Lisunov Li-2 Yefim Gordon,Dmitriy Komissarov,Sergey Komissarov,2006-03-30 When they bought a manufacturing license for the DC-3 in 1935, the Soviet aircraft industry's decision makers had no way of knowing the place the Douglas airliner would come to occupy in aviation's hall of fame. Yet, even less did they know of the part the Soviet spin-off would play in the nation's aviation history. Suitably adapted to make use of Russian engines and structural materials, the DC-3 entered production as the PS-84; and gradually the design drifted further apart from the US original. In 1941 production was moved from Moscow to Tashkent to escape the advancing German troops and the aircraft was redesignated Li2. The Li-2 served an innumerable multitude of tasks, including the night bomber role during the war and flights in support of Soviet polar research in the post-war years. This addition to the ever-popular Red Star series describes all known versions of the PS-84/Li-2 and gives operational details as it explored what is probably the least-known aspect of the history of one of the world's best-known airliners. Four pages of line drawings are included.

Tablets from the Iri-saġrig Archive Marcel Sigrist,Tohru Ozaki,2021-06-21 While each of the previously known archives from the Third Dynasty of Ur has provided distinct views of Sumerian society, those from Iri-Saġrig present an extraordinary range of new sources, depicting a cosmopolitan Sumerian/Akkadian city unlike any other from this period. In this publication, Marcel Sigrist and Tohru Ozaki present more than two thousand newly identified tablets, mostly from Iri-Saġrig. This unique and extensive corpus elucidates the importance that Iri-Saġrig represented politically, militarily, and culturally in Sumer. Although these tablets were not able to be cleaned, baked, or photographed, the authors' transliterations are based on the original tablets, often after repeated collations. Moreover, access to so many well-preserved tablets made it possible to improve upon the readings and interpretations offered in previous publications. Volume 1 contains a catalog and classification of the texts by provenance, a list of month names and year formulas, another of inscriptions, a chronological listing of the texts, and extensive indexes of personal names, deities, toponyms, and selected words and phrases. Volume 2 presents the texts in transliteration with substantial commentary. This two-volume publication preserves and makes available to the scholarly community a significant segment of Iraq's cultural legacy that otherwise might have been ignored or even lost. It will augment and enhance our understanding of the unique civilization of Mesopotamia in the late third millennium BCE.

Frontiers in Number Theory, Physics, and Geometry II Pierre E. Cartier,Bernard Julia,Pierre Moussa,Pierre Vanhove,2007-07-18 Ten years after a 1989 meeting of number theorists and physicists at the Centre de Physique des Houches, a second event focused on the broader interface of number theory, geometry, and physics. This book is the first of two volumes resulting from that meeting. Broken into three parts, it covers Conformal Field Theories, Discrete Groups, and Renormalization, offering extended versions of the lecture courses and shorter texts on special topics.

Li-s Batteries: The Challenges, Chemistry, Materials, And Future Perspectives Demir-cakan Rezan,2017-06-09 Lithium-sulfur (Li-S) batteries give us an alternative to the more prevalent lithium-ion (Li-ion) versions, and are known for their observed high energy densities. Systems using Li-S batteries are in early stages of development and commercialization however could potentially provide higher, safer levels of energy at significantly lower cost. In this book the history, scientific background, challenges and future perspectives of the lithium-sulfur system are presented by experts in the field. Focus is on past and recent advances of each cell compartment responsible for the performance of the Li-S battery, and includes analysis of characterization tools, new designs and computational modeling. As a comprehensive review of current state-of-play, it is ideal for undergraduates, graduate students, researchers, physicists, chemists and materials scientists interested in energy storage, material science and electrochemistry.

Spinor Genera in Characteristic 2 Yuanhua Wang,Fei Xu,2008 The purpose of this paper is to

establish the spinor genus theory of quadratic forms over global function fields in characteristic 2. The first part of the paper computes the integral spinor norms and relative spinor norms. The second part of the paper gives a complete answer to the integral representations of one quadratic form by another with more than four variables over a global function field in characteristic 2.

Structural Properties of Polylogarithms Leonard Lewin,1991 Years ago, the handful of peculiar numerical dilogarithmic identities, known since the time of Euler and Landen, gave rise to new discoveries concerning cyclotomic equations and related polylogarithmic ladders. These discoveries were made mostly by the methods of classical analysis, with help from machine computation. About the same time, starting with Bloch's studies on the application of the dilogarithm in algebraic K -theory and algebraic geometry, many important discoveries were made in diverse areas. This book seeks to provide a synthesis of these two streams of thought. In addition to an account of ladders and their association with functional equations, the chapters include applications to volume calculations in Lobachevsky geometry, relations to partition theory, connections with Clausen's function, new functional equations, and applications to K -theory and other branches of abstract algebra. This rapidly-expanding field is brought up to date with two appendices, and the book concludes with an extensive bibliography of recent publications. About two-thirds of the material is accessible to mathematicians and scientists in many areas, while the remainder requires more specialized background in abstract algebra.

Progress in Inorganic Chemistry Stephen J. Lippard,2009-09-17 The series Progress in Inorganic Chemistry provides a forum for critical, authoritative evaluations of advances in every area of the discipline. Each volume reports recent progress with a significant, up-to-date selection of papers by internationally recognized researchers, complemented by detailed discussions and complete documentation. All volumes feature a complete subject index, and the series includes a cumulative index.

