Nanotechnology in Advanced Electrochemical Power Sources S. R. S. Prabakaran,M. Siluvai Michael,2014-10-24 The challenge of providing adequate power on an indefinite basis without causing long-term damage to the environment requires a versatile means of energy conversion and storage. As such, electrical energy storage is becoming more vital today than at any time in human history. Electrochemical systems, such as batteries, supercapacitors, fuel cells, and photoelectrochemical cells, can help meet this objective. Future generations of rechargeable lithium batteries will be required to power portable electronic devices, store electricity from renewable sources, and serve as a vital component to pursuing electric mobility in the future to reduce fossil fuel demand and mitigate environmental issues. In this context, engineering of new materials, especially at the nanoscale, has become imperative to achieve enhanced energy and power density to meet the future challenges of energy storage. This book outlines the state of the art of nanoscale aspects of advanced energy storage devices, such as lithium-ion batteries, including microbatteries and electrochemical supercapacitors. It focuses on various fundamental issues related to device performance of various positive and negative electrode materials, with special reference to their nanoscale advantages. It also includes fundamentals and processing techniques with regard to synthesis, characterization, physical, and electrochemical properties, and applications of nanoscale materials pertaining to advanced electrochemical power sources. A variety of advanced nanomaterials, such as transition metal oxides, phosphates, silicates, and conversion electrodes, together with some special nanomaterials such as carbon nanotubes, nanorods, and mesoporous carbons are discussed by many notable authorities in the field.

Current Technologies in Plant Molecular Breeding Hee-Jong Koh,Suk-Yoon Kwon,Michael Thomson,2015-08-26 Recent progress in biotechnology and genomics has expanded the plant breeders' horizon providing a molecular platform on the traditional plant breeding, which is now known as 'plant molecular breeding'. Although diverse technologies for molecular breeding have been developed and applied individually for plant genetic improvement, common use in routine breeding programs seems to be limited probably due to the complexity and incomplete understanding of the technologies. This book is intended to provide a guide for researchers or graduate students involved in plant molecular breeding by describing principles and application of recently developed technologies with actual case studies for practical use. The nine topics covered in this book include the basics on genetic analysis of agronomic traits, methods of detecting QTLs, the application of molecular markers, genomics-assisted breeding including epigenomic issues, and genome-wide association studies. Identification methods of mutagenized plants, actual case studies for the isolation and functional studies of genes, the basics of gene transfer in major crops and the procedures for commercialization of GM crops are also described. This book would be a valuable reference for plant molecular breeders and a cornerstone for the development of new technologies in plant molecular breeding for the future.

The Role of a LIM Only Factor, LMO-4 in Breast Cancer ,2001 We recently identified a novel transcription factor, LMO-4, which exhibits prominent expression in epithelial cells, including that of the breast. Since previous members of the LIM only (LMO) gene family are oncogenes in lymphocytes, we hypothesized that LMO-4 may play a role in mammary gland development and cancer. To test this prediction, we are in the process of: (1) Defining more precisely the expression of LMO-4 during mammary gland development and in human breast cancer, (2) Analyzing transgenic mice which we have created to alter the activity of LMO-4 in mammary glands, and (3) Cloning DNA-binding protein with which LMO-4 interacts. We have found that LMO-4 is primarily expressed in the mammary gland during a stage when epithelial cells are proliferating in preparation for lactation. In addition, est databases show that LMO-4 is highly expressed in human breast cancer. We have generated transgenic lines for analyses and initiated cloning of LMO-4-interacting proteins. Our preliminary data suggest that expression of LMO-4 is associated with undifferentiated cellular stage, such as that found in breast cancer.

Chemistry & Physics of Carbon Ljubisa R. Radovic,2012-10-03 Written by distinguished researchers, the long-running Chemistry and Physics of Carbon series provides a comprehensive and critical overview of carbon materials in terms of molecular structure, intermolecular relationships, bulk and surface properties, and their behavior in current and emerging applications. Volume 31 not only retains the high-quality content and reputation of previous volumes, but also complements them with reliable and timely coverage of the latest advances in the field. Maintaining the high level established by its predecessors, this book contains a prestigious and authoritative series of review chapters covering both chemistry and physics of carbon. The book examines properties and behavior of carbon materials ranging from coal to graphite, from activated carbons, chars, cokes, and carbon blacks to carbon fibers, fullerenes, nanotubes, and graphene. It complements previous volumes in the series by presenting updated information on ‘disordered’ carbons, a complex field that impacts nearly all aspects of carbon materials research. It includes a chapter on novel methods of characterization of carbon materials using ever more powerful techniques, as well as a chapter on the use of carbon materials in

photocatalysis, a fast-moving and potentially exciting application. Emphasizing key experimental results and practical aspects, as well as important theoretical issues in every chapter, Volume 31 is a vital resource for those engaged in developing new technologies in a wide range of applicability of traditional and novel carbon materials from drug delivery to energy storage and conversion.
