**Sina Grace**

Ghosted in L.A. #7 Sina Grace,2020-01-29 The one condition of Daphne's residency at the Rycroft Manor—no one can find out about the ghosts. So far, Daphne is crushing it. Only, like, four people have found out. It's fine! Except, maybe not, because the most recent person to find out is her ultra-religious former roommate, who knows too much about exorcism for comfort.

**La-5/7 vs Fw 190** Dmitriy Khazanov,Aleksander Medved,2011-09-20 Soviet fighter aviation suffered terribly at the hands of the Jagdwaffe in the first year of the war in the east and, with the arrival of JG 51 and its Fw 190s on the Stalingrad Front in September 1942, things only got worse. However, help was on its way in the form of the La-5. Tougher, faster, and with a greater rate of climb than its predecessors, most were flown by a new generation of better-trained pilots led by combat veterans. These new fighters soon found themselves pitted into action on the Central Sector against the equally new Fw 190As of JG 51. From then on, these two fighters would battle it out in the skies over the Eastern Front. This book tells the complete story of the battles between these two important fighters.

*Water Quality Modelling for Rivers and Streams* Marcello Benedini,George Tsakiris,2013-02-11 The main objective of the Water Framework Directive in the European countries is to achieve a "good status" of all the water bodies, in the integrated management of river basins. In order to assess the impact of improvement measures, water quality models are necessary. During the previous decades the progress in computer technology and computational methods has supported the development of advanced mathematical models for pollutant transport in rivers and streams. This book is intended to provide the fundamental knowledge needed for a deeper understanding of these models and the development of new ones, which will fulfil future quality requirements in water resources management. This book focuses on the fundamentals of computational techniques required in water quality modelling. Advection, dispersion and concentrated sources or sinks of contaminants lead to the formulation of the fundamental differential equation of

pollutant transport. Its integration, according to appropriate initial and boundary conditions and with the knowledge of the velocity field, allows for pollutant behaviour to be assessed in the entire water body. An analytical integration is convenient only in one-dimensional approach with considerable simplification. Integration in the numerical field is useful for taking into account particular aspects of water body and pollutants. To ensure their reliability, the models require accurate calibration and validation, based on proper data, taken from direct measurements. In addition, sensitivity and uncertainty analysis are also of utmost importance. All the above items are discussed in detail in the 21 chapters of the book, which is written in a didactic form for professionals and students.
