Culture And Reproduction W. Penn Handwerker,2019-03-11 This book originated in a conference on Culture and Reproduction held at the University of California. It discusses conceptual changes in demographic theory, focuses on micro-level issues, and explores linkages between micro-level processes and the macro-level constraints that shape those processes. World population growth, especially its fertility component, poses a major dilemma for policymakers throughout the world. However, theoretical developments in demography have not yet provided a solid foundation for understanding contemporary population processes. From an anthropological perspective, the current micro-level models do not properly recognize the cultural and biological constraints within which people make reproductive decisions. On the macro level, demographic transition continues to be linked to processes of modernization. Arguing that it is necessary to readdress micro-level issues in light of the cultural-historical variability of particular places and times and to explore linkages between macro- and micro-level phenomena through which population processes work themselves out, the contributors point the way to new theoretical formulations of the concept of culture, the nature of macro/micro linkages, and methods of placing demographic theory within the more encompassing framework of evolutionary theory.

Breaking New Ground for SLIFE Andrea DeCapua,Helaine W. Marshall,2023-05-08 Helping educators support and teach students with limited or interrupted schooling

Making the Transition to Classroom Success Helaine W. Marshall,Andrea DeCapua,2013-07-25 Features a chapter on flipped classrooms! Learners with no, minimal, or limited exposure to formal education

generally do not share the expectations and assumptions of their new setting; as a result, they are likely to find themselves confounded by the ways in which the language and content are presented, practiced, and assessed in Western-style educational settings. Institutions and teachers must tailor therefore their instruction to this population. *Making the Transition to Classroom Success: Culturally Responsive Teaching for Struggling Language Learners* examines how understanding secondary and adult L2 learners' educational paradigm, rooted deeply in their past experiences and cultural orientations, provides a key to the solution to a lack of progress. *Making the Transition to Classroom Success* builds on and expands on two earlier books, *Meeting the Needs of Students with Limited or Interrupted Formal Schooling* and *Breaking New Ground: Teaching Students with Limited or Interrupted Formal Education in U.S. Secondary Schools*. These previous books focused specifically on a subset of struggling L2 learners--those with limited or interrupted formal education (SLIFE) in U.S. secondary schools—and detailed the instructional model (MALP). *Making the Transition* broadens the applications of the MALP model to include academic thinking tasks, flipped classrooms, project design, and rubrics.

English and Students with Limited or Interrupted Formal Education Luis Javier Pentón Herrera, 2022-02-25 This book examines students with limited or interrupted education (SLIFE) in the context of English learners and teacher preparation courses from a cultural and social lens. The book is divided into five parts. Part I frames the conversation and contributions in this edited volume; Part II provides an overview of SLIFE, Part III focuses on teacher preparation programs, Part IV discusses the challenges faced by SLIFE in K-12 learning environments and Part V examines SLIFE in adult learning

environments. This book is unique in that it offers practical instructional tools to educators, thus helping to bridge theory and practice. Moreover, it retains a special focus on K-12 and adult SLIFE and has an inclusive and international perspective, which includes a novel theoretical framework to support the mental, emotional, and instructional needs of LGBTQ+ refugee students. The book is of interest to teacher educators, in-service and pre-service teachers, English literacy educators, graduate students, tutors, facilitators, instructors, and administrators working in organizations serving SLIFE in K-12 and adult learning environments.

Arteriogenesis and Therapeutic Neovascularization Elisabeth Deindl, Paul H. A. Quax, Thomas Schmitz-Rixen, 2020-11-04 For many years, arteriogenesis, also called collateral formation, has been regarded as being a beneficial process to restore blood flow to distal tissues in occluded arteries. Therefore, it is frequently referred to in relation to therapeutic angiogenesis. Despite the big clinical potential and the many promising clinical trials on arteriogenesis and therapeutic angiogenesis, the exact molecular mechanisms involved in the multifactorial processes of arteriogenesis are still not completely understood. A better understanding is needed in order to define successful clinical therapies. In this Special Issue, multiple aspects of arteriogenesis and therapeutic angiogenesis will be addressed, ranging from the role of inflammatory processes and immune cells, to growth factors, microRNAs and environmental factors like hypoxia. Therapeutic angiogenesis will also be discussed in relation to the atherosclerosis and intraplaque angiogenesis in hypoxic lesions, as well as specific forms of arteriogenesis in relation to spinal cord blood supply and aorta surgery. The effects of exercise, a frequently prescribed therapy for PAD patients, on

arteriogenesis are also discussed. Overall, the papers in this Special Issue on arteriogenesis and therapeutic angiogenesis provide important new insights in the underlying pathophysiological mechanism of these complex processes and may be helpful to define a successful future intervention directed at therapeutic angiogenesis.

