Epstein-Barr Virus and Associated Diseases

Thomas Tursz, 1993 Text in English & French. This book gathers together all the most recent world-wide knowledge in the various fields of research into the Epstein-Barr virus (EBV), from the most fundamental subjects (virology, molecular and cellular biology and immunology) through epidemiology, pathological anatomy, clinical research and therapeutics. Featured in the book are highly original chapters dealing with malignant lymphomas in AIDS patients, detection and prevention in developing countries, formulation of an anti-EBV vaccine. This comprehensive and clearly written book is a valuable and essential tool for all researchers and clinicians.

Autoimmunity Andrzej Górski, Hubert

Krotkiewski, Michał Zimecki, 2012-12-06 This book presents an excellent review of the mechanisms underlying the phenomena of autoimmunity. It provides not only an update of the field's state of the art, but also presents new concepts in the fundamentals and treatment of autoimmune disorders. The finest example of the new approach is understanding the nature of autoimmunity and the treatment of autoimmune diseases is the introductory article. The author opposes the current dogma that autoimmune disorders should be treated with immunosuppressors, and postulates rather the activation of the immune system, which may lead to redirecting the immune response to the protective, Th-2 type of immunity. A series of articles deals with several aspects of the

subject, such as the generation, progression, and regulation of autoimmune phenomena. The roles of pathogens, apoptosis, cytokines, complement components, and regulatory T cells are described, as well as the association between the immune and neurohormonal systems in major autoimmune disorders. This is not a textbook, but it is highly recommended for clinicians and university workers, and as supplementary reading for lecturers and students.

Fragmentation: Toward Accurate Calculations on Complex Molecular Systems Mark S.

Gordon, 2017-08-02 Fragmentation: Toward Accurate Calculations on Complex Molecular Systems introduces the reader to the broad array of fragmentation and embedding methods that are currently available or under development to facilitate accurate calculations on large, complex systems such as proteins, polymers, liquids and nanoparticles. These methods work by subdividing a system into subunits, called fragments or subsystems or domains. Calculations are performed on each fragment and then the results are combined to predict properties for the whole system. Topics covered include: Fragmentation methods Embedding methods Explicitly correlated local electron correlation methods Fragment molecular orbital method Methods for treating large molecules This book is aimed at academic researchers who are interested in computational chemistry, computational biology, computational materials science and related fields, as well as graduate students in these fields.

Modulation of Protein Stability in Cancer Therapy Kathleen Sakamoto,Eric Rubin,2009-04-20
This comprehensive monograph on the role of protein modulation in cancer therapeutics focuses on targeting molecules that regulate protein stability in a variety of tumors. Topics covered include ubiquitin ligases, deubiquitinating enzymes, and the proteasome.

Linear-Scaling Techniques in Computational Chemistry and Physics Robert Zaleśny,Manthos G. Papadopoulos,Paul G. Mezey,Jerzy Leszczynski,2011-03-21
Linear-Scaling Techniques in Computational Chemistry and Physics summarizes recent progresses in linear-scaling techniques and their applications in chemistry and physics. In order to meet the needs of a broad community of chemists and physicists, the book focuses on recent advances that extended the scope of possible exploitations of the theory. The first chapter provides an overview of the present state of the linear-scaling methodologies and their applications, outlining hot topics in this field, and pointing to expected developments in the near future. This general introduction is then followed by several review chapters written by experts who substantially contributed to recent developments in this field. The purpose of this book is to review, in a systematic manner, recent developments in linear-scaling methods and their applications in computational chemistry and physics. Great emphasis is put on the theoretical

aspects of linear-scaling methods. This book serves as a handbook for theoreticians, who are involved in the development of new efficient computational methods as well as for scientists, who are using the tools of computational chemistry and physics in their research.

Annual reports in computational chemistry. 2

[Anonymus AC06579881],2005

Progress in Physical Chemistry Volume 3 Franz Michael Dolg,2011-11-22 Progress in Physical Chemistry is a collection of recent »Review Articles« published in the »Zeitschrift für Physikalische Chemie«. The third volume of the series Progress in Physical Chemistry comprises 27 articles, most of them with review character, written by the members of the Priority Program (SPP) 1145 of the German Research Foundation (DFG).

Annual Reports in Computational Chemistry David C. Spellmeyer,2006-11-06 Annual Reports in Computational Chemistry is a new periodical providing timely and critical reviews of important topics in computational chemistry as applied to all chemical disciplines. Topics covered include quantum chemistry, molecular mechanics, force fields, chemical education, and applications in academic and industrial settings. Each volume is organized into (thematic) sections with contributions written by experts. Focusing on the most recent literature and advances in the field, each article covers a specific topic of importance to computational chemists. Annual Reports in Computational Chemistry is a 'must' for researchers and students wishing to stay up-to-

date on current developments in computational chemistry. * Broad coverage of computational chemistry and up-to-date information * The topics covered include quantum chemistry, molecular mechanics, force fields, chemical education, and applications in academic and industrial settings * Each chapter reviews the most recent literature on a specific topic of interest to computational chemists

DNA Tumor Viruses Blossom Damania,James Pipas,2008-12-19 This unique book focuses on the DNA viruses in the human population that are associated with cancers. It covers most of the viruses that are thought to contribute to human malignancy. This book represents a comprehensive review of the field of DNA tumor virology. Right now, while there are books out there that cover individual viruses that are also covered in this book, there is no single book that covers this topic comprehensively. This book is the first current, comprehensive review of its kind in the market.

