Developmental Dynamics and Transitions in High School Sofie Pedersen,2021-11-18 This book is about young people and their transitions throughout their first year of high school, deepening our understanding of how it is to be young and enter new institutional settings, and how to understand the developmental dynamics of youth life. It explores the everyday life of six young people as they enter high school and follows them closely as they encounter and try to make sense of the different standards, values, and demands that are built into the institutional setting of high school. The chapters explore the entanglements of personal motive orientation, interpersonal dynamics, institutional values and demands, as well as societal standards, and how subtle negotiations of who one is and ought to be are interwoven into the fabrics of everyday life. Hence the book explores variations on an institutional level – as different high school environments – along with variations on an interpersonal level, insisting on a person-environment reciprocity in the study of development. Using cultural-historical activity theory and ecological psychology derived from theorists including Bang, Barker & Wright, Gibson, Lewin, Hedegaard, Ilyenkov, Stetsenko, and Vygotsky, Sofie Pedersen argues that developmental dynamics among young people cannot be reduced to individual nor social processes alone but are connected to institutional conditions and to concrete places. By insisting on a wholeness approach to the understanding of youth development, Pedersen reveals the developmental dynamics that unfold in the everyday lives of young people, and sheds new light on youth life dynamics, including the challenges that young people face.

Humble Pi Matt Parker,2021-01-19 #1 INTERNATIONAL BESTSELLER AN ADAM SAVAGE BOOK CLUB PICK The book-length answer to anyone who

ever put their hand up in math class and asked, “When am I ever going to use this in the real world?” “Fun, informative, and relentlessly entertaining, Humble Pi is a charming and very readable guide to some of humanity's all-time greatest miscalculations—that also gives you permission to feel a little better about some of your own mistakes.” —Ryan North, author of *How to Invent Everything* Our whole world is built on math, from the code running a website to the equations enabling the design of skyscrapers and bridges. Most of the time this math works quietly behind the scenes . . . until it doesn't. All sorts of seemingly innocuous mathematical mistakes can have significant consequences. Math is easy to ignore until a misplaced decimal point upends the stock market, a unit conversion error causes a plane to crash, or someone divides by zero and stalls a battleship in the middle of the ocean. Exploring and explaining a litany of glitches, near misses, and mathematical mishaps involving the internet, big data, elections, street signs, lotteries, the Roman Empire, and an Olympic team, Matt Parker uncovers the bizarre ways math trips us up, and what this reveals about its essential place in our world. Getting it wrong has never been more fun.
