Russia Richard Anderson, 2015-11-15 This book offers a comprehensive account of Russia's architectural production from the late nineteenth century to the present, explaining how its architecture was both shaped by and came to embody Russia's rapid cultural, economic, and social revolutions over the past century. Richard Anderson looks at Russia's complex relationship to global architectural culture, exploring the country's central presence in the Rationalism and Constructivism movements of the 1920s, as well as its role as a key protagonist during the Cold War. Looking deeply at Soviet Russia, he brings the relationship between architecture and socialism into focus through detailed case studies that situate buildings and architectural concepts within the socialist milieu of Soviet society. He tracks the way Russian architectural institutions departed from the course of modernism being developed in capitalist countries, and he reappraises the architecture of the Stalin era and the final decades of the USSR. Finally, he traces the influence of Soviet conventions on contemporary Russian architecture—which is now a more heterogeneous mix of approaches and styles—and how it made a lasting and little-known impact on territories extending from the Middle East, to Central Asia, and into China. A bold new assessment of Russia's architectural legacy and contemporary contributions, this book is a fascinating exploration of a tumultuous place—and the creativity that has come from it.

Tupelov Tu-22 'Blinder' Tu-22M 'Backfire' Yefim
Gordon,Vladimir Rigmant,1998 Prior to the
development of the Tu-22, NATO planners had long
feared the idea of the Soviets developing a long-
range supersonic nuclear bomber. The Tu-22
'Blinder' never really gave the USSR what they
were looking for but Tu-22M 'Backfire' did! This
information-packed volume reveals Soviet tactics
for destroying NATO warships using 'Blinders', and
its use by Libya and Iraq.

the 1960s, and the two 1961 Mercury and Redstone
missions which were non-orbital. There is an image

containing brief biographies of all the space
travelers. The main text is a narrative of each
mission, its highlights and accomplishments,
including the strange facts and humorous stories
connected to every mission. The resulting book is

Myasishchev M-4 And 3M Yefim Gordon,Dmitriy Komissarov,2021-07-28 When the Myasishchev design bureau was reborn in 1951, it was immediately tasked with creating a high-speed strategic bomber to balance the threat posed by NATO's heavy bombers, notably the B-52. Designated M-4 and code-named Bison by NATO, the new four-turbojet bomber was developed within an incredibly short time--just one year. It made use of many innovative features, including a bicycle landing gear, and was designed around the most powerful jet engine of the day. It became the progenitor of a small family of bombers and refueling tankers, including the much-improved 3M and its versions. Many of the intended versions never materialized, and the Bison had its share of problems, but it came at just the right time, providing a valuable nuclear deterrent, and remained in service for 40 years until retired in compliance with the START treaty. The book charts the first Soviet strategic jet bomber's development and operational history. It includes the story of how the 3M was adapted to carry components of the Energiya/Buran space transport system as the VM-T Atlant outsize cargo transporter.

Archaeologies of Animal Movement. Animals on the Move Anna-Kaisa Salmi,Sirpa Niinimäki,2021-06-28 This book presents the state-of-the art in the analysis of animal movements in the past and its implications for human societies. It also addresses the importance of animal activity and mobility for understanding past human societies

and past human-animal relationships through cases studies from different periods and areas. It is the first book to focus on the archaeology of animal movement on different scales – from fine-tuned muscle movements of working animals to feeding behavior and to long-distance movements across landscapes and regions. With the recent development of fine-tuned methodologies such as stable isotope analysis and physical activity assessment, the potential to understand how animals moved about in the past has increased substantially. While the chapters in the volume utilize a wide range of archaeological methods, they are all united by an emphasis on understanding animal activity and mobility patterns as something that has a major impact on human societies and human-animal relationships. Chapters in this volume show that animal activity patterns provide information on multiple aspects of human-animal relationships, including analysis of animal management practices, transhumance, global and regional trade networks, and animal domestication. This volume is of interest to scholars working in zooarchaeology and early human societies.

Artillery Jeff Kinard, 2007-03-28 Addressing its technical evolution as well as its military and social impact, this comprehensive reference shows how historic leaders such as Dionysus of Syracuse, the Ottoman sultan Mohammad II, Oliver Cromwell, and Napoleon Bonaparte were successful in battle because of their innovative use of artillery. **Artillery: An Illustrated History of Its Impact** charts the development of large, crew-operated

battlefield weapons from the dart firers and catapults of the ancient world to the invention of gunpowder in China and its applications in medieval Europe, and from the emergence of naval and land gunnery four centuries ago to the latest rapid-fire, rocket propulsion, laser guidance, and antiaircraft technologies. Written by an expert on military history, Artillery explores the technological and strategic innovations that have made these weapons increasingly effective at breaking through fortifications, inflicting casualties from a safe distance, providing cover for advancing forces, demoralizing opponents, and defending positions from attack. Beyond the battlefield, the book also looks at the impact of artillery on history and on the lives of civilians as well as soldiers.

Viking-Age Trade Jacek Gruszczyński, Marek Jankowiak, Jonathan Shepard, 2020-10-06 That there was an influx of silver dirhams from the Muslim world into eastern and northern Europe in the ninth and tenth centuries is well known, as is the fact that the largest concentration of hoards is on the Baltic island of Gotland. Recent discoveries have shown that dirhams were reaching the British Isles, too. What brought the dirhams to northern Europe in such large numbers? The fur trade has been proposed as one driver for transactions, but the slave trade offers another – complementary – explanation. This volume does not offer a comprehensive delineation of the hoard finds, or a full answer to the question of what brought the silver north. But it highlights the trade in slaves as driving exchanges on a trans-

continental scale. By their very nature, the nexuses were complex, mutable and unclear even to contemporaries, and they have eluded modern scholarship. Contributions to this volume shed light on processes and key places: the mints of Central Asia; the chronology of the inflows of dirhams to Rus and northern Europe; the reasons why silver was deposited in the ground and why so much ended up on Gotland; the functioning of networks – perhaps comparable to the twenty-first-century drug trade; slave-trading in the British Isles; and the stimulus and additional networks that the Vikings brought into play. This combination of general surveys, presentations of fresh evidence and regional case studies sets Gotland and the early medieval slave trade in a firmer framework than has been available before.

Tupolev Aircraft Since 1922 Bill Gunston, 1995
This popular and highly-acclaimed series includes an abundance of photos, accurate line drawings, fascinating evaluations of aircraft design, and complete histories of aircraft manufacturers.

The Osprey Encyclopedia of Russian Aircraft Bill Gunston, 2000-05-25 Sweeping away the red herrings and spurious details invented in the West between 1950 and 1970, this exhaustive volume can be

offered to the public with the knowledge that it documents the true histories of some 1000 aircraft types. Much of what was believed to be fact has been proven wrong in various degrees, and it can confidently be claimed that no book in the history of aviation has ever contained so much new information. The volume is prefixed by sections on aircraft designations, engines, air launched weapons and much more - this really is the definitive work on Russian aircraft.
