Organic Compounds in Soils, Sediments & Sludges T Roy Crompton,2012-11-29 The increasing awareness of the effects of pollutants in the eco-system and on the development of suitable methods of analysis has stimulated a lot of research recently. This volume comprehensively discusses the range of methods available for the analysis and determination of organic compounds in soils, river and marine sediments and industrial sludges. A review is provided of the instrumentation used in soil and sediment laboratories and an indication of the types of organics that can be determined by each technique. Subsequent chapters discuss the analysis of various types of organics in a logical and systematic manner. Guidance is provided on the applicability of techniques in certain environments, the advantages and disadvantages of using one method over another, likely interference, the sensitivity of particular techniques, and detection limits. The work will be of interest to agricultural chemists, agriculturists concerned with ways in which organic chemicals used in crop or soil treatment permeate the ecosystem and to biologists and scientists involved in fish, plant and insect life. Toxicologists, public health workers, oceanographers, and environmentalists will also find the book beneficial.

Meteorology J. Van Mieghem,2013-09-24 *Annals of the International Geophysical Year, Volume 32: Meteorology* covers the various aspects of the International Geophysical Year/International Geophysical Cooperation's meteorological program, focusing on radiation measurement. This book is divided into seven sections, and begins with an overview of the meteorological program of the IGY and some related activities. The subsequent chapter outlines the program of radiation measurement planned for the IGY and the data received at World Data Center C for the IGY/IGC period. These topics are followed by discussions on observations of solar radiation flux from aircraft flux of the Meteorological Research Flight during the period of February 1958-January 1960. Other chapters provide tabulations of meteorological data from ozone stations with IGY station numbers arranged according to latitude, north to south. The concluding chapter is devoted to the IGY-IGC effort in the field of nuclear radiation. This book will prove useful to geophysicists and researchers in the field.

Observations of the Night Airglow I. G. Yao,2013-10-22 *Annals of the International Geophysical Year, Volume 25: Observations of the Night Airglow* covers the results from systematic observations of the night airglow during the two and a half year period of the International Geophysical Year and International Geophysical Cooperation (July 1957 through December 1959). Airglow refers to light other than the polar aurora, emitted by the upper atmosphere. This volume is composed of eight chapters that contain a series of tables of hourly values of the absolute zenith intensity of the airglow, arranged according to station and wavelength. The numerical results from the several observers were put on punched cards to facilitate machine printing and statistical studies. The local times are given at the top of each page, and the universal times at the bottom. The year, month and day of the observations are shown in the first three columns. The convention was adopted of using the date corresponding to the evening, thus, the entire night of 1/2 July 1957 is entered as 1 July 1957 with the understanding that the date changed to 2 July at local midnight. The rest of the book considers the instruments, procedures, and statistic study of the night airglow. This book is of great value to geophysicists.
