Weapon Zeroing with Laser Marksmanship Training Systems (LMTR) Joseph D. Hagman, 1999 This research examined the Laser Marksmanship Training System's (LMTS's) capability to establish a valid weapon (i.e., M16A2 rifle) battlesight zero. A multi-phased approach was used to (a) examine the validity of an LMTS-established zero under live-fire conditions, (b) reexamine this validity using an alternative (presumably more accurate), manufacturer-recommended, LMTS zero calibration procedure, and (c) assess the degree of correspondence between LMTS point of aim and live bullet strike location under stabilized weapon conditions. Only 27% of LMTS-zeroed weapons were found to have confirmable live-fire zeroes, with no benefit resulting from use of the alternative zero calibration procedure. LMTS's aiming point also did not correspond to bullet strike location. Weapon quality was suggested to be a major factor contributing to this lack of correspondence. These findings indicate that an LMTS-established weapon zero may not always correspond to, and thus should not be substituted for, a live-fire-established weapon zero. Consequently, soldiers should not attempt record fire qualification with an LMTS-zeroed weapon without first confirming zero with live ammunition. Range time and ammunition savings resulting from the use of LMTS-zeroed weapons should be modest at best, given the relatively low percentage of LMTS-zeroed weapons found to have valid zeroes. Additional research is underway to examine the feasibility of using LMTS for marksmanship training and evaluation.--Stinet.

Laser Weapon Fouad Sabry, 2022-08-12 What Is Laser Weapon A directed-energy weapon that makes use of lasers is referred to as a laser weapon. After many decades of research and development, directed-energy weapons such as lasers are still in the experimental stage as of January 2020. It is unknown whether or not these weapons will ever be deployed as operational, high-performance military weapons, and if so, when this will occur. If there is fog, smoke, dust, precipitation, snow, smog, foam, or purposefully scattered obscurant compounds in the atmosphere, atmospheric thermal blooming will be much more severe than it already is. This issue is still mostly unresolved. A laser, at its core, is a light-emitting diode that, in order to function properly and avoid producing unwanted thermal blooming, must emit a beam of light into the atmosphere or into a vacuum. High Energy Laser (HeL) Bahman Zohuri, 2014-11-22 Directed Energy Weapons is nothing new to mankind, historically the origination of such weapons falls in centuries ago when first time the famous Greek mathematician, physicist, engineer, inventor, and astronomer Archimedes of Syracuse used different mirrors to collect sunbeams and focusing them on Romans fleet in order to destroy enemy ships with fire. This is known as the Archimedes Heat Ray. Archimedes may have used mirrors acting collectively as a parabolic reflector to burn ships attacking Syracuse. The device was used to focus sunlight onto approaching ships, causing them to catch fire. Of course the myth or reality of Archimedes Heat Ray still is a questionable story, but certain experiments with the help of a group of students from Massachusetts Institute of Technology was carried out with 127 one-foot (30 cm) square mirror tiles in October of 2005 that was focused on a mock-up wooden ship at a range of around 100 feet (30 m). The flames broke out on a patch of the ship, but only after the sky had been cloudless and the ship had remained stationary for around ten minutes. It was concluded the device was a feasible weapon under these conditions.

Soviet/Russian Laser Weapon Development: X-2 M & B-1 Kilo/A-60 Ladoga Alk/Peresvet Hugh Harkins, 2019-01-10 While there is a wealth of information available in regards to United States laser weapons program, including the application of such weapons in airborne laboratory testbeds, little is known about Soviet Union and later Russian Federation efforts to produce such weapons. This paper, which deals with the subject from a historical and scientific perspective, is intended to shed some light on the Soviet ground based KLO and A-60 Ladoga ALK laser weapon complex flying laboratory that first flew in the first half of the 1980's. The paper will also briefly detail Russian Federation continuation of A-60 ALK and KLO research work in the twenty first century, the former leading to the current generation Peresvet ground based combat laser complex unveiled in March 2018. All of the technical data and the majority of the graphic material has been furnished by official sources within the current Russian and past Soviet defence industry as well as the Ministry of Defence of the Russian Federation and United States intelligence agencies.

Basic Laser Weapon System Design Andrew Motes, 2015-03-02 This book describes the design process for laser weapons and shows how power and weight are related to laser efficiency and duty cycle. The author uses example requirements to step the reader through a basic design. It was written for engineers or physicists who have no experience in the field, or for engineering students who are interested in learning about laser weapons. Readers are expected to have an understanding of optics and laser physics. This book can also be used as a teaching tool for the engineering design process.