Immunotherapy in 2020 Andreas Radbruch,Hans-Dieter Volk,Khusru Asadullah,Wolf-Dietrich Döcke,2007-06-22 This volume features contributions from participants of the ESRF symposium on Immunotherapy in 2020–Visions and Trends for Targeting Inflammatory Diseases held in Potsdam near Berlin, Germany, in October 2006. The symposium presentations covered the main mechanisms of immunoregulation.

Reviews in Computational Chemistry Kenny B. Lipkowitz,Thomas R. Cundari,Donald B. Boyd,2008-11-19 Computational chemistry is

increasingly used in conjunction with organic, inorganic, medicinal, biological, physical, and analytical chemistry, biotechnology, materials science, and chemical physics. This series is essential in keeping those individuals involved in these fields abreast of recent developments in computational chemistry.

Epstein Barr Virus Volume 2 Christian

Münz, 2015-10-01 Epstein Barr virus (EBV) was discovered as the first human tumor virus around 50 years ago. Since its discovery in Burkitt's lymphoma it has been associated with various other malignancies, infectious mononucleosis and even autoimmune diseases. The two book volumes on EBV summarize the first 50 years of research on this tumor virus, starting with historical perspectives on discovery, oncogenicity and immune control, reviewing the role that the virus plays in the various associated diseases and concluding with a discussion on how the immune system keeps persistent EBV infection under control in healthy EBV carriers and can be used to treat EBV associated diseases. The respective 32 chapters are written by international experts from three continents for health care providers, biomedical researchers and patients that are affected by EBV. The assembled knowledge should help to understand EBV associated diseases better and to develop EBV specific vaccination in the near future.

Ubiquitin and Protein Degradation Raymond Joseph Deshaies, 2005 Ubiquitin and Protein Degradation, Part B will cover chemical biology, ubiquitin derivatives and ubiquitin-like proteins, deubiquitinating enzymes, proteomics as well as techniques to monitor protein degradation. The chapters are highly methodological and focus on application of techniques. *Second part of the Ubiquitin and Protein Degradation series *Topics include: E1 Enzymes, E2 Enzymes, E3 Enzymes, Proteasomes, and Isopeptidases.

Issues in Biophysics and Geophysics Research and Application: 2011 Edition ,2012-01-09 Issues in Biophysics and Geophysics Research and Application: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Biophysics and

Geophysics Research and Application. The editors have built Issues in Biophysics and Geophysics Research and Application: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Biophysics and Geophysics Research and Application in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Biophysics and Geophysics Research and Application: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Parallel Computing in Quantum Chemistry Curtis L. Janssen, Ida M. B. Nielsen, 2008-04-09 An In-Depth View of Hardware Issues, Programming Practices, and Implementation of Key Methods Exploring the challenges of parallel programming from the perspective of quantum chemists, *Parallel Computing in Quantum Chemistry* thoroughly covers topics relevant to designing and implementing parallel quantum chemistry programs. Focusing on good parallel program design and performance analysis, the first part of the book deals with parallel computer architectures and parallel computing concepts and terminology. The authors discuss trends in hardware, methods, and

algorithms; parallel computer architectures and the overall system view of a parallel computer; message-passing; parallelization via multi-threading; measures for predicting and assessing the performance of parallel algorithms; and fundamental issues of designing and implementing parallel programs. The second part contains detailed discussions and performance analyses of parallel algorithms for a number of important and widely used quantum chemistry procedures and methods. The book presents schemes for the parallel computation of two-electron integrals, details the Hartree–Fock procedure, considers the parallel computation of second-order Møller–Plesset energies, and examines the difficulties of parallelizing local correlation methods. Through a solid assessment of parallel computing hardware issues, parallel programming practices, and implementation of key methods, this invaluable book enables readers to develop efficient quantum chemistry software capable of utilizing large-scale parallel computers.

Handbook of Immune Response Genes Tak W. Mak, John J. L. Simard, 2007-07-27 The study of immunology encompasses a vast and ever-growing body of information that in some way or other incorporates most areas of medical biological research. As the body of information in the medical sciences continues to increase its rate of expansion, one of the greatest challenges to investigators will be to integrate this information in a manner that is intellectually fruitful and productive. Considering the intended scope of this text, we could not pretend to have

gone too far toward achieving such an integration--and considering the pace of change, in its very best form a measured approximation of such lofty goals might be the most we could hope for.

Nevertheless, in these pages we have sought to produce a collection of information that is at once concise and up-to-date regarding areas where important developments are impacting on the way we understand the vertebrate immune system. In addition, although the information is geared toward advanced study, we have discussed some basic elements and concepts that we hope make the text a useful resource for both the immunologist and the nonspecialist. The intention is to provide the researcher, clinician, or advanced undergraduate student with a brief overview of specific components of the immune system, and to provide a place from which to begin further detailed study if necessary. To this end, we made every effort to supply extensive referencing--although limitations in space prevented exhaustive or complete referencing in some cases.
