Field Guide To The Birds Of South-East Asia Craig Robson,2020-02-06 This is the first-time flexi-cover edition of this classic field guide, which is the definitive volume on the region's birdlife. This award-winning book, which was first published in 2000, was fully updated in 2009 to include 76 new species for the region that were recent new discoveries for science, taxonomic 'splits' or had been recorded there for the first time. This comprehensive field guide to the birds of South-East Asia covers all of the 1,327 species recorded in the region and each has been fully illustrated. This edition has many new artworks and 16 more colour plates than the original guide, and the text has been meticulously updated to take in all the most recent information. The vast diversity of South-East Asian birdlife attracts increasing numbers of birdwatchers each year. Covering Thailand, Vietnam, Singapore, Peninsular Malaysia, Myanmar, Laos and Cambodia, this unique and indispensable guide covers in detail the identification, voice, breeding, status, habitat and distribution of all the species and distinctive subspecies of the region.

Global Register of Migratory Species Klaus Riede,2004

The Birds World Nicolae Sfetcu,2014-11-27 Birds are among the most extensively studied of all animal groups. Hundreds of academic journals and thousands of scientists are devoted to bird research, while amateur enthusiasts (called birdwatchers or, more commonly, birders) probably number in the millions. Birds are categorised as a biological class, Aves. The earliest known species of this class is Archaeopteryx lithographica, from the Late Jurassic period. According to the most recent consensus, Aves and a sister group, the order Crocodilia, together form a group of unnamed rank, the Archosauria. Phylogenetically, Aves is usually defined as all descendants of the most recent common ancestor of modern birds (or of a specific modern bird species like Passer domesticus), and Archaeopteryx. Modern phylogenies place birds in the dinosaur clade Theropoda. Modern birds are divided into two superorders, the Paleognathae (mostly flightless birds like ostriches), and the wildly diverse Neognathae, containing all other birds.

CRC Handbook of Avian Body Masses, Second Edition John B. Dunning, Jr.,2007-12-05 See what's new in the Second Edition: · Number of species included is increased from 6300 to over 8700, about 85% of the world's birds · Better data for many of the species included in the first edition – an exhaustive compilation of new data published from 1992 through 2007 · More comprehensive coverage of Latin America, Japan, Taiwan, Southeast Asia, and more coverage of research published in non-English language journals In 1992 the CRC Handbook of Avian Body Masses broke new ground by providing a compilation of body masses for 6300 species, about two-thirds of the world's species. The handbook instantly became the gold standard, cited in hundreds of scientific studies and a prominent fixture on the shelves of many ornithologists. Keeping the format that made the first edition so popular, the second edition features dramatic changes both in species coverage and the data quality. The new edition compiles the results of new samples that have been published for many of the birds included in the first edition, and data found for about 2400 new species, increasing the coverage to over 8700 species, about 85% of the world's birds. The order of species and families has been revised in the text to fit with the latest publications in avian taxonomy and systematics. The second edition includes an accompanying CD-ROM with a searchable electronic database.

A World Checklist of Birds Burt L. Monroe,Charles G. Sibley,1997-02-27 Many field ornithologists record where and when they identify species of birds, especially when they encounter a species out of its normal range or for the first time. Until now, however, a checklist based on the Sibley-Ahlquist-Monroe classification has not been available. In this book, Burt L. Monroe, Jr., and Charles G. Sibley provide a list of 9,702 living avian species based on their 1990 book Distribution and Taxonomy of Birds of the World and its 1993 Supplement.

As a result it boasts a rich and diverse avifauna, including some of the most spectacular and fascinating birds to be found anywhere in the world. This is the first truly comprehensive, taxonomically modern, and fully illustrated field guide to the Chinese birds. Over 1300 species are illustrated in 128 colour paintings, and fully described in the text. Colour distribution maps are provided for all illustrated species. The authors have both lived and worked in the region for many years, and have extensive experience of writing and illustrating bird guides. This important book will be a landmark in field guide publishing.

Long-Term Ecosystem Changes in Riparian Forests Hitoshi Sakio,2020-05-19 This open access book presents and analyzes the results of more than 30 years of long-term ecological research in riparian forest ecosystems with the aim of casting light on changes in the dynamics of riparian forests over time. The research, focusing on the Ooyamazawa riparian forest, one of the remaining old-growth forests in Japan, has yielded a number of interesting outcomes. First, it shows that large-scale disturbances afford various trees opportunities for regeneration and are thus the driving force for the coexistence of canopy trees in riparian forests. Second, it identifies changes in reproductive patterns, highlighting that seed production has in fact quantitatively increased over the past two decades. Third, it describes the decline in forest floor vegetation caused by deer grazing and reveals how this decline has affected bird and insect populations. The book illustrates the interconnectedness of phenomena within an ecosystem and the resultant potential for cascade effects and also stresses the need for long-term ecological studies of climate change impacts on forests. It will be of interest to both professionals and academics in the field of forest science.

Avian survivors Clive Finlayson,2011-12-31 Using a fresh approach that classifies birds according to their bioclimatic characteristics, Clive Finlayson views the history and distribution of Palearctic birds from a radical new angle. History and chance events play a central role in a story that has its origins before the asteroid impact that finished off the dinosaurs. In this book, Finlayson shows that the avifauna of the Palearctic long predates the glaciations of the last two million years, and had established itself gradually during the turbulent times of the Miocene and Pliocene, the lifting of Tibet and the drying of the continents having a major influence on these birds. Those that made it to the start of the glaciations were equipped to deal with whatever the climate could throw at them. They were the avian survivors, and they are still here with us today. Packed with figures and with a rich colour section, Avian Survivors tells the definitive story of the birds of the Palearctic, across space and time.

The Bird Almanac David Michael Bird,2004 Observing birds often raises many intriguing questions. Such as what is the incubation time for those robin eggs sitting in the nest above the porch light? What kinds of flowers attract humming birds? What are the migratory distances of various species? What are the major causes of bird deaths? The Bird Almanac is an invaluable resource, impressive in scope and depth and complemented with tables and illustrations. This Second Edition has been reformatted for easier use and now features quick-find tabs and an index. The first section of the book comprehensively covers the history, biology and behavior of birds. Bird physiology, biological systems and anatomy are explained in easy-to-understand terms and annotated illustrations. Other topics include: Fossil history of birds Reproduction and mortality Threatened and endangered species Major birding festivals and competitions How to attract specific species to the backyard Extensive resources for bird-lovers including the top birding locations in America Birding code of ethics The second section consists of an authoritative world checklist of bird species. The birds are organized by taxonomic order and listed by common and Latin name. The valuable information in The Bird Almanac fills in the gaps in knowledge of even the most seasoned birder.