Lasers, Death Rays, and the Long, Strange Quest for the Ultimate Weapon Jeff Hecht, 2019 The whole story of laser weapons with a focus on its many interesting characters and sometimes bizarre schemes The laser--a milestone invention of the mid-twentieth century--quickly captured the imagination of the Pentagon as the key to

the ultimate weapon. Veteran science writer Jeff Hecht tells the inside story of the adventures and misadventures of scientists and military strategists as they exerted Herculean though often futile efforts to adapt the laser for military uses. From the 1950s' sci-fi vision of the death ray, through the Reagan administration's Star Wars missile defense system, to more promising developments today, Hecht provides an entertaining history. As the author illustrates, there has always been a great deal of enthusiasm and false starts surrounding lasers. He describes a giant laser that filled a Boeing 747, lasers powered like rocket engines, plans for an orbiting fleet of robotic laser battle stations to destroy nuclear missiles, claims that nuclear bombs could produce intense X-ray laser beams, and a scheme to bounce laser beams off giant orbiting relay mirrors. Those far-out ideas remain science fiction. Meanwhile, in civilian sectors, the laser is already being successfully used in fiber optic cables, scanners, medical devices, and industrial cutting tools. Now those laser cutting tools are leading to a new generation of laser weapons that just might stop insurgent rockets. Replete with interesting characters, bizarre schemes, and wonderful inventions, this is a well-told tale about the evolution of technology and the reaches of human ambition.

Predicting Rifle and Pistol Marksmanship Performance with Laser Marksmanship Training System Monte D. Smith,2000

Navy Lasers, Railgun, and Gun-Launched Guided Projectile Congressional Service,2018-07-18 The Navy is developing three new ship-based weapons that could improve the ability of Navy surface ships to defend themselves against missiles, unmanned aerial vehicles (UAVs), and surface craft: the Surface Navy Laser Weapon System (SNLWS), the electromagnetic railgun (EMRG), and the gun-launched guided projectile (GLGP), previously known as the hypervelocity projectile (HVP). The Navy refers to the initial (i.e., Increment 1) version of SNLWS as HELIOS, an acronym meaning high-energy laser with integrated optical dazzler and surveillance. EMRG could additionally provide the Navy with a new naval surface fire support (NSFS) weapon for attacking land targets in support of Marines or other friendly ground forces ashore. The Department of Defense is exploring the potential for using GLGP across multiple U.S. military services. Any one of these three new weapons, if successfully developed and deployed, might be regarded as a game changer for defending Navy surface ships against enemy missiles and UAVs. If two or three of them are successfully developed and deployed, the result might be considered not just a game changer, but a revolution. Rarely has the Navy had so many potential new types of surface-ship air-defense weapons simultaneously available for development and potential deployment. Although the Navy in recent years has made considerable progress in developing technologies for these new weapons, a number of significant development challenges remain. Overcoming these challenges will require additional development work, and ultimate success in overcoming them is not guaranteed. The issue for Congress is whether to approve, reject, or modify the Navy's funding requests and proposed acquisition strategies for these three potential new weapons. Potential oversight questions for Congress include the following: Using currently available air-defense weapons, how well could Navy surface ships defend themselves in a combat scenario against an adversary such as China that has or could have large numbers of missiles and UAVs? How would this situation change if Navy surface ships in coming years were equipped with SNLWS, EMRG, GLGP, or some combination of these systems? How significant are the remaining development challenges for SNLWS, EMRG, and GLGP? Are current schedules for developing SNLWS, EMRG, and GLGP appropriate in relation to remaining development challenges and projected improvements in enemy missiles and UAVs? When does the Navy anticipate issuing roadmaps detailing its plans for procuring and installing production versions of SNLWS, EMRG, and GLGP on specific Navy ships by specific dates? Will the kinds of surface ships that the Navy plans to procure in coming years have sufficient space, weight, electrical power, and cooling capability to take full advantage of SNLWS and EMRG? What changes, if any, would need to be made in Navy plans for procuring large surface combatants (i.e., destroyers and cruisers) or other Navy ships to take full advantage of SNLWS and EMRGs? Given the Navy's interest in HPV, how committed is the Navy to completing the development of EMRG and eventually deploying EMRGs on Navy ships? Are the funding line items for SNLWS, EMRG, and GLDP sufficiently visible for supporting congressional oversight?