Microwave Materials and Applications, 2 Volume Set Mailadil T. Sebastian,Rick Uvic,Heli Jantunen,2017-05-08 The recent rapid progress in wireless telecommunication, including the Internet of Things, 5th generation wireless systems, satellite broadcasting, and intelligent transport systems has increased the need for low-loss dielectric materials and modern fabrication techniques. These materials have excellent electrical, dielectric, and thermal properties and have enormous potential, especially in wireless communication, flexible electronics, and printed electronics. Microwave Materials and Applications discusses the methods commonly employed for measuring microwave dielectric properties, the various attempts reported to solve problems of materials chemistry and crystal structure, doping, substitution, and composite formation, highlighting the processing techniques, morphology influences, and applications of microwave materials whilst summarizing many of the recent technical research accomplishments in the area of microwave dielectrics and applications Chapters examine: Oxide ceramics for dielectric resonators and substrates HTCC, LTCC and ULTCC tapes for substrates Polymer ceramic composites for printed circuit boards Elastomer-ceramic composites for flexible electronics Dielectric inks EMI shielding materials Microwave ferrites A comprehensive Appendix presents the fundamental properties for more than 4000 low-loss dielectric ceramics, their composition, crystal structure, and their microwave dielectric properties. Microwave Materials and Applications presents a comprehensive view of all aspects of microwave materials and applications, making it useful for scientists, industrialists, engineers, and students working on current and emerging applications of wireless communications and consumer electronics.

Organometallic Chemistry E W Abel,F G A Stone,2007-10-31 Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace. Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials. This Specialist Periodical Report aims to

reflect these current interests reviewing progress in theoretical organometallic chemistry, main group chemistry, the lanthanides and all aspects of transition metal chemistry. Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

NMR and MRI of Electrochemical Energy Storage Materials and Devices Yong Yang, Riqiang Fu, Hua Huo, 2021-06-17 Energy storage material is a hot topic in material science and chemistry. During the past decade, nuclear magnetic resonance (NMR) has emerged as a powerful tool to aid understanding of the working and failing mechanisms of energy storage materials and devices. The aim of this book is to introduce the use of NMR methods for investigating electrochemical storage materials and devices. Presenting a comprehensive overview of NMR spectroscopy and magnetic resonance imaging (MRI) on energy storage materials, the book will include the theory of paramagnetic interactions and relevant calculation methods, a number of specific NMR approaches developed in the past decade for battery materials (e.g. in situ, ex situ NMR, MRI, DNP, 2D NMR, NMR dynamics) and case studies on a variety of related materials. Helping both NMR spectroscopists entering the field of batteries and battery specialists seeking diagnostic methods for material and device degradation, it is written by leading authorities from international research groups in this field.

More (Almost) Impossible Integrals, Sums, and Series Cornel Ioan Vălean, 2023-05-24 This book, the much-anticipated sequel to (Almost) Impossible, Integrals, Sums, and Series, presents a whole new collection of challenging problems and solutions that are not commonly found in classical textbooks. As in the author's previous book, these fascinating mathematical problems are shown in new and engaging ways, and illustrate the connections between integrals, sums, and series, many of which involve zeta functions, harmonic series, polylogarithms, and various other special functions and constants. Throughout the book, the reader will find both classical and new problems, with numerous original problems and solutions coming from the personal research of the author. Classical problems are shown in a fresh light, with new, surprising or unconventional ways of obtaining the desired results devised by the author. This book is accessible to readers with a good knowledge of calculus, from undergraduate students to researchers. It will appeal to all mathematical puzzlers who love a good integral or series and aren't afraid of a challenge.

Membrane Computing Hendrik Jan Hoogeboom, Gheorghe Paun, Grzegorz Rozenberg, Arto Salomaa, 2006-12-21 This book constitutes the thoroughly refereed extended post-proceedings of the 7th International Workshop on Membrane Computing, WMC 2006, held in Leiden, Netherlands in July 2006. The papers in this volume cover all the main directions of research in membrane computing, ranging from theoretical topics in mathematics and computer science, to application issues. Special attention was paid to the interaction of membrane computing with biology.

Structural-Chemical Systematics of Minerals Alexander A. Godovikov, Svetlana N. Nenasheva, 2019-08-22 This book represents new structural-chemical minerals of A.A. Godovikov which reflects the latest data on communication of the chemical composition with structure and properties of minerals, conditions of their formation, their paragenesis. The following features lay its

basis: a) the numerous, often not considered earlier chemical signs on which chemical properties of minerals, conditions of their formation or paragenesis may depend; b) the determined consistent patterns of communication between chemical compounds structure and fundamental properties of the elements forming them; c) regularities of structure change and properties of minerals depending on physical and chemical parameters of formation or environment systems. This systematic considers real associations, differences in physical and chemical parameters at which minerals are forming and existing. In this systematic sometimes the preference is given to the last signs because all natural associations aren't casual in an arrangement of minerals, so they formed as a result of difficult and longtime selection. The properties of minerals are coordinated with their structure, formation conditions. The transition conditions from one taxon to another both at one level and at its deepening are accurately formulated. The primary type of a chemical bond was accepted as leading sign of five highest taxons. The lowest taxons were allocated on: a) the mineral belongings to izodesmichesky or anizodesmichesky connections; b) the type of anion, cation; c) the coordination number of an anionoobrazovatel; d) the size of CX; e) the type of the structure. The signs which are in the basis for systematization give the chance to find the place for new mineral types in the tables, to change the place of mineral in connection with specification of its formula or structure. They also allow to distinguish new taxons for the new mineral types representing chemical compounds, earlier not known in nature. Thus this systematic is not a stiffened representation but the developing system.
