The Wages of Affluence Andrew Gordon,2001-11-15 Andrew Gordon goes to the core of the Japanese enterprise system, the workplace, and reveals a complex history of contest and confrontation. The Japanese model produced a dynamic economy which owed as much to coercion as to happy consensus. Managerial hegemony was achieved only after a bitter struggle that undermined the democratic potential of postwar society. The book draws on examples across Japanese industry, but focuses in depth on iron and steel. This industry was at the center of the country's economic recovery and high-speed growth, a primary site of corporate managerial strategy and important labor union initiatives. Beginning with the Occupation reforms and their influence on the workplace, Gordon traces worker activism and protest in the 1950s and '60s, and how they gave way to management victory in the 1960s and '70s. He shows how working people had to compromise institutions of self-determination in pursuit of economic affluence. He illuminates the Japanese system with frequent references to other capitalist nations whose workplaces assumed very different shape, and looks to Japan's future, rebutting hasty predictions that Japanese industrial relations are about to be dramatically transformed in the American free-market image. Gordon argues that it is more likely that Japan will only modestly adjust the status quo that emerged through the turbulent postwar decades he chronicles here.

Rescue Robotics Satoshi Tadokoro,2009-04-15 Rescue Robotics presents the most significant findings of the DDT Project on robots and systems for urban search and rescue. This project was launched by the Japanese government in 2002 with the aim of applying a wide variety of robotics technologies to find a solution to the problem of disaster response, especially urban search and rescue in large-scale earthquakes. From 2002 to 2007 more than 100 researchers took part in the DDT Project, coming from a wide spectrum of research and development to make up four research groups: Aerial Robot Systems MU (Mission Unit), Information Infrastructure System MU, In-Rubble Robot System MU, and On-Rubble Robot System MU. This book discusses their development and testing of various robotic systems and technologies such as serpentine robots, traced vehicles, intelligent human interface and data processing, as well as analysing and verifying the results of these experiments. Rescue Robotics will be of interest to researchers and students, but will also prove useful for emergency response personnel. It offers an insight into the state of the art of rescue robotics and its readers will benefit from a knowledge of the advanced technologies involved in this field.

The B-29 Superfortress Robert A. Mann,2009-01-28 The B-29 Superfortress was for many years a cornerstone of American military aviation. Best known as a bomber, it also served in reconnaissance, as a tanker, and as a rescue plane. It was a crucial tool for American and Allied forces during World War II, Korea and beyond. This operational history of the B-29 gives in-depth information on the career of each plane. A list of the names and serial numbers of the planes, each plane's history from delivery date to removal from service, a description of the B-29's physical characteristics and performance parameters, and a description of the five B-29 variants are provided. Sections of the book give complete mission data for the B-29's World War II service in the China-Burma-India theater of operations, operations over Japan, aerial mining missions and test atomic bombing runs.

Challenging Gass 3 Freek Bos,Christian Louter,Fred Veer,Rob Nijse,2012 There are two things everybody knows about glass: it is transparent, and it breaks! These are also the properties that constitute the challenge of glass as an architectural and structural material. This book presents papers from the third Challenging Glass Conference (CGC3), held at the Technical University (TU) Delft, the Netherlands, in June 2012. The conference brings together glass engineering, research and design specialists. Papers are grouped under seven topic headings: project and case studies; joints, fixings and adhesives; strength, stability and safety (a category which includes a quarter of all the papers presented at the conference); laminates and composite design; curved and bended glass; architectural design and lighting and finally, glass in facades. Glass remains one of the most exciting materials available to designers and architects today. This book will be of interest to all those involved in working with glass in an architectural and structural context.

Hiroshige 53 Stations of the Tōkaidō Kyōka Cristina Berna,Eric Thomsen, The reader may already be acquainted with the Hoeidō series (1833-34) of The Fifty-Three Stations of the Tōkaidō, author's ISBN

978-1-956215-09-0. This was the most popular print series ever made in Japan. In this Kyōka series (a different publisher, 1838) we follow Hiroshige on the same journey from Edo, modern day Tokyo, to Kyoto, when he travelled the road to participate in an important procession in 1832. There were 53 post stations along this important road, apart from the start and terminus, in all 55 prints, which are all here in the order from Edo to Kyoto. The reader experiences the same journey with a completely different set of prints and can compare to the Hoeidō series. It is possible to travel the same road today and some villages are still looking quite like they did back then. The postal stations were constructed between 1601 and 1624.

Lloyd's Register OneOcean's Guide to Port Entry 1989-1990 Nations A-L Lloyd's Register Foundation, 1989-01-01 First published in 1971, these Guides provide invaluable information on thousands of commercial ports and terminals across the globe. Hiroshige 53 Stations of the Tokaido Aritaya Cristina Berna, Eric Thomsen, 2023-09-15 The Aritaya Fifty Three Stations of the Tokaido Road is one of the most beautiful of Hiroshiges huge production of landscape print series in spite of its small size. It is only abt 10 x 15 cm (with variations), Yotsugiri yokoban (quarter oban). It is also unusual in that it is a veritable full course and manual in landscape print design. It is a very rewarding study. All the way through Hiroshige follows certain design principles of proportion of elements, arranging elements and views by diagonals and parallels and balancing of color elements. Compared to most of his other Tokaido series Hiroshige in Aritaya focus on letting the landscape tell the story instead of letting people or legend do that, although this is not followed through completely.

We Are Not Garbage! Miki Hasegawa, 2012-12-06 This book offers a full history of a homeless movement in Tokyo that lasted nearly a decade. It shows how homeless people and their external supporters in the city combined their scarce resources to generate and sustain the movement. The study advocates a more nuanced analysis of movement gains to appreciate how poor people can benefit by acting collectively. It also draws attention to potential difficulties faced by lower-stratum movements aided by external allies. In particular, the study highlights how actions of the state can undermine the relations between aggrieved allies in such a way as to limit gains. The book is the first in English to detail homeless mobilization in Japan. It also addresses the origins of increased homelessness and development of homelessness policy in the country. Besides homelessness, it covers a number of current social issues, including economic globalization, social exclusion, and politics over space.
