Flying Boats & Seaplanes Stéphane Nicolaou,1998 Beginning with races that were staged at elegant French resorts in the early part of the century, flying boats and seaplanes have played an integral part in aviation history. World War I spurred the development of these machines, and by the 1930s, flying boats and seaplanes had become pioneers in transcontinental flight. This photo-filled history recalls the role of flying boats and seaplanes in civil and military aviation history, and the enthusiasm of the engineers and pilots who are associated with their development. In addition to the golden years of hydraviation prior to World War II, author Nicolaou examines the decline of the seaplane, and its subsequent renaissance in nations that are today considered seaplane paradises. The saga is illustrated by more than 200 rare photographs uncovered in archives around the globe.

Torpedo Bombers, 1900-1950 Jean-Denis Lepage,2020-01-27 The torpedo-bomber was a very short-lived weapon system, operational for scarcely half a century from just prior WWI to the 1960s. Yet during its brief existence it transformed naval warfare, extending the ship-killing range of ships and coastal defences to hundreds of miles. The Royal Navy and Fleet Air Arm led the way, recording the first sinking of a ship by aerial torpedo in August 1915 but all major navies eagerly developed their own torpedo bomber forces. The torpedo-bomber reached its zenith in WWII, particularly from 1940-42, with notable successes at the Battle of Taranto, the sinking of the Bismarck and Pearl Harbor. It was the weapon of choice for both the US and Japanese in the big Pacific battles such as Midway. In the latter stages of the war, increasingly effective anti-aircraft fire and interceptor aircraft started to render it obsolete, a process completed post-war by long-range anti-ship missiles. Jean-Denis Lepage traces the development of torpedo bombers worldwide, describing their tactics, operational history and the aircraft themselves, including such well-loved types as the Swordfish, Beaufighter and Avenger. Over 300 aircraft are beautifully illustrated.

Saint-exupery Stacy Schiff,2011-07-27 From a master biographer, the life story of the daring French aviator who became one of the twentieth century's most beloved authors Antoine de Saint-Exupéry disappeared at age forty-four during a reconnaissance flight over southern France. At the time he was best known for a career of daring flights over the Sahara, the Pyrenees, and Patagonia and for his contributions to the science of aviation. But the solitary hours he spent above the earth in open cockpit airplanes gave birth to a more famous legacy, a series of enchanting, autobiographical novels and the classic story *The Little Prince*, still the most translated book in the French language. An impoverished aristocrat from one of France's oldest families, Saint-Exupéry moved at age twenty-seven to the western Sahara Desert, to live alone in a plank shack and manage the way station for the *Aéropostale*, the French mail service. His careers as a novelist and an aviator were born here, and his life once he returned to Europe was defined--with brilliant and catastrophic results--by the sense of isolated fascination and curiosity he developed in the desert. In this definitive biography, Pulitzer Prize winner Stacy Schiff reveals an intrepid and unconventional life that rivals the best adventure stories.

100 Years of Civil Aviation Ben Skipper,2023-11-15 An examination of civil aviation history from the end of World War I to the retiring of the Jumbo Jet. The book examines a century of civil aviation; in 1919 a fledgling industry was born out of civilianizing First World War bombers. The book covers the design and development of civil aircraft and all the personalities that shaped the industry; it features the hay-day of air travel before the advent of mass passenger transit, and the rise of smaller, austerity airlines. It covers the influence of military aircraft on civil planes, unpacks the laws that govern civil aviation and how they have changed over the past century. It chronicles air disasters, both mechanical and tyrannical, and for the first time, looks at the role of women in civil aviation. Playing its part in times of crisis, civil aviation has led rescue missions and covert operations; civilian

pilots were often used to test and transport new aircraft from their manufacturers to the frontline, often unarmed and unescorted. The book ends with the quiet retirement of an icon, amid a global pandemic and what lies in store for a greener flying future.

