Jagdpanzer IV – German Army and Waffen-SS Tank Destroyers Dennis Oliver,2020-08-31 Combining the destructive firepower of the 75mm gun with the mobility of the Pzkw IV medium tank , the Jagdpanzer IV was quite possibly the most effective tank destroyer of the Second World War. From early 1944 these vehicles were allocated to the anti-tank battalions of Panzer and Panzergrenadier divisions and saw action in Normandy, the Ardennes and the final battles in Germany. In his latest book in the TankCraft series, Dennis Oliver uses contemporary photographs and meticulously researched, superbly presented color and monochrome illustrations to tell the story of these self-propelled anti-tank guns and the units which operated them in the German defense of the Western Front. As with all the books in the TankCraft series, a large part of this work showcases available model kits and after-market products, complemented by a gallery of expertly constructed and painted models. Technical details as well as modifications introduced during production and in the field are also explained giving the modeler all the information and knowledge required.

Jagdpanzer IV Krzysztof Mucha,2019-12-27 The signal of need of such kind of vehicles extension occurred when the struggle against the Soviet Union began. Another ones came from North Africa. In both cases few times turned out that hard-to-eliminate foible of the units equipped with towed guns was its mobility when the tanks and short-barreled assault guns, engaged often and often as the antitank artillery, revealed insufficient firepower. There were self-propelled guns called Panzerjäger, put into service in the turn of 1942 and 1943. Despite the fact of being armed with a valuable 75 mm or 76,2 mm main armament, their crews were not protected effectively – the armor plates' thickness was merely up to 10 mm.

Cromwell vs Jagdpanzer IV David R. Higgins,2018-05-31 By 1944, the evolution of armoured doctrine had produced very different outcomes in Britain and Germany. Offering a good balance of speed, protection and firepower, the British Cromwell tank was much faster than its German opponent, but the Jagdpanzer IV tank destroyer had a high-velocity main gun and a lower profile that made it formidable on the defensive, especially in ambush situations. The two types would fight in a series of bloody encounters, from the initial days of the struggle for Normandy through to its climax as the Allies sought to trap their opponents in the Falaise Pocket. Using archive photographs, specially commissioned artwork and battle reports, this fascinating study expertly assesses the realities of tactical armoured combat during the desperate battles after D-Day.

Panzer IV, 1939-1945 Paul Thomas,2017-11-30 With comprehensive captions and text this superb book tells the story of the production of the Panzer IV to the key battles in Poland, France, North Africa, Italy, Russia and North West Europe. Initially the Panzer IV was designed as an infantry support tank, but soon proved to be so diverse and effective that it earned a unique tactical role on the battlefield.The book shows how the Panzer IV evolved and describes how the Germans carefully utilized all available reserves and resources into building numerous variants that went into production and saw action on the battlefield. It depicts how these formidable tanks were adapted and up-gunned to face the ever increasing enemy threat.Between 1936 and 1945, over 8,000 Panzer IVs were built. For most of the war this tank was a match for its opponents heavy tanks and quickly and effectively demonstrated its superiority on the battlefield.The Panzer IV was the only German tank to remain in production during the war. Its chassis was converted into more models than any other Panzers that entered service. As well as the various prototype projects and command tanks, observation vehicles, ammunition carriers, recovery vehicles, amphibious armored ferry vehicles that saw service, the book will show a multiple of converted anti-tank propelled vehicles.

Panzer IV at War, 1939-1945 Paul Thomas,2012-06-19 The Panzer IV Panzerkampfwagen IV was one the foremost German fighting vehicles of the Second World War, and this volume in the TankCraft series is an ideal introduction to it. With detailed captions, text and illustrations the book tells the story of the technical development of the Panzer IV and the numerous variants that went into production, and it describes how it evolved from an infantry support vehicle to become the backbone of the Panzer units. It was modified and upgunned to face the ever-increasing enemy threat, and it proved to be so diverse and effective that it earned a unique tactical role on the battlefield.A large part of the book showcases available model kits and after market products, complemented by a gallery of beautifully constructed and painted models in various scales. Technical details as well as modifications introduced during production and in the field are also examined in order to provide everything the modeler needs to recreate an accurate representation of the only Panzer that stayed in production throughout the war.

