*Mask of the Sun: The Science, History and Forgotten Lore of Eclipses* John Dvorak, 2017-03-07 They have been thought of as harbingers of evil as well as a sign of the divine. Eclipses—one of the rarest and most stunning celestial events we can witness here on Earth—have shaped the course of human history and thought since humans first turned their eyes to the sky. What do Virginia Woolf, the rotation of hurricanes, Babylonian kings and Einstein's General Theory of Relativity all have in common? Eclipses. Always spectacular and, today, precisely predictable, eclipses have allowed us to know when the first Olympic games were played and, long before the first space probe, that the Moon was covered by dust. Eclipses have stunned, frightened, emboldened and mesmerized people for thousands of years. They were recorded on ancient turtle shells discovered in the Wastes of Yin in China, on clay tablets from Mesopotamia and on the Mayan "Dresden Codex. They are mentioned in Homer's Iliad and Odyssey and at least eight times in the Bible. Columbus used them to trick people, while Renaissance painter Taddeo Gaddi was blinded by one. Sorcery was banished within the Catholic Church after astrologers used an eclipse to predict a pope's death. In *Mask of the Sun*, acclaimed writer John Dvorak the importance of the number 177 and why the ancient Romans thought it was bad to have sexual intercourse during an eclipse (whereas other cultures thought it would be good luck). Even today, pregnant women in Mexico wear safety pins on their underwear during an eclipse. Eclipses are an amazing phenomena—unique to Earth—that have provided the key to much of what we now know and understand about the sun, our moon, gravity, and the workings of the universe. Both entertaining and authoritative, *Mask of the Sun* reveals the humanism behind the science of both lunar and solar eclipses. With insightful detail and vividly accessible prose, Dvorak provides explanations as to how and why eclipses occur—as well as insight into the forthcoming eclipse of 2017 that will be visible across North America.

The Last Volcano John Dvorak, 2015-12-15 John Dvorak, the acclaimed author of *Earthquake Storms*, looks into the early scientific study of volcanoes and the life of the man who pioneered the field, Thomas Jaggar. Educated at Harvard, Jaggar went to the Caribbean after Mount Pelee exploded in 1902, killing more than 26,000 people. Witnessing the destruction and learning about the horrible deaths these people had suffered, Jaggar vowed to dedicate himself to a study of volcanoes. In 1912, he built a small science station at the edge of a lake of molten lava at Kilauea volcano in the Hawaiian Islands. Jaggar found something else at Kilauea: true love. For more than twenty years, Jaggar and Isabel Maydwell ran the science station, living in a small house at the edge of a high cliff that overlooked the lava lake, Maydwell quickly becoming one of the world's most astute observers of volcanic activity. Mixed with tales of myths and rituals, as well as the author's own experiences and insight into volcanic activity, *The Last Volcano* reveals the lure and romance of confronting nature in its most magnificent form—the edge of a volcanic eruption.