Wings Tom D Crouch,2004-11-09 The Invention of the Airplane ushered in the modern age. Tom D. Crouch chronicles how conquest of the skies shifted the way people travel, wage war, and perceive the promise of life. From balloons and kites to passenger jets, from stealth fighters to interplanetary rockets, Crouch tells how the enthusiasm of amateurs spawned an industry that now determines the rise and fall of nations. Achievements have been breathtaking, and yet this is not a tale of unalloyed progress. Blind alleys ended in debt and failure; bitter disappointment and stark terror exacted a price for technical progress. In the end, there is no more fascinating cast of characters than those who wrote history in the sky and, in living a dream, forever changed the world. Book jacket.

Adventurous Empires Phillip E. Sims,2013-01-19 This is a story from a bygone age recalling the most successful flying-boat airliner ever built. Designed to a specification for Imperial Airways, then Britains national airline, it carried passengers and, more importantly, mail throughout the British Empire. The airliner offered luxurious travel for the privileged few, every journey being an adventure shared by passengers and crew.Short Brothers built 42 Empires at their factory in Rochester during the late 1930s. Imperial Airways were expanding their network to the furthestmost outposts of the British Empire, whilst laying down the principles of scheduled airline operation.This is the tale of the realization of a dream and the efforts of those who made it possible. During World War II, the military Sunderland version became an icon.

Early French Aviation, 1905-1930 Graham M. Simons,2019-05-30 The author of Boeing 707 Group: A History delivers “a stunning study in early French aviation design with a plethora of aircraft” (IPMS/USA). France has been called the cradle of aviation by many—a fact that cannot be disputed, although some have tried. By the end of the 19th century, she led the world in lighter-than-air flight. Any concern about heavier-than-air flight was dismissed as inevitable, and France would achieve it in due course. France was also the first nation to stage air exhibitions. Unlike their counterparts in Britain, Germany and America, French designers were thoroughly entrepreneurial and tried a wide variety of adventurous styles from pusher to canard and monoplane to multiplane. In 1909 the first Air Show was held at the Grand Palais in what was to become an enduring tradition. Every year, the aircraft exhibitions were a massive success. It is not surprising that all this derring-do, all these technological achievements and all this innovation drew reporters and photographers like moths to a flame. The men, the machines, the places and the events all were recorded, reported, reproduced and

then were filed away. Hundreds of images appeared in print, but thousands were printed up only as contact prints from large-format glass negatives and then disappeared into albums to be forgotten about. In the mid-1990s the author came across one such treasure-trove; a number of dust-covered albums containing around five hundred images of aircraft, airships and expositions—it is doubtful if most have appeared in print before, so this will probably be the first time the events of these French pioneers have ever been showcased.

A Century of Triumph Christopher Chant, 2002 On December 17, 1903, on the windswept beaches of Kitty Hawk, North Carolina, Orville Wright piloted the world's first powered flight, in one of the most famous moments in history. Within a few short years, airplanes of various designs were lifting into the air over Europe and America. Soon, the entire world was caught up in the fevered advance of flight and airplanes, Zeppelins, autogyros and helicopters were making the world a much smaller place. To celebrate the first full century of powered flight premier aviation historian Christopher Chant and world-famous illustrator John Batchelor have joined forces to showcase an astonishing march of progress. From the early experiments of gliderman Otto Lilienthal to the moon walk of Neil Armstrong, it has indeed been *A Century of Triumph*. From the golden age of Zeppelins to the extreme design experiments of World War II to the fierce modernism of supersonic fighter jets, *A CENTURY OF TRIUMPH* demonstrates the full richness of mankind's flying craft. In addition to Batchelor's illustrations, the book features never-before-published vintage watercolour posters of pre-World War I aviation races and a treasure trove of photographs. Chant's text combines full histories of the planes themselves with biographical essays on some of the great figures of the twentieth century: the Barnstormers, Igor Sikorsky, Amelia Earhart, Chuck Yeager, and the Apollo XVII astronauts, among others. *A CENTURY OF TRUMPH* is a visual and factual feast for anyone who marvels at the majesty of flying.
