Fish and Fisheries at Higher Altitudes T. Petr,1999 The thirteen papers presented in this publication review fish stocks and fisheries of mountainous areas of Asia: Himalayas (Bhutan, Nepal, northern states of India within the Himalayas), Western Ghats (India), Karakoram-Hindu Kush (Pakistan, Afghanistan), Pamir (Tajikistan), Tien Shan (Kyrgyzstan, Kazakhstan), Altai (Kazakhstan, Mongolia, China), high altitude lakes of Mongolia and those of western China (provinces of Qinghai and Xinjiang [Uighur Autonomous Region] and Xizang [Tibet Autonomous Region]) and Caucasus (Armenia, Georgia, Azerbaijan). From south to north, fish fauna complexes change from Oriental to Palaearctic. Cool and coldwater streams and rivers support subsistence and/or recreational/sport fisheries, with commercial fisheries practised only in some lakes and reservoirs. While fishing of streams and rivers is largely unmanaged, considerable management effort has gone into some lakes and reservoirs, especially in Kazakhstan, Kyrgyzstan and India in order to maintain reasonably high fish catches. The management measures have included translocation and stocking of exotic fish species and regulation of fisheries. For recreational fishery, brown trout has been stocked in rivers and streams of the southern slopes of Himalayas, rainbow trout in some streams of Western Ghats ... etc.

Molecular Systematics of Fishes Thomas D. Kocher,Carol A. Stepien,1997-07-10 Sequenced biological macromolecules have revitalized systematic studies of evolutionary history. *Molecular Systematics of Fishes* is the first authoritative overview of the theory and application of these sequencing data to fishes. This volume explores the phylogeny of fishes at multiple taxonomic levels, uses methods of analysis of molecular data that apply both within and between fish populations, and employs molecule-based phylogenies to address broader questions of evolution. Targeted readers include ichthyologists, marine scientists, and all students, faculty, and researchers interested in fish evolution and ecology and vertebrate systematics. Focuses on the phylogeny and evolutionary biology of fishes Contains phylogenies of fishes at multiple taxonomic levels Applies molecule-based phylogenies to broader questions of evolution Includes methods for critique of analysis of molecular data

Fishing the World Steen Ulnits,2011-09-27 Since first visiting Greenland in 1974 Steen Ulnits has actively sought and added to his list a large number of great game fishes. In his book *Fishing the World* - catching them all he presents a number of fish species that made a lasting impression on him - as a fisheries biologist as well as an eager angler. Read about some of the most sought after game fish species living in exotic surroundings and learn what gave them their current fame. Read about a larger number of lesser known species that also made the Top 50 list of fish worth travelling across the globe to meet and catch in their natural environment. Some of these species have been hard to catch or hard to reach. But they have all been interesting and well worth the effort. Still Steen Ulnits has a number of species on his list that need to meet his flies and lures and have their picture taken! Join Steen Ulnits on an exciting and inspiring trip around the world, fishing rod in hand!

Language Contact in Siberia Bayarma Khabtagaeva, 2019-04-09 This monograph discusses phonetic, morphological and semantic features of Altaic elements in Yeniseian, a rather heterogeneous language family traditionally classified as one of the 'Paleo-Siberian' language groups, that are not related to each other.

The Last Wild Trout Greg French, 2016-08-01 Trout are found in some of the most wild, romantic and scenically diverse habitats on Earth, and fly fishers the world over share a unique camaraderie, something universally profound and sincere. In *The Last Wild Trout*, Greg French explores the last truly great and most coveted trout fisheries left on the planet. Roaming the final frontiers of trout fishing, Greg visits twenty locations including Tasmania, New Zealand, Iceland, the British Isles, Mongolia, Slovenia, British Columbia, Wyoming, California, Nevada and Hokkaido. Each chapter deals with a unique species or subspecies of wild trout, and tells a compelling human narrative set against a backdrop of conservation. Photo sections and taxonomy notes complete the picture in this fascinating book. Reflecting on the complexity of humanity's interactions with pristine natural environments and threatened fisheries, *The Last Wild Trout* is a reminder from one of the world's best fishing writers of the beauty and importance of nature in all of our lives.

