Troubled Partnership Mark A. Lorell,1995 The United States has generally tried to discourage its allies from developing their own major weapons systems, to promote equipment standardization with U.S. forces, and tie allied security policies more firmly to U.S. interests. Japan's FS-X fighter is perhaps the most prominent example of this policy. Japan had originally intended to design and build an indigenous fighter; the Pentagon urged Japan to buy an existing U.S. fighter. After difficult negotiations, the two sides eventually agreed to lightly modify the U.S. F-16 jointly to meet Japan's special needs. But as a result of political controversies over technology transfer and trade, the U.S. side focused increasingly on the economic aspects of the program. Under cover of these controversies, the Japanese have been able to move the FS-X design and technology applications ever farther away from the F-16 toward a much more nearly indigenous creation. In the end, the FS-X program has failed to meet many of the original U.S. expectations, and Japan has reaped an unexpected reward--experience in developing a world-class fighter aircraft. This book presents a history of the program, while a companion volume, MR-612/1-AF, summarizes and assesses the program.

Troubled Partnership Mark A. Lorell,1996-01-01 During World War II, Japanese fighters, such as the famed Zero, were among the most respected and feared combat aircraft in the world. But for decades following the defeat of Japan in 1945, a variety of political and economic factors prevented Japan from developing its own modern national fighter. This changed in the 1980s. Japan began independently developing its first world-class fighter since World War II. After several years of contentious negotiations, the Japanese agreed to work with the United States to cooperatively develop a minimally modified F-16, the FS-X. The new fighter, however, has evolved into a world-class aircraft developed largely by Japanese industry primarily due to errors committed by the U.S. side. By the fall of 1995, fifty years after the end of World War II, the Zero for the 1990s will have made its first flight, catapulting Japan into the elite ranks of nations capable of developing the most advanced weapon systems. In *Troubled Partnership*, Mark Lorell traces the evolution of the FS-X, disclosing the conflicting economic and security objectives advanced by U.S. officials, the flawed U.S. policy of technology reciprocity, and the challenges of international collaboration. Its deep intimacy with the interplay of policy and economy will make this volume of intense interest to political scientists, military studies specialists, historians, and government officials.

The Chemical Transformations of C1 Compounds Xiao-Feng Wu,Buxing Han,Kuiling Ding,Zhongmin Liu,2022-07-18 The Chemical Transformations of C1 Compounds A comprehensive exploration of one-carbon molecule transformations The chemistry of one-carbon molecules has recently gained significant prominence as the world transitions away from a petroleum-based economy to a more sustainable one. In *The Chemical Transformations of C1 Compounds*, an accomplished team of chemists delivers an in-depth overview of recent developments in the field of single-carbon chemistry. The three-volume book covers all major C1 sources, including carbon monoxide, carbon dioxide, methane, methanol, formic acid, formaldehyde, carbenes, C1 halides, and organometallics. The editors have included resources discussing the main reactions and transformations into feedstock chemicals of each of the major C1 compounds reviewed in dedicated chapters. Readers will discover cutting-edge material on organic transformations with MeNO₂, DMF, DCM, methyl organometallic reagents, CCl₄, CHCl₃, and CHBr₃, as well as recent achievements in cyanation reactions via cross-coupling. The book also offers: Thorough introductions to chemical transformations of CH₄, methods of CH₄ activation, chemical transformations of CH₃OH and synthesis alkenes from CH₃OH Comprehensive explorations of the carbonylation of MeOH, CH₂O in organic synthesis, organic transformations of HCO₂H, and hydrogen generation from HCO₂H Practical discussions of the carbonylation of unsaturated bonds with heterogeneous and homogeneous catalysts, as well as the carbonylation of C(sp²)-X bonds and C(sp³)-X bonds In-depth examinations of carbonylative C-H bond activation and radical carbonylation Perfect for organic and catalytic chemists, *The Chemical Transformations of C1 Compounds* is also an ideal resource for industrial chemists, chemical engineers, and practitioners at energy supply companies.

Applied Approaches to Societal Institutions and Economics Tohru Naito,Woohyung Lee,Yasunori Ouchida,2017-09-21 This book gives readers the theoretical and empirical methods to analyze applied economics. They are institutional economics, information economics, environmental economics, international economics, financial economics, industrial organization, public economics, law and economics, and spatial economics. Because the chapters of this book deal with current topics in these categories, they are relevant not only to researchers and graduate students but also to policy makers and entrepreneurs. As there is uncertainty about the global economy, it is necessary to consider optimal, efficient behavior to survive in the confused world. The book is organized in three parts. Part 1 deals with institutional economics, information economics, and related topics, approached through game theory. Part 2 focuses on environmental economics, international economics, and financial economics, through a microeconomic or econometric approach. Finally, Part 3 concentrates on public economics, social security, and related fields, through microeconomics or macroeconomics.

Dynamics of Ordering Processes in Condensed Matter S. Komura,2012-12-06 The International Symposium on Dynamics of Ordering Processes in Condensed Matter was held at the Kansai Seminar House, Kyoto, for four days, from 27 to 30 August 1987, under the auspices of the Physical Society of Japan. The symposium was financially supported by the four organizations and 45 companies listed on other pages in this volume. We are very grateful to all of them and particularly to the greatest sponsor, the Commemorative Association for the Japan World Exposition 1970. A total of 22 invited lectures and 48 poster presentations were given and 110 participants attended from seven nations. An objective of the Symposium was to review and extend our present

understanding of the dynamics of ordering processes in condensed matters, (for example, alloys, polymers and fluids), that are brought to an un stable state by sudden change of such external parameters as temperature and pressure. A second objective, no less important, was to identify new fields of science that might be investigated by similar, but sometimes more sophisticated, concepts and tactics. An emphasis was laid on those universal aspects of the laws governing the ordering processes which transcended the detailed differences among the substances used. The 71 lectures reproduced in this volume bear witness to the success of the Symposium in meeting amply the first objective and, to a lesser extent, the second.