The Encyclopedia of Weapons of World War II Chris Bishop,2002 The encyclopedia of weapons of world war II is the most detailed and authoritative compendium of the weapons of mankind's greatest conflict ever published. It is a must for the military, enthusiast, and all those interested in World War II.

Jagdpanzer IV L/48 Krzysztof Mucha,George Parada,2009-12-15 * Includes free decals and masking foil Highly detailed publication covering the World War II Jagdpanzer IV L/48 – a tank destroyer based on the Panzer IV chassis. The almost-vertical front hull plate was replaced by sloped armor plates and internally, the layout was changed to accommodate the new superstructure, moving the fuel tanks and ammunition racks. Since the Jagdpanzer lacked a turret, the engine which originally powered

the Panzer IV's turret could be eliminated. The new superstructure had 80 mm thick sloped armor, which gives a much greater armor protection than a vertical armor of 100 mm. To make the manufacturing process as simple as possible, the superstructure was made out of large, interlocking plates which were welded together. Containing dozens of archive black and white and color photos, including 15 pages of close-up and walk around shots, and 4 pages of color artwork profiles, this is an ideal reference for both the enthusiast and modeler, with free decals included. About the Series Photosniper is a classic series of highly illustrated photo books on the best machines of war, creating, with numerous images, a close-up, walk-around view for each aircraft or vehicle. With emphasis on the key features of each machine, including their variations, artwork, markings, insignia and modifications, customizing and creating a model could not be easier. Includes a free decal sheet.

German Tank Destroyers Pierre Tiquet,2021-08-04 An “unusually well-detailed” pictorial history of the entire class of vehicles including the Hornisse, Jagdpanzer 38, Jagdpanzer IV, and Elefant (AMPS). From the early days of World War II, it was clear that the Wehrmacht’s antitank units would need to be motorized as existing horse- or automobile-drawn units were too slow to be effective. Initially, antitank guns were mounted onto available, usually obsolete, tank chassis, such as the Panzerjäger I and II. However, German engineers would soon turn to the heavy chasses of the Panzer IV, the Panther, and the Tiger for their tank hunters. It became apparent during the invasion of France that enemy antitank guns were both more powerful and better armored, and improvement became a priority during Barbarossa as German units faced off against the new Soviet tanks. The appearance of the Soviet T-34 in July 1941 meant that the Germans had to quickly come up with something equally powerful. The result was the motorized panzerjäger, faster and more mobile than older towed versions. This was followed in 1942 by the introduction of the 7.5cm gun. Further designs and modifications were informed by reports from the front line. Some of these conversions were very successful and resulted in fearsome tank destroyers deployed to great effect by the Wehrmacht. The lightweight Hetzer, for example, was based on a modified Panzer 38(t) and entered service in 1944. This small tank became Germany’s main tank destroyer during the final stages of the war, and would continue in use around the world even after 1945. Though they may not have looked that intimidating, the Landser were soon won over, and were comforted to have something reliable to stand between them and the Soviet tanks. This account, illustrated by hundreds of period photos, examines the development and deployment of various models of tank destroyers during World War II. “A very nice reference resource, with lots of detail and diorama inspiration for modelers.” –Military Model Scene

Modelling the Panzer IV in 1/72 scale Alex Clark,2012-07-20 Although not as glamorous as vehicles such as the Panther and Tiger, the Panzer IV formed an extremely important part of the German armoured forces during World War II. This title provides detailed 1/72-scale build articles on a Panzer IV Ausf. H in winter camouflage, a Jagdpanzer IV, a late-version Sturmpanzer IV, a final version Sturmgeschütz IV, and a Flakpanzer IV Wirbelwind. Conversions, interior detailing, kit-bashing, adding aftermarket figures and parts, finishing and weathering, plus special scale techniques are all covered in detail. A gallery section also features Panzer IV Ausf. H, Panzer IV L/70 (V), and Panzer IV L/70 (A) variants.

