*21st Century Jet* Karl Sabbagh,1996 The first large passenger jet designed completely by computer, the 777 is more complex and innovative than any other airliner ever built. Sabbagh has been granted virtually unlimited access to the creation of the 777, resulting in a great business story and a clear explanation of the scientific and engineering principles behind jet flight. Published in conjunction with a PBS series airing in January. 16-page photo insert. Illustrations.

*Jet Age* Sam Howe Verhovek,2010-10-14 The captivating story of the titans, engineers, and pilots who raced to design a safe and lucrative passenger jet. In *Jet Age*, journalist Sam Howe Verhovek explores the advent of the first generation of jet airliners and the people who designed, built, and flew them. The path to jet travel was triumphal and amazingly rapid-less than fifty years after the Wright Brothers' first flight at Kitty Hawk, Great Britain led the world with the first commercial jet plane service. Yet the pioneering British Comet was cursed with a tragic, mysterious flaw, and an upstart Seattle company put a new competitor in the sky: the Boeing 707 Jet Stratoliner. *Jet Age* vividly recreates the race between two nations, two global airlines, and two rival teams of brilliant engineers for bragging rights to the first jet service across the Atlantic Ocean in 1958. At the center of this story are great minds and courageous souls, including Sir Geoffrey de Havilland, who spearheaded the development of the Comet, even as two of his sons lost their lives flying earlier models of his aircraft; Sir Arnold Hall, the brilliant British aerodynamicist tasked with uncovering the Comet's fatal flaw; Bill Allen, Boeing's deceptively mild-mannered president; and Alvin Tex Johnston, Boeing's swashbuckling but supremely skilled test pilot. The extraordinary airplanes themselves emerge as characters in the drama. As the Comet and the Boeing 707 go head-to-head, flying twice as fast and high as the propeller planes that preceded them, the book captures the electrifying spirit of an era: the Jet Age. In the spirit of Stephen Ambrose's *Nothing Like It in the World*, Verhovek's *Jet Age* offers a gorgeous rendering of an exciting age and fascinating technology that permanently changed our conception of distance and time, of a triumph of engineering and design, and of a company that took a huge gamble and won.

**Roaring Thunder** Walter J. Boyne,2007-04-01 The story of the jet age of aviation revolves around remarkable geniuses--including Sir Frank Whittle, the British inventor of the jet engine; Hans von Ohain, a German jet engine designer who comes to work for the U.S.; famed aeronautical engineer Kelly Johnson; the daring test pilot Tex Johnston, and many more--brilliant men who conceived these early extraordinary airplanes and had the courage to fly them to new horizons. *Roaring Thunder* blends real life adventures of the industry giants with the fictional Vance Shannon and his aviation family. Shannon, a prototypical American test pilot, sees and guides the birth of American jet aviation, while his sons, Tom and Harry fly the new jets in combat. Their aviation careers are blessed by their skill and courage, and they help usher in the greatest advance in aviation history with the birth of the jet transport. The Shannons serve as counterparts to the real-life heroes, creating continuity and explaining the intricacies, successes, and setbacks of a brand new industry. The dramatic, totally accurate story of the beginning of the jet age is presented against a background of

personalities, real and fictional who bring the story to life, and represent the first stage in the first ever fiction trilogy about the history of the aerospace industry. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

*Inductive Measurement of Plasma Jet Electrical Conductivity* M. W. Turner,2001 Measurement of plasma jet electrical conductivity has utility in the development of explosively driven magnetohydrodynamic (MHD) energy converters as well as magnetic flux compression reaction chambers for nuclear/chemical pulse propulsion and power. Within these types of reactors, the physical parameter of critical importance to underlying MHD processes is the magnetic Reynolds number, the value of which depends upon the product of plasma electrical conductivity and velocity. Therefore, a thorough understanding of MHD phenomena at high magnetic Reynolds number is essential, and methods are needed for the accurate and reliable measurement of electrical conductivity in high-speed plasma jets. It is well known that direct measurements using electrodes suffer from large surface resistances, and an electrodeless technique is desired.
