockwork Goblin, 2016-08-25
1944 Atomic testing at Los Alamos opens a rift in the fabric of space, while the detonation of the Fat Boy atomic bomb over Dresden creates a second. German and American scientists determine that signals are being transmitted through the rifts, many indecipherable, but some containing revolutionary scientific and technological theorems. Desperate for any military advantage, Germany and the US swiftly apply these discoveries to their war efforts, and incredible new weapons begin to appear on the battlefield. Angered by America's refusal to share the secrets of Rift-tech, Stalin declares war on the US and Britain, and the Allies are fractured. 1947 World War II has entered a completely new phase. Power-armoured infantry armed with personal wonder-weapons follow super-heavy tanks and mechanised walkers into battle, smashing defences with colossal firepower, while genetic monstrosities are sent out to hunt and terrorise enemy forces. This is the new nature of war. This is Konflikt '47.
*** With rules inspired by the award-winning Bolt Action system, this standalone game takes World War II to a completely new level, and offers everything required to harness the incredible weapons and technologies made possible by the rift signals, and to engage in tabletop battles for supremacy and survival.

Soviet Soldier vs Finnish Soldier David Campbell, 2020-08-20
In a bid to recapture territory conceded following the Winter War of 1939–40, Finnish forces cooperated with Nazi Germany and other Axis powers during the invasion of the Soviet Union in June 1941. Rapid Finnish progress in reoccupying lost ground in Karelia during the first few months of the invasion gave way to a more static form of warfare from October 1941. The Finns resisted German pressure to participate fully in the Axis attack on the beleaguered Soviet-held city of

Leningrad, and the Continuation War came to be characterized by trench warfare and unconventional operations conducted by both sides behind the front lines. In June 1944 the stalemate was abruptly ended by a massive Soviet offensive that pushed the Finns back; the two sides clashed in a series of major battles, including the battle of Tali-Ihantala, with the Finns halting the Soviet advance before agreeing to an armistice that September. The evolving military situation in this sector of the Eastern Front meant that the soldiers of the Soviet Union and Finland fought one another in a variety of challenging settings, prompting both sides to innovate as new technologies reached the front line. In this study, the doctrine, training, equipment and organization of both sides' fighting men are assessed and compared, followed by a detailed assessment of their combat records in three key battles of the Continuation War.

T-34 Shock: The Soviet Legend in Pictures Francis

Pulham, Will Kerrs, 2021-07-11 The Soviet T-34 medium tank needs no introduction, being the most famous tank ever built especially as has seen service across the globe throughout the twentieth century's most brutal wars. However, despite this fame, little has been written about its design changes. While most tank enthusiasts can differentiate between the 'T-34/76' and the 'T-34-85', identifying different factory production batches has proven more elusive. Until now. With nearly six hundred photographs, mostly taken by soldiers who both operated and fought against the T-34, this book seeks to catalogue and contextualise even the subtlest details to create a true 'T-34 continuum'. The book begins with the antecedents of the T-34, the ill-fated BT 'fast tank' series and the influence of the traumatic Spanish Civil War before moving to an in-depth look at the T-34's prototypes. After this, every factory production change is catalogued and contextualised, with never-before-seen

photographs and stunning technical drawings. Furthermore, four battle stories are also integrated to explain the changing battle context when major production changes take place. The production story is completed with sections on the T-34's post-war production (and modification) by Czechoslovakia, Poland, and the People's Republic of China, as well as T-34 variants.

Modelling the IS Heavy Tank Nicola Cortese, 2012-02-20 The IS (Iosef Stalin) heavy tanks were some of the most widely used AFVs produced by the USSR. First entering combat in 1944, the IS-2 went head-to-head with German tanks such as the Panther, Tiger and King Tiger, and post war IS-2s and IS-3s were exported to China, Cuba and North Korea. This book is packed with easy to follow super-detailing and finishing instructions for building the IS-2, IS-3, and IS-3M variants, as well as for the prototype ISU-152, and features kits from manufacturers such as Dragon, Tamiya, and Fujimi. Advanced scratch-building techniques and working with photo-etched and other after-market accessories in 1/35 and 1/76 scales are covered, making this highly accessible book a welcome addition to any modeller's library.

Tanks in the Battle of Germany 1945 Steven J. Zaloga, 2022-11-24 A new history and analysis of the German and Soviet tank forces that battled on eastern German soil in the final months of World War II. The final months of World War II on the Eastern Front saw the Wehrmacht fighting with exhausted armoured divisions, albeit now armed with the most advanced and heaviest tanks of the war, to slow the Soviet advance. The Red Army meanwhile was rolling relentlessly westwards, with its own highly developed tank forces now equipped with T34/85s and the huge IS-2 heavy tanks, intent on taking Berlin and as much German territory as possible. This book is a history and analysis of the state of these two mighty armoured forces, as their battles decided the fate of Germany. It covers their initial encounters on the German frontier in 1944 (East Prussia), the fighting of the Oder-Vistula offensive in January 1945 and describes the

condition of the German tank forces and their Hungarian allies as they were beaten back. It also considers the huge impact of The Red Army and other significant Allied forces such as those from Poland, Czechoslovakia and Romania on the outcome of victory in the war.