Medical Computer Vision: Algorithms for Big Data Bjoern Menze,Georg Langs,Albert Montillo,Michael Kelm,Henning Müller,Shaoting Zhang,Weidong (Tom) Cai,Dimitris Metaxas,2014-12-09 This book constitutes the thoroughly refereed post-workshop proceedings of the International Workshop on Medical Computer Vision: Algorithms for Big Data, MCV 2014, held in Cambridge, MA, USA, in September 2019, in conjunction with the 17th International Conference on Medical Image Computing and Computer-Assisted Intervention, MICCAI 2014. The one-day workshop aimed at exploring the use of modern computer vision technology and big data algorithms in tasks such as automatic segmentation and registration, localization of anatomical features and detection of anomalies emphasizing questions of harvesting, organizing and learning from large-scale medical imaging data sets and general-purpose automatic understanding of medical images. The 18 full and 1 short papers presented in this volume were carefully reviewed and selected from 30 submission.

US Agricultural and Food Policies Gerald D. Toland, Jr.,William E. Nganje,Raphael Onyeaghala,2017-09-18 Policy analysis is a dynamic process of discovery rather than a passive exercise of memorizing facts and conclusions. This text provides opportunities to practice the craft of policy analysis by

engaging the reader in realistic case studies and problem-solving scenarios that require the selection and use of applicable investigative techniques. *US Agricultural and Food Policies* will assist undergraduate students to learn how policy choices impact the overall performance of agricultural and food markets. It encourages students to systematically investigate scenarios with appropriate positive and normative tools. The book emphasizes the importance of employing critical thinking skills to address the complexities associated with the design and implementation of twenty-first-century agricultural and food policies. Students are asked to suspend their personal opinions and emotions, and instead apply research methods that require the careful consideration of both facts and values. The opportunities to build these investigative skills are abundant when we consider the diversity of modern agricultural and food policy concerns. Featuring case studies and critical thinking exercises throughout and supported by a Companion Website with slides, a test bank, glossary, and web/video links, this is the ideal textbook for any agricultural policy class.

Novel Vaccination Strategies Stefan H. E. Kaufmann, 2006-01-24 The protection mode of most available vaccines is based on antibody responses. Since efficient immune responses to many pathogens rely on activating all arms of the immune system, traditional vaccine development does not provide efficient protection against many diseases. Novel vaccination strategies need to allow presentation of antigens that activate the full array of the immune response in the right composition and should prevent pathogen entry by mobilizing the mucosal immune response. New technological advances optimize the immunogenicity of 'live' and sub-unit vaccines. This book offers an interdisciplinary overview on research and future

strategies for rational vaccine design based on recent developments in molecular biology and immunology. It covers new aspects of the immunological interplay between prokaryotic and eukaryotic systems as well as achievements in the development of novel vaccine candidates. Chapters on edible vaccines, on vaccines against bioterror agents and on economical and safety aspects of novel vaccine development round off this title.

Molecular Biology and Pathogenicity of Mycoplasmas Shmuel Razin,Richard Herrmann,2007-05-08 was the result of the efforts of Robert Cleverdon. The rapidly developing discipline of molecular biology and the rapidly expanding knowledge of the PPLO were brought together at this meeting. In addition to the PPLO specialists, the conference invited Julius Marmur to compare PPLO DNA to DNA of other organisms; David Garfinkel, who was one of the first to develop computer models of metabolism; Cyrus Levinthal to talk about coding; and Henry Quastler to discuss information theory constraints on very small cells. The conference was an announcement of the role of PPLO in the fundamental understanding of molecular biology. Looking back 40-some years to the Connecticut meeting, it was a rather bold enterprise. The meeting was international and inter-disciplinary and began a series of important collaborations with influences resonating down to the present. If I may be allowed a personal remark, it was where I first met Shmuel Razin, who has been a leading figure in the emerging mycoplasma research and a good friend. This present volume is in some ways the fulfillment of the promise of that early meeting. It is an example of the collaborative work of scientists in building an understanding of fundamental aspects of biology.
