**M24 Chaffee Light Tank 1943–85** Steven J. Zaloga,2022-02-17 The history of US light tanks during World War II is a chequered one. The Light Battalions of US Armored Divisions were initially filled with M3A1 and M5 Stuart tanks, however, on the battlefields of North Africa it was realised that these were disastrously under armoured and gunned, and a replacement, or the abandonment of light tank doctrine, was desperately needed. It wasn't until the last few months of WWII that the M24 Chaffee came into service and it was extensively used in combat from the Battle of the Bulge to the final campaigns in Germany. This book will trace the history of this design, its combat record in World War II, its many variants, and its extensive combat record post 1945.

**M24 Chaffee Light Tank Technical Manual: TM 9-729** Department of the Army,2013-08 The Light Tank M24 was an American tank used during the later part of World War II and in postwar conflicts including the Korean War and, with the French, in the War in Algeria and the First Indochina War. In British service it was given the service name Chaffee, after the United States Army General Adna R. Chaffee, Jr., who helped develop the use of tanks in the United States armed forces. In April 1943, the Ordnance Corps, together with Cadillac division of General Motors, started work on the new project, designated Light Tank T24. Every effort was made to keep the weight of the vehicle under twenty tons. The armor was kept light, with the glacis plate only twenty five mm thick (but sloped at sixty degrees from the vertical). A new lightweight 75 mm gun was developed, a derivative of the gun used in the B-25H Mitchell bomber. The gun had the same ballistics as the M3, but used a thinly walled barrel and different recoil mechanism. The design also featured wider (sixteen inch) tracks and torsion bar suspension. It had a relatively low silhouette and a three-man turret. On October 15, 1943 the first pilot vehicle was delivered and production began in 1944 under the designation Light Tank M24. By the time production was stopped in August 1945, 4,731 M24s had left the assembly lines. Created in 1951, this technical manual reveals a great deal about the Chaffee's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details many aspects of its engine, cooling, power and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

*M24 Chaffee, Vol. 1* David Doyle,2019-11-28 The M24 Chaffee was the finest light tank developed by the US during WWII. This tank was

developed by Cadillac, which, along with farm equipment manufacturer Massey-Harris, produced the vehicles. These tanks were used by the US during WWII and Korea and, during the post-WWII era, were supplied to numerous allied nations. This book chronicles the development and use of the vehicle from concept to combat. Through dozens of archival photos, many never before published, as well as detailed photographs of some of the finest existent examples of these vehicles, this iconic tank hunter is explored and its history is explained.

*M24 Chaffee, Vol. 2* David Doyle, 2020-06-28 The M24 Chaffee was the finest light tank developed by the US during WWII. Utilizing the M24 chassis--developed by Cadillac--the US Army procured a family of fighting vehicles, including the M19 Twin 40 mm Gun Motor Carriage, the M37 105 mm Howitzer Motor Carriage, and the M41 155 mm Howitzer Motor Carriage, all of which are covered in this second volume on the Chaffee. While all of these motor carriages were too late to see combat in WWII, all were widely used during the Korean War, with many at the front of the fighting. This book chronicles the development and use of these vehicles from concept to combat. Through dozens of archival photos, many never before published, as well as detailed photographs of some of the finest existent examples of these vehicles, this iconic tank hunter is explored and its history is explained.

By the time production was stopped in August 1945, 4,731 M24s had left the assembly lines. The M41 155-mm Howitzer Motor Carriage was based on the M24 Chaffee Light Tank fitted with an M1 155-mm Howitzer. In addition to the Howitzer, the M41 carried twenty two rounds of 155-mm ammunition. Also known as the Gorilla, the M41 eventually saw action in Korea. Created in 1947, this technical manual reveals a great deal about both the Chaffee's and M41's design and capabilities. Intended as a manual for those charged with maintenance, it details many aspects of the Chaffee's track and suspension, hull, turret and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

**American Tanks of WWII** Thomas Berndt, Spectacular color photographs combined with informative captions tell the stories of these popular subjects.

