Shock Waves and High-Strain-Rate Phenomena in Metals Mare Meyers, 2012-12-06 The scientific understanding of high-velocity deformation has advanced substantially during the past decade. On the one hand, the framework for a theory explaining the metallurgical effects of shock waves is beginning to take shape; on the other hand, the technological applications of high strain-rate processes have found their way into industries in countries around the world. Explosive cladding, welding, forming, compaction and consolidation, cutting, and hardening, in addition to high energy-rate deformation processes using other energy sources, are some of the topics of contemporary technological importance. Metallurgical effects are of the utmost importance in both the scientific understanding of the phenomena involved, and in the successful development and utilization of the associated applications. The international conference upon which this book is based had as its major objectives the acceleration of progress in the field of high-strain rate deformation and fabrication, including applications, by providing a forum for the exchange of state-of-the art information on the metallurgical effects of high strain-rate deformation and fabrication; and the organization of this information into a timely and coherent body of knowledge focused around significant areas and applications. This volume is a manifestation of these objectives. In addition, the contents of this book were organized to provide for a somewhat logical perspective of the fundamentals, development, and state-of-the-art applications of high strain-rate and shock phenomena.

Computer Analysis of Images and Patterns Dmitry Chetverikov,Walter Kropatsch,1993-08-30

This volume constitutes the proceedings of the 5th International Conference on Computer Analysis of Images and Patterns (CAIP'93), held in Budapest, Hungary, in September 1993. Formerly, the events in this biennial conference series were thought as a forum where East European researchers and professionals from academia and industry had an opportunity to discuss their results and ideas with Western colleagues active in image processing and pattern recognition. Now, CAIP'93 has a much more international scope, and in the future these conferences will not any longertake place only in East European countries, but roam throughout whole Europe. Besides invited talks by Belikova, Gimel'farb, Haralick and Roska, the volume contains 114 contributions, either presented as lectures or posters and carefully selected by a highly competent international program committee from a total of some 230 submissions; thus the book gives a thorough survey on recent research results and their applications in image processing and pattern recognition. The proceedings is organized in 20 sections, for example on image data structures, image processing, edges and contours, Hough transforms and related methods, shape, motion, 3-D vision, character recognition and document processing, biomedical applications, industrial applications, and neural networks.

Lawrence Grassi Elio Costa,Gabriele Scardellato,2015-05-27 Lawrence Grassi was a trailblazer in every sense of the word. A working-class man of humble Italian origins who worked as a labourer and a coal miner for most of his life, Grassi had a deep passion for the Rocky Mountains. He was famous in the region for his commitment as a guide, a mountain climber, and a builder of greatly admired hiking trails. Today, in or near Canmore, his name graces a mountain, two lakes, and a school, and he is commemorated at Lake O'Hara in Yoho National Park. In Lawrence Grassi: From Piedmont to the

Rocky Mountains, Elio Costa and Gabriele Scardellato uncover the deeply private man behind this legend, from his birth in the small Italian village of Falmenta to his long and inspirational career in Canada. Using previously unexamined family letters and extensive information on Grassi's cohort of Italian immigrants, the authors reconstruct his personal and professional life, correcting myths and connecting his story to the long history of Italian immigration to Canada. The definitive biography of this Canadian mountain hero, Lawrence Grassi will be essential reading for those interested in the history of immigration, sport, and the Rocky Mountains.

Model-Building Approach in Multiple Regression Zainodin Hj Jubok, Khuneswari Gopal Pillay, Noraini Abdullah, 2019-11-18 The problems faced by the undergraduate students in analysing the data on multiple regressions and the importance of this method had inspired the authors to come up with this book. Regression analysis is commonly used by most researchers in business, social and behavioural sciences, biological sciences and many other fields. But there is no proper procedure or approach of model-building in regression analysis. Therefore, this book is aimed at illustrating the procedures to find the best model and the model-building approach. The model-building approach is important in obtaining the best model that well describes the corresponding data set. This approach can be used in various research fields such as in economics, environmental, biological and medical sciences. The multiple regression model-building approach is applicable in various fields of research. It is very useful for researchers to obtain the best model that well describes the data. The approach is also useful in identifying the factors that will affect the dependent variable. The overall thrusts of the authors' efforts have been geared in explaining explicitly the statistical method using regression

analysis, the model building procedures and its applications, so as to meet the needs of today's students. A substantial effort has gone in addressing multicollinearity issues and illustrating steps to overcome them.

