Autonomous Mobile Robots and Multi-Robot Systems Eugene Kagan, Nir Shvalb, Irad Ben-Gal, 2019-12-16 Offers a theoretical and practical guide to the communication and navigation of autonomous mobile robots and multi-robot systems. This book covers the methods and algorithms for the navigation, motion planning, and control of mobile robots acting individually and in groups. It addresses methods of positioning in global and local coordinates systems, off-line and on-line path-planning, sensing and sensors fusion, algorithms of obstacle avoidance, swarming techniques and cooperative behavior. The book includes ready-to-use algorithms, numerical examples and simulations, which can be directly implemented in both simple and advanced mobile robots, and is accompanied by a website hosting codes, videos, and PowerPoint slides. Autonomous Mobile Robots and Multi-Robot Systems: Motion-Planning, Communication and Swarming consists of four main parts. The first looks at the models and algorithms of navigation and motion planning in global coordinates systems with complete information about the robot's location and velocity. The second part considers the motion of the robots in the potential field, which is defined by the environmental states of the robot's expectations and knowledge. The robot's motion in the unknown environments and the corresponding tasks of environment mapping using sensed information is covered in the third part. The fourth part deals with the multi-robot systems and swarm dynamics in two and three dimensions. Provides a self-contained, theoretical guide to understanding mobile robot control and navigation. Features implementable algorithms, numerical examples, and simulations. Includes coverage of models of motion in global and local coordinates systems with and without direct communication between the robots. Supplemented by a companion website offering codes, videos, and PowerPoint slides. Autonomous Mobile Robots and Multi-Robot Systems: Motion-Planning, Communication and

Swarming is an excellent tool for researchers, lecturers, senior undergraduate and graduate students, and engineers dealing with mobile robots and related issues.
