The Lady Liger K. M. Jones,2015-04-22 This story is about a young woman who was discovered in the woods after becoming an orphan at the tender age of 5. To the world, or even the city of Safari City, no one knew of her existence and she lived with two animals that she considered as her new parents. The parents were animals from the wild, her mother was a tiger and her father was a lion. ZaNoah lived in an abusive home with an abrasive father and a weak mother who endured his abusive ways until death. Little did her natural father know that ZaNoah's mouth was more powerful than he could ever imagine. The community of Safari City did not know that she became an orphan

at the age of 5, but she learned how to survive at a very young age. After she was arrested by the police, they later learned that there were a few individuals that knew of existence, but did not report this child to the authorities. A large bounty hung over her head, because of the power of her roar. Lisa Cox, an officer of the Safari City Police took her under her wing and despite everything; she risk her life to save ZaNoah.

Uncorked Gérard Liger-Belair, 2013-06-02 Uncorked quenches our curiosity about the inner workings of one of the world's most prized beverages. Esteemed for its freshness, vitality, and sensuality, champagne is a wine of great complexity. Mysteries aplenty gush forth with the popping of that cork. Just what is that fizz? Can you judge champagne quality by how big the bubbles are, how long they last, or how they behave before they fade? And why does serving champagne in a long-stemmed flute prolong its chill and effervescence? Through lively prose and a wealth of state-of-the-art photos, this revised edition of Uncorked unlocks the door to what champagne is all about. Providing an unprecedented close-up view of the beauty in the bubbles, Gérard Liger-Belair presents images that look surprisingly like lovely flowers, geometric patterns, even galaxies as the bubbles rise through the glass and burst forth on the surface. He illustrates how bubbles form not on the glass itself but are born out of debris stuck on the glass wall, how they rise, and how they pop. Offering a colorful history of champagne, Liger-Belair tells us how it is made and he asks if global warming could spell champagne's demise. In a brand-new afterword, he updates the reader on new developments in the world of bubble science and delves even more deeply into the processes that give champagne its unique and beautiful character. Bubbly may tickle the nose, but Uncorked tackles what the nose and the naked eye cannot--the spectacular science that gives champagne its charm and champagne drinkers immeasurable pleasure.

Chimeras, Hybrids, and Interspecies Research Andrea L. Bonnicksen, 2009-09-21 In his 2006 State of the Union speech, President George W. Bush asked the U.S. Congress to prohibit the most egregious abuses of medical

research, such as the creation of animal–human hybrids. The president's message echoed that of a 2004 report by the President's Council on Bioethics, which recommended that hybrid human–animal embryos be banned by Congress. Discussions of early interspecies research, in which cells or DNA are interchanged between humans and nonhumans at early stages of development, can often devolve into sweeping statements, colorful imagery, and confusing policy. Although today's policy advisory groups are becoming more informed, debate is still limited by the interchangeable use of terms such as chimeras and hybrids, a tendency to treat all forms of interspecies alike, the failure to distinguish between laboratory research and procreation, and not enough serious policy justification. Andrea Bonnicksen seeks to understand reasons behind support of and disdain for interspecies research in such areas as chimerism, hybridization, interspecies nuclear transfer, cross-species embryo transfer, and transgenics. She highlights two claims critics make against early interspecies studies: that the research will violate human dignity and that it can lead to procreation. Are these claims sufficient to justify restrictive policy? Bonnicksen carefully illustrates the challenges of making policy for sensitive and often sensationalized research—research that touches deep-seated values and that probes the boundary between human and nonhuman animals.
