Epstein Barr Virus Volume 1 Christian Münz, 2015-09-30 Epstein Barr virus (EBV) was discovered as the first human tumor virus around 50 years ago. Since its discovery in Burkitt's lymphoma it has been associated with various other malignancies, infectious mononucleosis and even autoimmune diseases. The two book volumes on EBV summarize the first 50 years of research on this tumor virus, starting with historical perspectives on discovery, oncogenicity and immune control, reviewing the role that the virus plays in the various associated diseases and concluding with a discussion on how the immune system keeps persistent EBV infection under control in healthy EBV carriers and can be used to treat EBV associated diseases. The respective 32 chapters are written by international experts from three continents for health care providers, biomedical researchers and patients that are affected by EBV. The assembled knowledge should help to understand EBV associated diseases better and to develop EBV specific vaccination in the near future.

Holland-Frei Cancer Medicine 8 James F. Holland, 2010 Holland Frei Cancer Medicine serves as a quick reference to current information on an extensive list of cancers, including breast, lung, thyroid, colorectal, ovarian, prostate, and gastric cancer, to name but a few. Presented as an accessible pocket-sized handbook, the chapters are organized in an outline format, offering only the most essential information on the etiology, staging (including TNM staging) and treatment for each cancer type. Individual chapters are devoted to the molecular biology of cancer, cancer prevention, cancer screening, the mechanisms of chemotherapy, and diagnostic imaging in cancer. Additionally, each chapter lists all the major phase III clinical trials, and therefore, serves as an excellent reference of the major randomized controlled trials for each cancer reported to date. Specific chapters are also dedicated to the discussion of oncologic emergencies, pain and palliation, and prescription complications. At the conclusion of the book, a glossary of oncologic terms and chemotherapeutic drug programs, a table of common cancer incidences, and an overview of the mechanisms, common uses, and related toxicities of

various anti-cancer agents are featured. In addition, performance status tables, mathematical formulas and a listing of common biomedical / cancer web sites are highlighted.

Apoptosis in Carcinogenesis and Chemotherapy George G. Chen, Paul B. S. Lai, 2009-02-22 Although research on carcinogenesis has focused more on cellular proliferation than on cell death, yet understanding the mechanism of apoptosis may have important implications for cancer therapy. This book brings together experts from around the world who will discuss the common cancers encountered in clinical practice in the laboratory setting. During the induction of these common cancers, the role of apoptosis in cellular and molecular changes is emphasized,

critically highlighting possible anti-cancer strategies. For those who are interested in carcinogenesis and for those who are seeking new approaches to anti-cancer therapy, this book is an important reference. It serves not only as a reference of the current understanding of apoptosis in common cancers but also an important bridge between the laboratory and clinical practice. The editors and contributors are to be congratulated in bringing together an important pool of up-to-date knowledge to light and further our interest in this exciting and expanding ?eld. Arthur K. C. Li Emeritus Professor of Surgery The Chinese University of Hong Kong v Preface The role of apoptosis in cancer development and emerging treatment strategies has rapidly expanded over the past few years. The novel discovery in the apoptotic pa- ways and their relevant molecules provides us not only the knowledge how tumors develop but also the opportunity to design new therapeutic tools to prevent or inhibit the growth of tumors with minimal side-effects. Undoubtedly, understanding the events involved at a molecular level can permit the manipulation of apoptosis for therapeutic purposes.

Infectious Agents Associated Cancers: Epidemiology and Molecular Biology Qiliang Cai, Zhenghong Yuan, Ke Lan, 2017-10-20 This book offers a state-of-the-art report on recent discoveries concerning viral, bacterial, and parasite infectious cancers. Cancer is one of the most common causes of death and diseases in human populations, and 15%-25% of human cancers in worldwide are considered to result from chronic infection by pathogens. Most oncology textbooks address genetic mutation, but not infectious agents such as viruses, bacteria and parasites. As such this book stimulates further research in the new area between cancers and chronic infection, and discusses the epidemiology and molecular biology of infectious causes of cancers. It also explores the prevention and treatment of infection-related cancers, and brings pathogenic research to the forefront in the never-ending endeavor to understand how pathogens maneuver and negotiate in a complex environment, including the micro/macro-environment of the human host. Further, it highlights the urgent need for a concerted program to develop vaccines and other diagnosis and interventions that will eventually help prevent and treat infectious cancers, and decrease their burden on human populations. It offers graduate students and researchers a comprehensive overview of the

infectious causes of cancers.

