The Optimum Imperative: Czech Architecture for the Socialist Lifestyle, 1938-1968 Ana Miljacki, 2017-02-03 The Optimum Imperative examines architecture's multiple entanglements within the problematics of Socialist lifestyle in postwar Czechoslovakia. Situated in the period loosely bracketed by the signing of the Munich accords in 1938, which affected Czechoslovakia's entrance into World War II, and the Warsaw Pact troops' occupation of Prague in 1968, the book investigates three decades of Czech architecture, highlighting a diverse cast of protagonists. Key among them are the theorist and architect Karel Honzík and a small group of his colleagues in the Club for the Study of Consumption; the award-winning Czechoslovak Pavilion at the 1958 World Expo in Brussels; and SIAL, a group of architects from Liberec that emerged from the national network of Stavoprojekt offices during the reform years, only to be subsumed back into it in the wake of Czechoslovak normalization. This episodic approach enables a long view of the way that the project of constructing Socialism was made disciplinarily specific for architecture, through the constant interpretation of Socialist lifestyle, both as a narrative framework and as a historical goal. Without sanitizing history of its absurd contortions in discourse and in daily life, the book takes as its subject the complex and dynamic relationships between Cold War politics, state power, disciplinary legitimating narratives, and Czech architects' optimism for Socialism. It proposes that these key dimensions of practicing architecture and building Socialism were intertwined, and even commensurate at times, through the framework of Socialist lifestyle.

Structural Engineering, Mechanics and Computation A. Zingoni, 2001-03-16 Following on from the International Conference

on Structural Engineering, Mechanics and Computation, held in Cape Town in April 2001, this book contains the Proceedings, in two volumes. There are over 170 papers written by Authors from around 40 countries worldwide. The contributions include 6 Keynote Papers and 12 Special Invited Papers. In line with the aims of the SEMC 2001 International Conference, and as may be seen from the List of Contents, the papers cover a wide range of topics under a variety of themes. There is a healthy balance between papers of a theoretical nature, concerned with various aspects of structural mechanics and computational issues, and those of a more practical nature, addressing issues of design, safety and construction. As the contributions in these Proceedings show, new and more efficient methods of structural analysis and numerical computation are being explored all the time, while exciting structural materials such as glass have recently come onto the scene. Research interest in the repair and rehabilitation of existing infrastructure continues to grow, particularly in Europe and North America, while the challenges to protect human life and property against the effects of fire, earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings, bridges and other engineering structures.

Landscapes of Communism Owen Hatherley, 2016-03-01 When communism took power in Eastern Europe it remade cities in its own image, transforming everyday life and creating sweeping boulevards and vast, epic housing estates in an emphatic declaration of a noncapitalist idea. The regimes that built them are now dead and long gone, but from Warsaw to Berlin, Moscow to postrevolutionary Kiev, the buildings remain, often populated by people whose lives were scattered by the collapse of communism. *Landscapes of Communism* is a journey of historical discovery, plunging us into the lost world of socialist architecture. Owen Hatherley, a brilliant, witty, young urban critic shows how power was wielded in these societies by tracing the sharp, sudden zigzags of official communist architectural style: the superstitious despotic rococo of high Stalinism, with its jingoistic memorials, palaces, and secret policemen's castles; East Germany's obsession with prefabricated concrete panels; and the metro systems of Moscow and Prague, a spectacular vindication of public space that went further than any avant-garde ever dared. Throughout his journeys across the former Soviet empire, Hatherley asks what, if anything, can be reclaimed from the ruins of Communism—what residue can inform our contemporary ideas of urban life?

Terms of Appropriation Amanda Reeser Lawrence, Ana Miljački, 2017-12-06 This collection focuses on how architectural material is transformed, revised, swallowed whole, plagiarized, or in any other way appropriated. It charts new territory within this still unexplored yet highly topical area of study by establishing a shared vocabulary with which to discuss, or contest, the workings of appropriation as a vital and progressive aspect of architectural discourse. Written by a group of rising scholars in the field of architectural history and criticism, the chapters cover a range of architectural subjects that are linked in their investigations of how architects engage with their predecessors.

Contested Czech Cities Michaela Pixová, 2019-11-15 This research was supported by Grant no. 14-24977P from the Grant Agency of the Czech Republic as part of the project "Contested Czech cities: Citizen participation in post-socialist urban restructuring. This book focuses on urban grassroots movements in post-socialist Czechia and their struggle against unprofessional and nondemocratic urban processes in their cities. It shows that in the context of neoliberal urban restructuring, weakly consolidated democracy, and corporate capture of the local state, urban activists often resort to entering electoral competition as the only efficient way of improving the situation in their cities. The book is based on four case studies from different Czech cities, narrating stories of activists struggling against a controversial flood protection project, the demolition of public buildings, an unhealthy land-use plan, arrogant development, and overpriced city halls. It offers valuable insight into the obstacles created by institutionalized forms of power abuse which urban activists must deal with and discusses the pro-democratic potential of urban grassroots movements' efforts to overcome their limited ability to influence political processes via standard means of civic engagement and protest activities.

Dynamic Response of Lattice Towers of the Technical Committee on Special Structures and the Technical Administrative Committee on Metals of the Structural Engineering Institute of ASCE. This report is a compilation and clarification of current methodologies for the dynamic response of communication towers in a single source. The information regarding the dynamic response of lattice towers is currently scattered throughout the literature, making it difficult for the practicing engineer to obtain the information necessary for design purposes. Both self-supporting lattice towers and guyed lattice masts (guyed lattice towers) are included. Topics include: Ødynamics of cables and towers, Ødynamic analysis, Øwind loads and response, Øseismic input and response, and Øvibration control.

Team 10 East Lukasz Stanek,2014-05-15 This volume coins the term “Team 10 East” as a conceptual tool to discuss the work of Team 10 members and fellow travelers from state-socialist countries—such as Oskar Hansen of Poland, Charles Polónyi of Hungary, and Radovan Nikšić of Yugoslavia. This new term allows the book’s contributors to approach these individuals from a comparative perspective on socialist modernism in Central and Eastern Europe and to discuss the relationship between modernism and modernization across the Iron Curtain. In so doing, Team 10 East addresses “revisionism” in state-socialist architecture and politics as well as shows how Team 10 East architects appropriated, critiqued, and developed postwar modernist architecture and functionalist urbanism both from within and beyond the confines of a Europe split by the Cold War.
