Understanding and Interpreting Economic Structure Geoffrey J.D. Hewings, Michael Sonis, Moss Madden, Yoshio Kimura, 2013-06-29 In 1976, volume 116 of the Lecture Notes in Economics and Mathematical Systems appeared in the library of the University of Illinois. The title of the book, Input-Output Analysis and the Structure of Income Distribution was sufficiently intriguing to one of the present editors (Hewings) to command attention. Some years later, during the First World Congress of the Regional Science Association in Cambridge Massachusetts in 1980, Madden and Batey presented some of their work using their now familiar demographic-economic modeling system. Discussion ensued about the relationship between this system, Miyazawa's formulation and the social accounting matrices most closely associated with the work of Stone. During a year's residence at the University of Illinois, Batey was able to produce a valuable typology of multipliers that began the process of integrating these several modeling systems into a coherent package. Thereafter, a number of regional scientists have exploited the ideas and insights proposed by Miyazawa, especially the notion of the interrelational income multiplier and the ideas of internal and external multipliers.

TURKISH ECONOMIC ASSOCIATION INTERNATIONAL CONFERENCE ON ECONOMICS ICE-TEA 2018 Ercan Uygur,Huseyin Karamelikli,2018-12-31

Frontiers of Environmental Input-Output Analysis Shigemi Kagawa,2011-08-26 Input-Output Analysis (IOA) is widely used in the field of ecological economics, industrial ecology, and environmental sciences. Industrial Ecology (IE) and Ecological Economics (EE) are promising and growing fields. IOA plays a crucial role in analyzing the related environmental and resource issues and providing quantitative information to many research questions and policy implications. The major aim of this book is to provide not only a comprehensive overview of environmental IOA from 1930s to the present but also the frontiers of environmental IOA including energy structural decomposition analysis, spatial energy structural decomposition analysis, multi-regional waste make-use analysis, augmented waste input-output analysis, dynamic structural decomposition analysis with product lifetime distributions, and endogenous input-output analysis with product lifetime distributions to professionals, practitioners, and students. This book presents a novel dynamic structural decomposition analysis to evaluate the effects of the product lifetime shifts and structural changes such as technological changes and final demand shifts on the life cycle energy consumptions. It also contributes to modelling a simple social accounting method with cumulative product lifetime distributions and argues how product lifetime extension affects energy consumptions and income flow throughout the entire economic system. The book demonstrates the author's expertise in IOA and is an essential read for students and scholars in the field.

Pigs and Humans Umberto Albarella,Keith Dobney,Anton Ervynck,Peter Rowley-Conwy,2007-12-06 Pigs are one of the most iconic but also paradoxical animals ever to have

developed a relationship with humans. This relationship has been a long and varied one: from noble wild beast of the forest to mass produced farmyard animal; from a symbol of status and plenty to a widespread religious food taboo; from revered religious totem to a parodied symbol of filth and debauchery. *Pigs and Humans* brings together some of the key scholars whose research is highlighting the role wild and domestic pigs have played in human societies around the world over the last 10,000 years. The 22 contributors cover a broad and diverse range of temporal, geographical, and topical themes, grounded within the disciplines of archaeology, zoology, anthropology, and biology, as well as art history and history. They explore such areas as evolution and taxonomy, domestication and husbandry, ethnography, and ritual and art, and present some of the latest theories and methodological techniques. The volume as a whole is generously illustrated and will enhance our understanding of many of the issues regarding our complex and ever changing relationship with the pig.

Japan Encyclopedia Louis Fr?d?ric, Louis-Frédéric, 2002 Knowing Japan and the Japanese better, Louis Frédéric states in the introduction to this encyclopedia, is one of the necessities of modern life. The Japanese have a profound knowledge of every aspect and detail of Western societies. Unfortunately, we in the West cannot say the same about our knowledge of Japan. We tend to see Japan through a veil of exoticism, as a land of ancient customs and exquisite arts; or we view it as a powerful contributor to the global economy, the source of cutting-edge electronics and innovative management techniques. To go beyond these clichés, we must begin to see how apparently contradictory aspects of modern Japanese culture spring from the country's evolution through more than two millennia of history. This richly detailed yet concise encyclopedia is a guide to the full range of Japanese history and civilization, from the dawn of its prehistory to today, providing clear

and accessible information on society and institutions, commerce and industry, sciences, sports, and politics, with particular emphasis on religion, material culture, and the arts. The volume is enhanced by maps and illustrations, along with a detailed chronology of more than 2,000 years of Japanese history and a comprehensive bibliography. Cross-references and an index help the reader trace themes from one article to the next. Japan Encyclopedia will be an indispensable one-volume reference for students, scholars, travelers, journalists, and anyone who wishes to learn more about the past and present of this great world civilization.

