**Growth And Inflation In The Soviet Economy** Fyodor I

Kushnirsky,2019-09-10 While growth figures are high for Soviet industry in general, they are especially impressive for the MBMW sector which has far outperformed other sectors of the economy. The question widely debated in the U.S.S.R. now is whether these impressive figures actually reflect the growth of physical output. To put it differently, did the Soviet economy receive more machines and equipment as a result of this growth, and, if so, was the rate of real growth the same as the growth in value terms? But why would one raise such a question in the first place? To answer this and similar questions, the procedures of Soviet measurement of output, productivity, costs and prices have been analyzed in this study. Special attention is given to the processes of planning quality improvements and pricing new technological items. An analysis of procedures and methodological instructions used in planning and pricing MBMW products may be helpful in revealing possible discrepancies between prices of new goods and their quality characteristics.

Flight Craft 6: Ily'yushin/Beriyeve A-50 Yefim Gordon,2015-04-30

Brought out in the late 1970s as a successor to the obsolete Tu-126 airborne early warning aircraft, the A-50 co-developed by the Ily'yushin and Beriyeve bureaux is one of the most interesting military variants in the field of IL-76 military transport. Differing outwardly from the latter mainly in having a conventional "saucer" rotodome, the A-50 entered flight testing in 1980; the new Soviet AWACS entered service four years later. The improved A-50M was developed several years after that. The type continues in service with the

Russian Air Force today, and the fleet is being upgraded to A-50U standard. ??This book describes the A-50's thrilling developmental history, taking in its many variants (including the A-50EI export model for India) and gives an extensive overview of the various scale model kits covering the subject currently available on the market.

**Looking Down the Corridors** Kevin Wright, Peter

Jefferies, 2015-05-04 Between 1945 and 1990 the Western Allies mounted some of the most audacious and successful intelligence collection operations of the Cold War. Conducted in great secrecy, aircrews flew specially modified transport and training aircraft along the Berlin Air Corridors and Control Zone to gather intelligence on Soviet and East German military targets in the German Democratic Republic and around Berlin. The Air Corridors comprised three regulated airways for civil and military air traffic that connected West Berlin to West Germany. Operating under the guise of innocent transport and training flights, the pilots used their right of access to gather huge amounts of imagery for forty-five years. They also provided the western intelligence community with unique knowledge of the organisation and equipment used by Warsaw Pact forces. For the first time, using recently declassified materials and extensive interviews with those involved, *Looking Down the Corridors* provides a detailed account and analysis of these operations and their unique contribution to the Cold War.

Heavy-Duty Wheeled Vehicles Boris Nikolaevich

Belousov, Sergey D Popov, 2014-01-27 Heavy-duty wheeled vehicles (HDWVs) are all-wheel-drive vehicles that carry 25 tons or more and have three or more axles. They transport heavy, bulky cargo such as raw minerals, timber, construction materials, pre-fabricated modules, weapons, combat vehicles, and more. HDWVs are used in a variety of industries (mining, logging, construction, energy) and are critical to a country's economy and defense. These vehicles have unique development requirements due to their high loads, huge dimensions, and specific operating conditions. Hauling efficiencies can be improved by increasing vehicle load capacity; however capacities are influenced by legislation, road limits, and design. Designing HDWVs differs from other multi-purpose all-wheel-drive vehicles. The chassis must be custom-designed to suit the customer's particular purpose. The number of axles is another variable, as well as which ones are driving and which are driven. Tires are also customizable. Translated by SAE from Russian, this book narrates the history of HDWVs and presents the theory and calculations required to design them. It summarizes results of the authors' academic research and experience and presents innovative technical solutions used for electric and hydrostatic transmissions, steering systems, and active safety of these vehicles. The book consists of three parts. Part one covers HDWV design history and general design methods, including basic vehicle design, and evaluating HDWV use conditions. Part one also covers general

operation requirements and consumer needs, and a brief analysis of structural components of existing HDWVs and prototypes. Part two outlines information needs for designing HDWVs. Part three reviews basic theory and calculation of innovative technical solutions, as well as special requirements for component parts. This comprehensive title provides the following information about HDWVs: • History of design and manufacture. • Manufacturers' summary design data. • Background data on sample vehicles. • Component calculation examples. • Overview of motion theory, which is useful in design and placement of bulky cargo.