**Modelling US World War II Armoured Fighting Vehicles** Tom Cole, 2022-03-21 Aimed at military model makers and wargamers who are interested in the armoured fighting vehicles of the United States as used throughout World War II, this book follows on from *Modelling British World War II Armoured Vehicles* by the same author. The book places its emphasis on US Army and US Marine Corps AFVs modelled mainly in 1/72 and 1/48 scales, in a deliberate departure from the more popular 1/35 scale, to encourage and inspire model makers who are new to or less familiar with these scales. Illustrated with over 270 colour photos this book features every major US AFV used in World War II, with many models shown in various stages of construction and paintings. It presents step-by-step guides demonstrating the painting techniques appropriate for different scales and includes an additional section showing how to paint wargames models. There is also a review of how the USA developed tanks and other armoured vehicles from the interwar period through to the end of World War II. This fascinating story will help model makers and wargamers give the vehicles they build an historical context.

**M10 and M36 Tank Destroyers 1942–53** Steven J. Zaloga, 2012-08-20 The US Army had a unique tactical doctrine during World War II, placing the emphasis for tank fighting on its Tank Destroyer Command whose main early-war vehicle was the M10 3-inch Gun Motor Carriage, based on the

reliable M4A2 Sherman tank chassis. This durable and versatile vehicle saw combat service from the North Africa campaign in 1943. By 1944, its gun was not powerful enough and it was rearmed with the new 90 mm gun, becoming the M36 90mm Gun Motor Carriage. This book details one of the only US armoured vehicles capable of dealing with the Panther and Tiger during the Battle of the Bulge.

**Top 50 Tanks** Martin Dougherty,2017-09-19 Counting down from 50 to the very best at number 1, Top 50 Tanks features the greatest armored fighting vehicles from World War I to present day.

*Tanks, 76-MM Gun M41 and M41a1 Walker Bulldog: FM 17-80* Department of the Army,2013-10 The M41 Walker Bulldog was a U.S. light tank developed to replace the M24 Chaffee. While the M24 Chaffee was a successful design, its main gun was not effective enough against well armored opposition. Although the primary mission of a light tank was scouting, the U.S. Army wanted one with more powerful armament. The development of the new tank, T37, began in 1947. The vehicle was designed to be air-transportable, and the desired anti-tank capabilities were provided by installing a long 76-mm gun with an advanced rangefinder. In 1949, with the adoption of a less ambitious rangefinder, the project's designation was changed to T41. Production started in 1951 at Cadillac's Cleveland Tank Plant, and by 1953 the tank replaced the M24 in the United States Army. Initially the M41 was nicknamed Little Bulldog, then renamed Walker Bulldog after General Walton Walker, who was killed in a jeep accident in Korea in 1950. The Walker Bulldog saw limited combat with the U.S. Army during the Korean War, but for the most part, the conflict served as a testing ground to work out the tank's rangefinder. In 1954, the M41A1 variant was produced with a hydraulic turret traverse instead of an electrical one. The more compact system allowed for increased ammunition. Created in 1956, this field manual reveals a great deal about the M41 and M41A1's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details the sighting equipment, crew formations, firing duties and more. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

**Tanks in the Easter Offensive 1972** William E. Hiestand,2022-02-17 This study explains how the armies of North and South Vietnam, newly equipped with the most modern Soviet and US tanks and weaponry, fought the decisive armored battles of the Easter Offensive. Worn out by years of fighting against Viet Cong guerillas and North Vietnamese regulars, the United States had almost completely withdrawn its forces from Vietnam by early 1972. Determined to halt the expansion and improvement of South Vietnamese forces under the U.S. "Vietnamization" program, North Vietnam