Across the Ussuri Kray Vladimir K. Arsenyev, 2016-09-19 In Russia's Far East sits the wild Ussuri Kray, a region known for its remote highlands and rugged mountain passes where tigers and bears roam the cliffs, and salmon and lenok navigate the rivers. In this collection of travel writing by famed Russian explorer and naturalist Vladimir K. Arsenyev (1872-1930), readers are shuttled back to the turn of the 20th century when the Russian Empire was reeling from its defeat in the Russo-Japanese War (1904-1905) and vulnerable to its Far Eastern neighbors. What began as an expedition to survey the region's infrastructure for the Russian military turned into an adventure through a territory rich in ethnic and ecological diversity. Encountering the disappearing indigenous cultures of the Nanai and Udege, engaging the help of Korean farmers and Chinese hunters, and witnessing the beginning of indomitable Russian settlement, Arsenyev documents the lives and customs of the region's inhabitants and their surroundings. Originally written as a popular scientific description of the Kray, this unabridged edition includes photographs largely unseen for nearly a century and is annotated by Jonathan C. Slaght, a biologist working in the same forests Arsenyev explored. *Across the Ussuri Kray* is a classic of northeast Asian cultural and natural history.

Mongolia Jane Blunden, 2014-10-01 Open to the Western world since 1990, the 'Land of Blue Sky' is one of the few places on earth where travellers can tread on undiscovered ground and explore with a true sense of adventure. Homeland of the greatest conqueror of all time, Genghis

Khan, vast tracts can be discovered on horse or camel, or in the comfort of a four-wheel drive. Written by Mongolian expert, Jane Blunden, this updated guide highlights its culture and customs, including the deel, the colourful national dress, herding rules and customs, Mongolian throat singing and Naadam, the annual celebration of wrestling, archery and horse-riding. For visitors keen to sample the unique pleasures of staying with nomads, she also explains how and where to experience the traditional lifestyle of a Mongolian ger. The guide offers tips on riding and biking tours, winter dog sledding and summer yoga camps and provides in-depth information on national parks and conservation. Wildlife tours and visits based around Buddhist temples are still Mongolia's strengths, along with the age old traditional herding culture and Nomadic lifestyle, to be seen throughout this vast country. This amazing lifestyle of nomads with their flocks of camels, sheep and cashmere goats herded on horseback, from the times of Genghis Khan, is disappearing fast as families become more settled. The capital Ulaanbaatar is undergoing major changes and offers visitors a taste of city life in contrast to the wide open spaces. The guide reviews new hotels and restaurants which are popping up as business is booming. Mongolia provides all the information you'll need to arrange an unforgettable stay with Mongolian nomads, enjoying the centuries-old lifestyle of a traditional ger.

Chinese Fishes David L.G. Noakes, Aldemaro Romero, Yahui Zhao, Yingqi Zhou, 2009-11-18 This book documents the current state of research by Chinese scientists on fish biology and fisheries and brings together manuscripts by authors from research institutions, universities and government agencies. There are papers on aquaculture, life history, genetics, marine and freshwater biology, conservation, physiology, new species descriptions, and truly amazing hypogean fishes. The information on these remarkable cave species shows how much we have yet to learn from that incredible fauna. There are papers dealing with some of the largest fishes and some of the smallest cave species. There are papers dealing with some of the most traditional forms of aquaculture and others with the most modern molecular techniques. The volume includes papers on critically threatened native fishes as well as the most common food species, such as grass carp (*Ctenopharyngodon idella*). The information on rare and threatened species shows how China is dealing with their endangered fishes. The information on their carp species will be invaluable to those in other countries who will either take advantage of the productive carp species in aquaculture or try to manage them as invasive species outside China. For the first time we bring together a complete overview of the state of fisheries research in China.

Genetics of Subpolar Fish and Invertebrates Anthony J. Gharrett, Richard G. Gustafson, Jennifer L. Nielsen, James E. Seeb, Lisa W. Seeb, William W. Smoker, Gary H. Thorgaard, Richard L. Wilmot, 2012-12-06 Fisheries genetics researchers will find invaluable the thirty-eight peer-reviewed contributions in this book, presented at the 20th Lowell Wakefield Fisheries Symposium Genetics of Subpolar Fish and Invertebrates, held in May 2002 in Juneau, Alaska. Looming over concerns of lost fisheries stocks and persistent erosion of genetic variability are predictions of global warming,

which may further tax genetic resources. One consequence is an increased reliance on genetic applications to many aspects of fisheries management, aquaculture, and conservation. The contributions in this book are important to modern fisheries science and genetics, and illustrate the evolution of the field over the past decade. The improved technology provides tools to address increasingly complicated problems in traditional applications and ecological and behavioral studies. The union between molecular and quantitative genetics, where many of the major questions about population structure and evolution remain unanswered, will also benefit from the new technologies.