Physics Of Creep And Creep-Resistant Alloys F R N Nabarro, F. de Villiers, 2018-05-08 Unique in its approach, this introduction to the physics of creep concentrates on the physical principles underlying observed phenomena. As such it provides a resource for graduate students in materials science, metallurgy, mechanical engineering, physics and chemistry as well as researchers in other fields. Following a brief mathematical treatment, the authors introduce creep phenomena together with some empirical laws and observations. The mechanisms of creep and diffusion under varying experimental conditions are subsequently analysed and developed. The second half of the text considers alloying in greater detail as well as exploring the structure and properties of superalloys and stress effects in these materials.

Choi, 2011-07-12 This book contains 17 papers from the Innovative Processing and Synthesis of Ceramics, Glasses and Composites and Advances in Ceramic Matrix Composites symposia held during the 2010 Materials Science and Technology (MS&T'10) meeting, October 17-21, 2010, Houston, Texas. Topics include: Fiber Composites; Modeling and Characterization; Nanomaterials; Testing; Microstructure-Property Relationships; Advanced Coatings; and Processing Methods.

State-of-the-Art in Content-Based Image and Video Retrieval Remco Veltkamp, Hans Burkhardt, Hans-Peter Kriegel, 2001-10-31 Images and video play a crucial role in visual information systems and multimedia. There is an extraordinary number of applications of such systems in

entertainment, business, art, engineering, and science. Such applications often involved large image and video collections, and therefore, searching for images and video in large collections is becoming an important operation. Because of the size of such databases, efficiency is crucial. We strongly believe that image and video retrieval need an integrated approach from fields such as image processing, shape processing, perception, database indexing, visualization, and querying, etc. This book contains a selection of results that was presented at the Dagstuhl Seminar on Content-Based Image and Video Retrieval, in December 1999. The purpose of this seminar was to bring together people from the various fields, in order to promote information exchange and interaction among researchers who are interested in various aspects of accessing the content of image and video data. The book provides an overview of the state of the art in content-based image and video retrieval. The topics covered by the chapters are integrated system aspects, as well as techniques from image processing, computer vision, multimedia, databases, graphics, signal processing, and information theory. The book will be of interest to researchers and professionals in the fields of multimedia, visual information (database) systems, computer vision, and information retrieval.

Medicinal and Aromatic Plants of Turkey akos Mathe,Kenan Turgut,2023-11-01 This is meant to be

the 10th volume of the series Medicinal and Aromatic Plants of the World. Similarly, to the previous volumes, the work will deal -in a monographic form- with MAPs characteristic/famous or simply known of Turkey, a large country that is connecting Europe with Asia. Turkey has extremely rich and varied topographic/ecologic conditions. As a result, the flora of Turkey abounds in an astonishingly great number of endemic MAP species. Traditional, present and possible prospective uses will be discussed. Scientific and technological achievements will be equally presented. Briefly, the volume is aimed to look carefully at our present knowledge of this vast interdisciplinary domain of medicinal and aromatic plants with a focus on Turkey. In the era of global climate change and Covid-pandemics, building on the huge Turkish traditions, the proposed volume of the series is expected to make an important contribution to the better knowledge and understanding of the MAP wealth of the World.

Perspectives in Photosynthesis Joshua Jortner, A. Pullman, 2012-12-06 The Twenty-Second Jerusalem Symposium reflected the high standards of these distinguished scientific meetings, which convene once a year at the Israel Academy of Sciences and Humanities in Jerusalem to discuss a specific topic in the broad area of quantum chemistry and 'biochemistry. The topic at this year's Jerusalem Symposium was Perspectives in Photosynthesis, which constitutes a truly interdisciplinary subject of central interest to biophysicists, and biologists. chemists The main theme of the Symposium was built around a conceptual framework for the acquisition, storage and useful disposal of energy in photosynthetic reaction centres. Emphasis was placed on the elucidation of primary charge separation processes in photosynthesis and their exploration within the framework of the electron transfer theory, on the interrelationship between structural data, inter actions and electron transfer kinetics, and on the role of protein dynamics in primary processes in photosynthesis. The interdisciplinary nature of these research areas was deliberated by intensive and extensive

interactions between scientists from different disciplines and between theory and experiment. This volume provides a record of the invited lectures at the Symposium.