launched a major fourteen-division attack in March 1972 against the South that became known as the “Easter Offensive.” Hanoi's assault was spearheaded by 1,200 tanks and was counteracted on the opposite side by Saigon's newly equipped armored force using U.S. medium tanks. The result was ferocious fighting between major Cold War-era U.S. and Soviet tanks and mechanized equipment, pitting M-48 medium and M-41 light tanks against their T-54 and PT-76 rivals in a variety of combat environments ranging from dense jungle to urban terrain. Both sides employed cutting-edge weaponry for the first time, including the U.S. TOW and Soviet 9M14 Malyutka wire-guided anti-tank missiles. This volume examines the tanks, armored forces and weapons that clashed in this little-known campaign in detail, using after-action reports from the battlefield and other primary sources to analyze the technical and organizational factors that shaped the outcome. Despite the ARVN's defensive success in October 1972, North Vietnam massively expanded its armor forces over the next two years while U.S. support waned. This imbalance with key strategic misjudgments by the South Vietnamese President led to the stunning defeat of the South in 1975 when T54 tanks crashed through the fence surrounding the Presidential palace and took Saigon on 30 April 1975.

**The World's Most Powerful Tanks** Michael E. Haskew, 2016-12-15 *The World's Most Powerful Tanks* is an expert examination of the most successful tanks of the past hundred years. Beginning with the prototype Mark V Male in 1917, the book features 52 of the best armored fighting vehicles from World War I, World War II, through the Cold War to today. Each entry is examined over two spreads and includes a brief description of the tank's development and history, a color profile artwork, photographs, key features, and specifications tables. Packed with more than 200 artworks and photographs, *The World's Most Powerful Tanks* is a colorful guide for the military historian and military technology enthusiast.

**Tank Spotter's Guide** The Tank Museum, 2011-12-20 A compact guide to 40 of iconic tanks which have shaped the face of modern warfare. Invented during World War I to break the grim deadlock of the Western Front trenches, tanks have gone on to revolutionise warfare. From the lightning Blitzkrieg assaults of World War II to the great battles in the Middle Eastern desert and the largest ever tank battles on the Eastern Front, tanks have become one of the key components of the 'combined arms' philosophy of warfare. This pocket guide gives the reader all of the essential information on 40 of history's premiere tanks, including the Tiger, Sherman, Panther and M1A1 Abrams. Each tank is presented with a detailed drawing to aid recognition.

"Ironsides" Harold A. Skaarup, 2011-08-12 Major Hal Skaarup has woven together an informative and detailed synopsis of the carefully preserved and restored armoured fighting vehicles on display in Canada. He highlights the importance of these upon key turning points in history when these AFVs were in use as tools of war at home and overseas. We often associate the evolution of military prowess with the advancement of sophisticated technology. Major Skaarup's descriptions of Canadian armour as it evolved to the level it has today reveals that military planners have had to be continuously creative in adapting to the changes in modern combat. They had to devise many intricate techniques, tactics and procedures to overcome the insurgents and opposition forces faced in Afghanistan and future overseas missions where Canadian armour will be brought into play. This guide book will show the interested reader where to find examples of the historical armour preserved in Canada, and perhaps serve as a window on how Canada's military contribution to safety and security in the world has evolved.

*Carburetors (Carter)* United States. War Department, 1944

United States Army Armored Divisions of the Second World War Michael Green, 2018-10-30 The routing of the British and French Armies in May and June 1940 by the Wehrmachts armored divisions caused a major rethink by the US Armys senior leadership. The result was the formation of the two armored divisions in July 1940; the first named Old Ironside and second designated Hell on Wheels. In 1941, a further three armored divisions were created; the third (Spearhead), the fourth (remained unnamed) and the fifth called Victory. The following year seven more were created, the sixth, seventh, eighth, ninth, tenth, eleventh and twelfth. The final two armored divisions formed in 1943 numbered the sixteenth and twentieth. All but one of these powerful formations went on to see service in the European Theatre of Operation (ETO); the exception being the 1st armored Division that served in North Africa, Sicily and Italy. These fourteen divisions proved their effectiveness against the Axis forces. In this carefully researched book military historian and much published author Michael Green explains their operational and fighting doctrine. Equipment enthusiasts will appreciate the lavish images and informed captions of the armored fighting vehicles and other equipment employed.