Chlorinated Paraffins C. de Boer, 2010-06-17 Chlorinated paraffins are one of the last classes of chlorinated compounds that are still being produced worldwide and used in high quantities in many applications. They are particularly used in cutting oils in the metal industry, but also as lubricants, plasticizers, flame retardants and as additives in adhesives, rubber, paints and sealants. This volume covers the state-of-the-art of methods for the synthesis and analysis of chlorinated paraffins. Experts in the field provide an overview of their worldwide occurrence and utilization and describe their toxicological properties. International regulations and production volumes are presented as well as an example of a risk assessment study that was carried out in Japan. This book is a valuable and comprehensive source of information for environmental scientists interested in the occurrence and toxicology of chlorinated paraffins and for authorities and producers.

Tourism and Regional Science Soushi Suzuki, Karima Kourtiti, Peter Nijkamp, 2021-07-27 This book provides new roads, perspectives, and a synthesis for tourism and regional science research. Tourism has become one of the most dynamic sectors in the economy and has exhibited a structurally growing importance over the past decades. In many countries the economic significance of tourism now exceeds that of traditionally strong sectors like agriculture or transportation. It is

noteworthy that in recent times, tourism research has gained great momentum from the perspective of: the leisure society; the psychological tension between hard work and a more relaxed lifestyle; and the productivity-enhancing or productivity-diminishing effects of leisure, recreation, and tourism. An abundance of new literature in the field of tourism management can also be found, for instance, in the areas of hospitality management, cultural events management, destination competitiveness policy and marketing, and transportation and logistics strategies, while much attention is also being paid to the opportunities provided by digital technology for the tourism sector. In addition, in the light of the many negative externalities of a rapidly growing tourism sector, there is also an abundant literature on the environmental and sustainability effects of tourism. This book has the following objectives: to explore the interwoven connection between regional science and tourism research; to suggest promising pathways for innovative regional science research at the interface of tourism and space; and to demonstrate the need for a new perspective on the tourism and regional science nexus by means of empirical studies.

Socioeconomic Environmental Policies and Evaluations in Regional Science Hiroyuki Shibusawa, Katsuhiro Sakurai, Takeshi Mizunoya, Susumu Uchida, 2016-09-07 This book is a volume of essays celebrating the life and work of Yoshiro Higano, professor of Environmental Policy, Doctoral Program in Sustainable Environmental Studies, Graduate School of Life and Environmental Sciences, University of Tsukuba, Japan. Prof. Higano's research strongly focuses on the comprehensive evaluation of resources and research content for decision science and engineering, including simulation modeling for environmental quality control, the evaluation of environmental remediation technologies, integrated river (lake) basin management, and synthesized environmental policy. Yoshiro Higano is the past president of the Regional Science Association International (RSAI)

and the current president of the Japan Section of the RSAI (JSRSAI). He also served as executive secretary for the Pacific Regional Science Conference Organizations (PRSCO). This edited volume covers a wide range of regional science approaches, theory, policy, evaluation, modeling, simulation, and practice. It is a valuable reference work for researchers, scholars, policy makers, and students in the field of regional science. The volume celebrates Prof. Higano's contributions to the JSRSAI, PRSCO, and RSAI. Essay contributors include his former students and a wide array of regional scientists, each with a personal connection to Prof. Higano.

Japan after 3/11 Pradyumna P. Karan, Unryu Suganuma, 2016-09-27
On March 11, 2011, an underwater earthquake off the Pacific coast of Tohoku, Japan, triggered one of the most devastating tsunamis of a generation. The aftermath was overwhelming: communities were reduced to rubble, thousands of people were missing or dead, and relief organizations struggled to reach affected areas to provide aid for survivors and victims of radiation from compromised nuclear reactors. In Japan after 3/11, editors Pradyumna P. Karan and Unryu Suganuma assemble geographers, economists,

humanists, and scientists to consider the complex economic, physical, and social impacts of this heartbreaking disaster. Historical geographers place the events of March 2011 in context, while other contributors assess the damage and recommend strategies for the long process of reclamation and rebuilding. The book also includes interviews with victims that explore the social implications of radioactive contamination and invite comparisons to the discrimination faced by survivors of the Hiroshima and Nagasaki bombings. Balancing the natural and social sciences, this timely volume offers not only a model of interdisciplinary research for scholars but also an invaluable guide to the planning and implementation of reconstruction.
