TM 9-751 155-MM Gun Motor Carriage M12 and Cargo Carrier M30 Technical Manual War Department, 2013-05-01 The 155-mm Gun Motor Carriage M12 was a U.S. self-propelled gun developed during the Second World War. Only 100 were built; sixty in 1942 and another forty in 1943. The M12 was built on the chassis of the M3 Lee tank. It had an armored driver's compartment, but the gun crew were located in an open topped area at the back of the vehicle. An earth spade at the rear was employed to absorb recoil. During 1943 the vehicles were used for training or put into storage. Before the invasion of France, seventy four M12s were upgraded in preparation for combat operations. They were employed successfully throughout the campaign in North-West Europe. Although designed primarily for indirect fire, during assaults on heavy fortifications the M12s were sometimes employed in a direct-fire role. Limited storage space meant that only ten projectiles and propellant charges could be carried on the vehicle. Given this, a similar vehicle without the gun was produced as the Cargo Carrier M30. This was designed to transport the gun

crew and additional ammunition. In operational conditions the M12 and M30 would serve in pairs. The M30, which could carry forty rounds of 155-mm ammunition, was armed with a .50-caliber Browning M2 machine gun. Created in 1944, this technical manual reveals a great deal about the M12's and M30's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details many aspects of the M12's engine, cooling, power, suspension and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Please note, this text was not produced in large numbers and this replica may have some pages that are substandard in quality. Care has been taken however to preserve the integrity of the text.

Matrix Variate Distributions A K Gupta, D K Nagar, 2018-05-02 Useful in physics, economics, psychology, and other fields, random matrices play an important role in the study of multivariate statistical methods. Until now, however, most of the material on random matrices could only be found scattered in various statistical journals. Matrix Variate Distributions gathers and systematically presents most of the recent developments in continuous matrix variate distribution theory and includes new results. After a review of the essential background material, the authors investigate the range of matrix variate distributions, including: matrix variate normal distribution Wishart distribution Matrix variate t-distribution Matrix variate beta distribution F-distribution Matrix variate Dirichlet distribution Matrix quadratic forms With its inclusion of new results, Matrix Variate Distributions promises to stimulate further research and help advance the field of multivariate statistical analysis.

Introduction to the Mechanics of Space Robots Giancarlo Genta, 2011-10-27 Based on lecture notes on a space robotics course, this book offers a pedagogical introduction to the mechanics of space robots. After presenting an overview of the environments and conditions space robots have to work in, the author discusses a variety of manipulatory devices robots may use to perform their tasks. This is followed by a discussion of robot mobility in these environments and the various technical approaches. The last two chapters are dedicated to actuators, sensors and power systems used in space robots. This book fills a gap in the space technology literature and will be useful for students and for those who have an interest in the broad and highly interdisciplinary field of space robotics, and in particular in its mechanical aspects.

Peasants and Slaves Alessandro Launaro, 2011-05-19 A radical interdisciplinary reappraisal of the agrarian background to the political events which shaped the destiny of Rome (from Republic to Empire). The book actively builds upon the textual and archaeological evidence to trace the fate of the Italian rural free population during a crucial period of its history.
