*Separations - Necessary Evils?* Liso Makarius Starrett, D. Min., BCC, 2014-11-13 The book describes examples of separations as an opportunity for transformation and healing. These include early experiences from the author's personal life, such as missing her absent father as a four year old, and how she found a way to cope; once she moved to the United States she pursued a personal search for meaning, mostly spiritual, in unexpected places: during a vision quest, the World Trade Center after September 11, a bungee jump in New Zealand, learning & teaching how to walk a Labyrinth, becoming a Spiritual Director, Skydiving, serving as an auxiliary mounted police officer in New York's Central Park, becoming a pilot. Later, her personal experiences and training helped her understand and connect with patients, who shared their lives during visits. As a chaplain, the author learned quickly that one cannot easily fix other peoples' problems but can walk alongside them in their longing to heal and perhaps even

discover their own spiritual potential. From these experiences, the readers learn that there are surprising benefits to facing physical, mental, emotional or spiritual distress in life. They may also discover the possibility to heal and even to reach a higher spiritual level when they understand, they are not alone.

The book begins with a series of in-depth discussions of the economic analysis of technological change. The second section contains a discussion of theoretical models of technological change, focusing on issues such as time and innovation. The third section brings together a number of applied analyses of technological change and examines the effect of factors such as human resource constraints, patenting and science and technology indicators.

**Internationalization, Technological Change and the Theory of the Firm** Nicola De Liso,Riccardo Leoncini,2010-09-13 This book focuses on three main areas, each of which is central to economic theorising: firms' organisation and behaviour, technological change and the process of globalisation. Each subject can be analysed by using different methods, which range from purely theoretical abstractions to case studies and from econometrics to simulations. What this collection provides is a broad view of the three topics by concentrating on different aspects of each of them, and utilising different methods of investigation. *Internationalization, Technological Change and the Theory of the Firm* looks in detail at various questions surrounding firms' organisation, including why we can observe ordered paths of production, whether proximity

between firms matters, and whether patenting is always worthwhile. In addition, several essays explore technology and innovation, including the persistence-cum-development of old technologies. Furthermore, this book focuses on those processes which concern small- and medium-sized firms, considering the usefulness of stage theory, the possibilities of production off-shoring and the skill composition of manufacturing firms. Overall, the book is characterised by original ideas, renewed applications of mathematical and statistical methods and the use of new databases. This valuable collection will be of interest to postgraduates and researchers focusing on innovation, theories of the firm and globalisation; and should also be useful to a professional readership as it presents up-to-date research with the aim of improving our understanding of the phenomena of technological change, firms' strategies, and globalisation.
