**Remote Sensing with Polarimetric Radar** Harold Mott, 2006-12-05 Discover the principles and techniques of remote sensing with polarimetric radar This book presents the principles central to understanding polarized wave transmission, scattering, and reception in communication systems and polarimetric and non-polarimetric radar. Readers gain new insight into the methods for remotely gathering data about the earth's surface and atmosphere with polarimetric synthetic-aperture radar and polarimetric interferometry, including the changes that take place with seasons, floods, earthquakes, and other natural phenomena. In particular, with the book's focus on polarimetric radars, readers discover how to exploit the many special features of these systems, which provide the maximum amount of information that can be obtained remotely with radar. Introductory-level coverage of electromagnetic wave propagation, antennas, radar and synthetic aperture radar, probability and random processes, and radar interferometry serves as a foundation for advancing to more complex material. A more advanced mathematical and technical treatment enables readers to fully grasp polarized wave transmission, propagation, and reception in communication systems and polarimetric-radar remote sensing. Readers will discover much new material in this text, including: Distinguishing between coherently-measured and incoherently-measured target matrices for power, recognizing that the two matrix types are not equivalent in representing targets Removing unpolarized components from the scattered wave and deriving a target matrix for classification from the resulting coherently-scattered wave Selecting an antenna polarization to maximize the contrast between desired and undesired depolarizing targets Problems ranging in complexity from introductory to challenging are presented throughout the text. Engineers will find this an ideal reference to help them fully utilize the powerful capabilities of polarimetric radar. It will also help agronomists, geographers, meteorologists, and other scientists who use remotely obtained data about the earth to evaluate procedures and better interpret the data. The book can also be tailored to both undergraduate and graduate courses in remote sensing, and recommendations are given for text material suitable for such courses.

*Fractional Order Processes* Seshu Kumar Damarla, Madhusree Kundu, 2018-09-03 The book presents efficient numerical methods for simulation and analysis of physical processes exhibiting fractional order (FO) dynamics. The book introduces FO system identification method to estimate parameters of a mathematical model under consideration from experimental or simulated data. A simple tuning technique, which aims to produce a robust FO PID controller exhibiting iso-damping property during re-parameterization of a plant, is devised in the book. A new numerical method to find an equivalent finite dimensional integer order system for an infinite dimensional FO system is developed in the book. The book also introduces a numerical method to solve FO optimal control problems. Key features Proposes generalized triangular function operational matrices. Shows significant applications of triangular orthogonal functions as well as triangular strip operational matrices in simulation, identification and control of fractional order processes. Provides numerical methods for simulation of physical problems involving different types of weakly singular integral equations, Abel's integral equation, fractional order integro-differential equations, fractional order differential and differential-algebraic equations, and fractional order partial differential equations. Suggests alternative way to do numerical computation of fractional order signals and systems and control. Provides source codes developed in MATLAB for each chapter, allowing the interested reader to take advantage of these codes for broadening and enhancing the scope of the book itself and developing new results.

*The Fires Beneath* Seán Morrow,2016-06-01 The life of Monica Wilson is a story of groundbreaking scholarship, passionate creativity and personal tragedy during South Africa's bitter and divided twentieth century. As a young anthropologist in the 1930s, Monica immersed herself in the lives, work and beliefs of African communities in southern and East Africa, while carefully observing the effects of historical change. At the core of her existence was her intellectual collaboration and intense personal relationship with her husband, the brilliant but clinically depressive Godfrey Wilson, who took his own life in 1944. After Godfrey's death, Monica raised their two children and built a career as a leading academic, at Fort Hare, Rhodes University College and the University of Cape Town. In a political environment where black academics were under constant threat and ideas were censored, she outspokenly advocated racial equality and freedom of speech, her publications emphasising a common South African identity and implicitly challenging apartheid 'separate development'. This fascinating biography moves between the Eastern Cape, Cambridge, Tanganyika, Nyasaland, Northern Rhodesia and Cape Town. It explores the relationship between anthropology and history, and the tensions between liberalism, Christianity, Marxism and apartheid ideology. Drawing on the letters and diaries left by Monica and Godfrey Wilson, this is a powerful story about politics, race, war, faith, love and loss.