Panzer Gunner Bruno Friesen,2009-07-16 Unique memoir of a Canadian serving in a German armored division What it was like to fight in a tank on the Eastern Front Details on the battlefield performance of the Panzer IV tank Six months before World War II erupted in 1939, Bruno Friesen was sent to Germany by his father in hopes of a better life. Friesen was drafted into the Wehrmacht three years later and ended up in the 7th Panzer Division. Serving as a gunner in a Panzer IV tank and then a Jagdpanzer IV tank destroyer, Friesen experienced intense combat against the Soviets in Romania, Lithuania, and West Prussia.

Normandy 1944 Niklas Zetterling,2019-12-19 A revised and updated single-source reference book accurately detailing the German field forces employed in Normandy in 1944 and their losses. In this book, military historian Dr. Niklas Zetterling provides a sobering analysis of the subject matter and debunks a number of popular myths concerning the Normandy campaign—the effectiveness of Allied air power; the preferential treatment of Waffen-SS formations in comparison to their army counterparts; etc. He supports his text with exhaustive footnoting and provides an organizational chart for most of the formations covered in the book. Also included are numerous organizational diagrams, charts, tables, and graphs. “A valuable reference for anyone seriously interested in the battle for Normandy.” –The NYMAS Review

Building Guderian’s Duck: Germany’s Response To The Eastern Front Antitank Crisis, 1941 To 1945 L-Cmdr Scott M. Chafian,2014-08-15 The appearance of the T-34 in 1941 caused a crisis for German antitank forces. Existing antitank guns were nearly impotent against the new Russian tank, while antiaircraft and artillery pieces, though successful when pressed into action, were insufficiently mobile to accompany mechanized forces. The German Army Ordnance Office, the Heereswaffenamt, was responsible for development of new weapons and would be responsible for countering the threat of Russian armor. The Heereswaffenamt would need to not only counter the T-34, but also do so in an environment of shifting political relationships and with an increasingly stressed industrial system. Utilizing lessons from the bitterly contested battlefields of western Russia, the Heereswaffenamt developed a tank-destroyer, the Jagdpazer IV, using the existing chassis of the Panzer IV tank, and the guns of both the Panzer IV and Panther tanks. The Jagdpanzer IV, known by its crews as Guderian’s Duck, proved to be a capable tank killer against both the T-34 threat of 1941 and 1942, as well as the improved versions of 1943 and 1944.

Jagdpanther Tank Destroyer Dennis Oliver,2017-11-30 “First class illustration and a very effective text overview . . . covers the development, on the Panther chassis, of a very effective tank destroyer.”– Firetrench Combining the destructive firepower of the 88mm gun with the outstanding mobility of the Panther series, the Jagdpanther is quite probably the best-known tank destroyer of the Second World War. In the vehicle’s first action on 30 July 1944, three Jagdpanthers managed to destroy eleven British tanks in a vicious two-minute fire fight near the village of Les Loges in Normandy, cementing the Jagdpanther’s reputation as a potent tank killer. In his fifth book in the TankCraft series, Dennis Oliver uses contemporary photographs and meticulously researched, superbly presented color and monochrome illustrations to tell the story of these heavy self-propelled antitank guns and the units which operated them in the German defense of the Western Front. As with all the books in the TankCraft series, a large part of this work showcases available model kits and aftermarket products, complemented by a gallery of expertly constructed and painted models. Technical details as well as modifications introduced during production and in the field are also explained giving the modeler all the information and knowledge required. “Really interesting concept to combine historical, technical and modeling content in one book. Nicely illustrated . . . As a first Jagdpanther book for modelers seeking an economical source on models, accessories and paint schemes, this is valuable... Highly Recommended for Beginner to Intermediate builders.”–AMPS
