**Rewild** Jeff Leach,2015-08-04 Our understanding of what makes us sick has changed dramatically in the last few years - mainly due to advances in metagenomic sciences and computing power. It seems the trillions of tiny little microbes living on and inside our body have a great deal to do with our health. The good news is that through diet and other lifestyle decisions, you may be able to nudge your gut microbes in a direction for optimal health. Rewild is a collection of essays from the Human Food Project.

**Bloom** Jeff Leach,2013-10-08 In Bloom, researcher and science writer Jeff Leach finds himself sitting around a campfire in a dry creek bed high in the rugged mountains of northern Namibia, wondering if the tribesmen on the other side of the fire, whom he had traveled 8,000 miles and to the farthest reaches of the world to find, held in their guts the microbial clues to some of the world's most devastating diseases. Modern humans are 99.9 percent similar genetically, but the genetic content of the trillions of microbes living on and in our bodies, our microbiome, can differ by as much as 90 percent. Like a precious family heirloom, our initial population of bacteria is handed down to us from our mother during birth. This founding population soon outnumbers our own cells ten to one, making us more microbe than mammal—a veritable superorganism—and plays a critical role in our health throughout life. Just how critical is now being revealed by an explosion in powerful molecular techniques that are providing an unprecedented glimpse into the part microbes play in conditions as diverse as diabetes, cancer, obesity, autoimmune diseases, heart disease, and more. In Bloom, Leach delves deep into our evolutionary past and traces forward the ecological, technological, and cultural events that have shaped the codevelopment of humans and our microbes. Modern lifestyle choices are dramatically impacting the health of our primal microbiome and, as a result, contributing to, or outright causing, many diseases. By looking backward to better understand the seasonal landscape that nurtured a normal—that is, healthy—microbiome, we just might find the clues to evolve ourselves into a better, disease-free future.

**Eat Bugs. Not Too Much. Mainly With Plants.** Jeff D. Leach,2008-10-01 As we fill our shopping carts and pantries with the latest neatly boxed and wrapped goodies of industry, we continue down a path that began some ten thousand years ago with the emergence of agriculture - an event that would eventually, along with steel roller mills in the 1880s, farm subsidies in the 1970s and an explosion of highly processed and packaged foods, lead to one of the greatest unintended consequences in human history: The shift in how and where the human body captures much-needed energy (calories) to power our demanding bodies and modern lifestyle. This little book is about that journey and a story about an unlikely cast of characters to whom we owe much of our current success as a species and any future success and health we may hope to achieve.

**Prebiotics** Jeff D. Leach, Glenn R. Gibson, Jan Van Loo, 2006 More than 10 years of research comprising thousands of studies support this exploration of prebiotics, nondigestible nutritional elements that will feature prominently on menus in coming health campaigns. Prebiotics, so named for their positive effect on beneficial bacteria in the lower intestine, are forms of fiber naturally found in foods such as garlic, onions, asparagus, and bananas. The studies discussed in this book point unequivocally to the connections between intestinal health and whole body health and, correspondingly, to the health dangers faced by the modern, prebiotic-deprived diet: colon cancer, heart disease, and obesity. Prebiotics are presented as key to reducing risks and boosting body functions from the immune system to mineral absorption. The expert information in this cutting-edge guide shows readers not just what prebiotics can do, but also how they can be incorporated into diets for maximum health benefits.

*Eden's Endemics* Elizabeth Callaway, 2020-08-04 In the past thirty years biodiversity has become one of the central organizing principles through which we understand the nonhuman environment. Its deceptively simple definition as the variation among living organisms masks its status as a hotly contested term both within the sciences and more broadly. In *Eden's Endemics*, Elizabeth Callaway looks to cultural objects—novels, memoirs, databases, visualizations, and poetry—that depict many species at once to consider the question of how we narrate organisms in their multiplicity. Touching on topics ranging from seed banks to science fiction to bird-watching, Callaway argues that there is no set, generally accepted way to measure biodiversity. Westerners tend to conceptualize it according to one or more of an array of tropes rooted in colonial history such as the Lost Eden, Noah's Ark, and Tree-of-Life imagery. These conceptualizations affect what kinds of biodiversities are prioritized for protection. While using biodiversity as a way to talk about the world aims to highlight what is most valued in nature, it can produce narratives that reinforce certain power differentials—with real-life consequences for conservation projects. Thus the choices made when portraying biodiversity impact what is visible, what is visceral, and what is unquestioned common sense about the patterns of life on Earth.

**Emboldened** Tara Beth Leach, 2017-11-14 Throughout Scripture and church history, women have been central to the mission of God. But all too often women have lacked opportunities to minister fully. Many churches lack visible examples of women in ministry and leadership. Pastor Tara Beth Leach issues a stirring call for a new generation of women in ministry: to teach, to preach, to shepherd, and to lead. God not only permits women to minister—he emboldens, empowers, and unleashes women to lead out of the fullness of who they are. The church cannot reach its full potential without women using their God-given gifts. Leach provides practical expertise for how women can find their place at the table, escape impostor syndrome, face opposition, mentor others, and much more. When women teach, preach, lead, evangelize, pastor, and disciple, and when men partner to embolden the women in their lives, the church's imagination expands to better reflect

God's story and hope for the world.

The Best Technology Writing 2010 Julian Dibbell, 2010-09-21 The iPad. The Kindle. Twitter. When the Best Technology Writing series was inaugurated in 2005, these technologies did not exist. Now they define our 21st-century lives. As Julian Dibbell writes in his introduction to The Best Technology Writing 2010, The digital is us. Yet for that reason, it is also something more, a lightning rod for our feelings about technology in general. Whether it is Sam Anderson's giddy but troubled defense of online distractions, David Carr's full-throated elegy to the dying world of pre-digital publishing, Steven Johnson's warm appreciation of Twitter's bite-size contributions to collective human intelligence, or Evan Ratliff's fascinating month-long quest to disappear without a digital trace, many of the essays gathered here register our intense and complicated fascination with digital media. But as Dibbell notes, these essays also remind us that some of the most disruptive and fascinating technologies continue to come from beyond the digital world. Jill Lepore's writing on the politics of breast-feeding gadgetry, Stephen Silberman's investigation of the placebo effect in pharmaceutical testing, Burkhard Bilger reporting on efforts to build a better cook stove for the developing world, and Tad Friend's profile of electric-car developer Elon Musk's efforts to head off environmental catastrophe all invite us to reflect on how many aspects of human experience remain fundamentally unchanged by digital technology. Packed with marvelous essays on technologies old and new, The Best Technology Writing 2010 is an outstanding addition to this fantastic (Cory Doctorow), fascinating (Chris Anderson) series. The Best Technology Writing 2010 includes essays written by: Sam Anderson Burkhard Bilger Joshua Bearman Mark Bowden David Carr Douglas Fox Tad Friend Ben Greenman Vanessa Grigoriadis James Harkin Adam Higginbotham Alex Hutchinson Steven Johnson Kevin Kelly Jill Lepore Alexis Madrigal Javier Marias Mike Massimino Evan Ratliff Daniel Roth Clay Shirky Steve Silberman Annie Trubek Lawrence Weschler
