Dirkfest '92 - A Symposium In Honor Of J D

Walecka's Sixtieth Birthday Maung Maung Khin, W W Buck, Brian David Serot, 1992-12-18 Professor J Dirk Walecka has made significant and lasting contributions to the field of nuclear physics. His work on many-body theory and electron scattering from nuclei profoundly influenced the direction of research in electromagnetic nuclear physics. His formulation of semileptonic weak interactions with nuclei introduced many nuclear physicists to the 'standard model' and the concept of the nucleus as a 'laboratory' for studying fundamental interactions. His development of meson-baryon field theories for nuclear systems ('quantum hadrodynamics') initiated novel research on relativistic effects in nuclei, high-density nuclear matter, and applications of field-theoretic techniques to the nuclear many-body problem. This proceedings focusses on three major areas of Professor Walecka's research: many-body theory, electroweak interactions in nuclei and relativistic nuclear physics. The topics discussed cover a broad and interesting range in condensed matter physics, nuclear physics, high-energy physics and cosmology.

A Battle History of the Imperial Japanese Navy Paul Dull, 2012-12-12 For almost 20 years, more than 200 reels of microfilmed Japanese naval records remained in the custody of the U.S. Naval History Division, virtually untouched. This unique book draws on those sources and others to tell the story of the Pacific War from the viewpoint of the Japanese. Former Marine Corps officer and Asian scholar Paul Dull focuses on the major surface engagements of the war-Coral Sea, Midway, the crucial Solomons campaign, and the last-ditch battles in the Marianas and Philippines. Also

included are detailed track charts and a selection of Japanese photographs of major vessels and actions.

Weak and Electromagnetic Interactions in Nuclei
Hans Volker Klapdor, 2012-12-06 Nuclear physics is presently experiencing a thrust towards fundamental physics questions. Low-energy experiments help in testing beyond today's standard models of particle physics. The search for finite neutrino masses and neutrino oscillations, for proton decay, rare and forbidden muon and pion decays, for an electric dipole moment of the neutron denote some of the efforts to test today's theories of grand unification (GUTs, SUSYs, Superstrings, ...) complementary to the search for new particles and symmetries in high-energy experiments. The close connections between the laws of microphysics, astrophysics and cosmology open further perspectives. This concerns, to mention some of them, properties of exotic nuclei and nuclear matter, and star evolution; the neutrino and the dark matter in the universe; relations between grand unification and evolution of the early universe. The International Symposium on Weak and Electromagnetic Interactions in Nuclei (W.E.LN. 1986)' held in Heidelberg 1-5 July 1986, in conjunction with the 600th anniversary of the University of Heidelberg, brought together experts in the fields of nuclear and particle physics, astrophysics and cosmology.

Routledge Handbook of Japanese Foreign Policy

Mary M. McCarthy, 2018-02-19 From a nuclear North Korea and territorial disputes in the East China Sea, to global climate change and Asia-Pacific free trade agreements, Japan is at the center of some of the most challenging issues that the world faces today. Taking an interdisciplinary approach, comprising contributions from the fields of politics, sociology, history, and gender studies, this handbook creates a comprehensive and innovative overview of the field, investigating the widening variety of interests, sometimes competing, that constitute Japanese foreign policy. Organized topically, it is divided into sections, including: • Japan's evolving foreign policy landscape • Global environmental and sustainable development • International and national security • International political economy • International norms and civil society. Providing an evaluation of the key actors, institutions, and networks influencing Japanese foreign policy, the Routledge Handbook of Japanese Foreign Policy is an essential resource for students and scholars of Japanese and Asian Politics, International Relations, and Foreign Policy.

New Vistas in Electro-Nuclear Physics Edward L. Tomusiak, Henry S. Caplan, Edward T. Dressler, 2013-11-11 The NATO Advanced Study Institute New Vistas in Electro-Nuclear Physics was held in Banff, Alberta, Canada from August 22 to September 4, 1985. This volume contains the lecture notes from that Institute. The idea to organize this Institute coincided with the award of funding for a pulse stretcher ring at the University of Saskatchewan's Linear Accelerator Laboratory. This together with the high level of interest in electron accelerators worldwide convinced us that it was an appropriate time to discuss the physics to be learned with such machines. In particular that physics which requires high energy and/or high duty cycle accelerators for its extraction was intended to be the focus of the Institute. Thus the scope of the lectures was wide, with topics ranging from the structure of the trinucleons to quark models of nucleons, QCD, and QHD. The theme however was that we are just trying to understand the nucleus and that the electromagnetic probe can serve as a powerful tool in such a quest.
