*The Future of the U.S. Intercontinental Ballistic Missile Force* Lauren Caston,Robert S. Leonard,Christopher A. Mouton,Chad J. R. Ohlandt,S. Craig Moore,Raymond E. Conley,Glenn Buchan,2014-02-04 The authors assess alternatives for a next-generation intercontinental ballistic missile (ICBM) across a broad set of potential characteristics and situations. They use the current Minuteman III as a baseline to develop a framework to characterize alternative classes of ICBMs, assess the survivability and effectiveness of possible alternatives, and weigh those alternatives against their cost.

**Atomic Audit** Stephen I. Schwartz,2011-12-01 Since 1945, the United States has manufactured and deployed more than 70,000 nuclear weapons to deter and if necessary fight a nuclear war. Some observers believe the absence of a third world war confirms that these weapons were a prudent and cost-effective response to the uncertainty and fear surrounding the Soviet Union's military and political ambitions during the cold war. As early as 1950, nuclear weapons were considered relatively inexpensive— providing a bigger bang for a buck—and were thoroughly integrated into U.S. forces on that basis. Yet this assumption was never validated. Indeed, for more than fifty years scant attention has been paid to the enormous costs of this effort—more than \$5 trillion thus far—and its short and long-term consequences for the nation. Based on four years of extensive research, Atomic Audit is the first book to document the comprehensive costs of U.S. nuclear weapons, assembling for the first time anywhere the actual and estimated expenditures for the program since its creation in 1940. The authors provide a unique perspective on U.S. nuclear policy and nuclear weapons, tracking their development from the Manhattan Project of World War II to the present day and assessing each aspect of the program, including research, development, testing, and production; deployment; command, control, communications, and intelligence; and defensive measures. They also examine the costs of dismantling nuclear weapons, the management and disposal of large quantities of toxic and radioactive wastes left over from their production, compensation for persons harmed by nuclear weapons activities, nuclear secrecy, and the economic implications of nuclear deterrence. Utilizing archival and newly declassified government documents and data, this richly documented book demonstrates how a variety of factors—the open-ended nature of nuclear deterrence, faulty assumptions about the cost-effectiveness of nuclear weapons, regular misrepresentation of and overreaction to the Soviet threat, the desire to maintain nuclear superiority, bureaucratic and often arbitrary decisions, pork barrel politics, and excessive secrecy—all drove the acquisition of an arsenal far larger than what many contemporary civilian and military leaders deemed necessary. Atomic Audit concludes with recommendations for strengthening atomic accountability and fostering greater public understanding of nuclear weapons programs and policies.

**Onizuka Air Force Base** Joseph T. Page II,2019 For nearly five decades, some of the United States military's most secretive operations were conducted out of a collection of nondescript buildings at the intersection of State Route 237 and Mathilda Avenue in Sunnyvale, California. The installation was known by a variety of names in its early years: Satellite Test Center, Air Force Satellite Control Facility, the Blue Cube, and Sunnyvale Air Force Station. In July 1986, the facility was renamed Onizuka Air Force Base after Col. Ellison S. Onizuka, the first Asian American astronaut, who was killed during the space shuttle Challenger accident. The location was selected due to its proximity to Lockheed Missiles and Space Company's Sunnyvale facilities and supported early satellite reconnaissance programs such as Corona, Gambit, and Hexagon. As the nation's nucleus for satellite command and control, workers at Onizuka Air Force Base directed efforts for the National Reconnaissance Office (NRO), US military, and NASA's space shuttle program until the closure of the base in 2010.

Does the United States Need Space-Based Weapons?. William L. Spacy II,2022

*Space Launch Complex 10: Vandenberg's Cold War National Landmark* Joseph T. Page II,2016 Situated in the sand dunes of California's Central Coast, Space Launch Complex Ten, often called SLC-10 or Slick Ten, is a National Historic Landmark that commemorates a powerful Cold War legacy. Home to Vandenberg's Space and Missile Technology Center, or SAMTEC, the facility contains the rich technological heritage of the U.S. Air Force's space and missile launch systems. As the only remaining Thor intermediate-range ballistic missile launch site in the world, SLC-10's noteworthy achievements span the globe. The complex trained British Royal Air Force missileers for Project EMILY, assisted during nuclear atmospheric tests in the Pacific and launched military weather satellites in support of the covert National Reconnaissance Program. Former air force space and missile officer Joseph T. Page II introduces these amazing stories of dedicated men and women who led the American military effort to explore space.

**Kirtland Air Force Base** Joseph T. Page II,2018 In late 1939, the US Army leased from the City of Albuquerque 2,000 acres adjacent to the municipal airport to house a small Air Corps detachment servicing transient Army and Navy aircraft. From these humble beginnings, construction began on Albuquerque Army Air Base on January 7, 1941. Starting as a B-17 training base in the months prior to World War II, the airfield would contain a bombardier school, glider replacement center, and four-engine transition school. On February 25, 1942, at the special request of Gen. Henry Hap Arnold, Albuquerque Army Air Base was renamed after Col. Roy C. Kirtland, one of the early Army aviation pioneers. Today, Kirtland Air Force Base has evolved into a military base different in many respects from its predecessor installations--Oxnard Field, Sandia Base, and Manzano Base. The base's presence is significant to Albuquerque's economic and social life, as well as housing several of the nation's most important defense research and development organizations.

Rockets and Missiles of Vandenberg AFB Joseph T. Page II,2019-04-28 On December 16, 1958, a Thor intermediate-range ballistic missile became the first rocket launch from Vandenberg AFB, California. Established from the remnants of a WWII and Korean War training base named Camp Cooke, the USAF selected the location to operationally test intercontinental-range ballistic missiles over the Pacific Ocean. Over the decades, Vandenberg has seen over 1,900 launches of more than 70 varieties of rockets and missiles. This book chronicles the launches by rocket/missile, launchpad location, and payload. Many never-before-seen photographs illustrate the variety of space launch vehicles used to lift national-security satellites into orbit, as well as the operational testing of the missiles used by United States nuclear-alert forces. The launches at Vandenberg helped drive the technological innovation and deterrence that helped the US win the Cold War.
