Virtual Music Shara Rambarran, 2021-04-08 Virtuality has entered our lives making anything we desire possible. We are, as Gorillaz once sang, in an exciting age where 'the digital won't let [us] go...' Technology has revolutionized music, especially in the 21st century where the traditional rules and conventions of music creation, consumption, distribution, promotion, and performance have

been erased and substituted with unthinkable and exciting methods in which absolutely anyone can explore, enjoy, and participate in creating and listening to music. *Virtual Music* explores the interactive relationship of sound, music, and image, and its users (creators/musicians/performers/audience/consumers). Areas involving the historical, technological, and creative practices of virtual music are surveyed including its connection with creators, musicians, performers, audience, and consumers. Shara Rambarran looks at the fascination and innovations surrounding virtual music, and illustrates key artists (such as Grace Jones, The Weeknd), creators (such as King Tubby, Kraftwerk, MadVillain, Danger Mouse), audiovisuals in video games and performances (such as Cuphead and Gorillaz), audiences, and consumers that contribute in making this musical experience a phenomenon. Whether it is interrogating the (un)realness of performers, modified identities of artists, technological manipulation of the Internet, music industry and music production, or accessible opportunities in creativity, the book offers a fresh understanding of virtual music and appeals to readers who have an interest in this digital revolution.

This edited book covers the state of the art in sound and robotics, aiming to gather existing approaches in a combined volume. Collecting chapters from world-leading academic and industry authors, *Sound and Robotics: Speech, Non-Verbal Audio and Robotic Musicianship* explores how robots can communicate through speech, non-verbal audio and music. The first set of chapters explores how robots use verbal communication, considering the possibilities of speech for human-robot interaction. The second section shifts to roles of non-verbal communication in HRI, including consequential sound, sonification and audio cues. The third and final section describes current approaches to robotic musicianship and their evaluation.