<u>Burkitt's Lymphoma</u> Erle S. Robertson, 2012-12-09 The study of Burkitt's lymphoma is now in its 6 decade beginning with its discovery by Dr. Dennis Burkitt in equatorial Africa in the mid to late 1950's. A large body of information is available which provides a current understanding of the underlying molecular changes that are linked to the initiation and development of Burkitt's lymphoma. This proposed volume will provide a comprehensive view of Burkitt's Lymphoma from the diagnosis to potential animal models for this disease and include a view from physicians who have a up close view of the patients in populations where the disease is rampant. We expect that this will be an excellent resource for Medical students and faculty as well as educated laypersons who have a person interest in the disease.

Epstein-Barr Virus and Human Disease · 1990 D. V. Ablashi, A. T. Huang, J. S. Pagano, G. R. Pearson, C. S. Yang, 2012-12-06 The Epstein-Barr virus (EBV), isolated in 1966, continues to draw worldwide attention as an important human pathogen. Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer. More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease mani festations observed following viral infection. It is hoped that by thorough investigation of this virus, clues to how cancer develops from a normal cell will surface. In addition, many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individu als with EBV - associated diseases. Thus, studies on this virus continue to provide new information of importance to our understanding of the malignant process. In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals, a series of international symposia was initiated in 1984. The first meeting was held in Loutraki, Greece, and was attended by approximately 100 participants. The second international symposium was held in St. Petersburg, Florida, in 1986, and was attended by approximately twice as many partici pants as attended the Loutraki meeting.

Mechanisms of DNA Tumor Virus Transformation Leonard J. Rosenthal,2001-01-01 Approximately 15% of human cancer incidence can be attributed to virus infection, i.e. viruses represent the second most important risk factor (after tobacco consumption) for cancer development in humans. Today, five virus types are known to be involved in causing human cancer: papillomaviruses, retroviruses, herpesviruses, hepadnaviruses, and flaviviruses. This volume provides a comprehensive review of a number of DNA tumor viruses. Leading experts in the field of tumor virology discuss up-to-date information, focusing on the transforming genes of DNA tumor viruses, the mechanisms of transformation and the in vitro methodology used for their identification and characterization. In vitro studies have revealed several common mechanisms of viral transformation. Presented in a clear and concise manner, this book will be of value to students as well as researchers in the fields of general biology, molecular biology, cell biology and microbiology.

Human Cancer Viruses John Nicholas, Kuan-Teh Jeang, T.-C. Wu, 2008-01-01 The first identification of a tumor-causing virus, Rous sarcoma virus, occurred almost 100 years ago, but it was not until the 1970s that the genetic basis for oncogenesis by this and other acutely transforming retroviruses was appreciated. Since then, numerous viral oncogenes and their corresponding cellular proto-oncogene counterparts have been identified, and these studies have contributed much to our understanding of crucially important aspects of cell biology and transformation. This book provides an up-to-date overview of the 6 major viruses that cause human cancers - HPV, HBV, HCV, EBV, KSHV and HTLV-1 - with respect to their molecular biology and epidemiology and to clinical aspects of disease, therapy and prevention. Contributed by over a dozen internationally renowned scientists, the chapters are comprehensively written and illustrated. The book is suitable for advanced students, postdoctoral researchers, scientists and clinicians who wish to understand the mechanisms leading to cellular transformation and oncogenesis by these viruses as a basis for the development of specific therapeutic and antiviral treatments.
