**Experimental Investigation of a Mach 5 Isentropic Spike Inlet at and Below Design Speed** Leonard E. Stitt, Richard J. Flaherty, 1959

*Recovery Temperature Transition and Heat-transfer Measurements at Mach 5* Paul F. Brinich, 1961

Experimental Investigation of a Fin-cone Interference Flow Field at Mach 5 Gillerlain, Jr. (Joseph D.), 1976 The general purpose of this investigation was to study the separated flow field associated with a fin-body juncture. Specific objectives included: (a) determining the severity and extent of aerodynamic heating, (b) providing flow visualization results to illustrate the flow structure, and (c) obtaining a data base of heat-transfer and surface-pressure measurements upon which to develop future analytical relations to predict peak interference heating levels. Tests were conducted at Mach 5 over a unit Reynolds number range of 4.5 to 26 million per foot. A fin-cone model was used. The data consist of surface- pressure distributions, heat-transfer measurements using the phase-change paint technique, and schlieren and oil-flow photographs. Results are presented for several fin-cone geometries to include fin sweep and fin-cone gap. Where possible, comparisons are made with fin-flat-plate data.

**Separated Flow Phenomena on a Slender Cone at Mach 5** Robert H.

Feldhuhn, Allen Edward Winkelmann, 1969 An experimental investigation illustrating some separated flow phenomena associated with highly inclined circular cones was conducted at a nominal Mach number of 5 and at nominal free stream Reynolds numbers per foot of 4,800,000. Surface static pressure measurements, Pitot pressure surveys, schlieren photographs, vapor screen photographs, and surface sublimation measurements were obtained on a sharp 5 degree semi-vertex angle cone at angles of attack up to 40 degrees. The static pressure distribution along the most leeward meridian generator was found to be dependent upon the Reynolds number based upon the distance from the vertex of the cone. The vapor screen photographs at 40 degrees angle of attack indicate the existence of imbedded shock waves in the flow field on the leeward side of the cone. The Pitot tube surveys and the surface sublimation photographs indicate the existence of a region of attached flow near the leeward meridian plane. The surface sublimation photographs also indicate the possible existence of a secondary vortex. (Author).

**Mach 5 to 7 RBCC Propulsion System Testing at NASA-LeRC HTF** H. Douglas Perkins, Scott R. Thomas, William D. Pack, 1996

*An Experimental Study of the Turbulent Wake Behind a Cone at Mach 5* William C. Ragsdale, 1966 An experimental study of the turbulent wake behind a 9° adiabatic cone at Mach 5 has been carried out in the U.S. Naval Ordnance Laboratory Hypersonic Tunnel. Cone models with base diameters of 2 inches and 4 inches were mounted in the wind tunnel test section with fine wires. Pitot pressure, pressure on a small cone probe and total temperature were measured with probes mounted on a vertical traversing mechanism. The measured pressures and temperatures were used to calculate the Mach number, static pressure, static temperature, velocity and density in the wake.

**Calibration of Lewis Hypersonic Tunnel Facility at Mach 5, 6, and 7** Richard R. Cullom, Erwin A. Lezberg, 1972

*Interpreting Mach* John Preston, 2021-03-18 This volume presents new essays on the work and thought of physicist, psychologist, and philosopher Ernst Mach. Moving away from previous estimations of Mach as a pre-logical positivist, the essays reflect his rehabilitation as a thinker of direct relevance to debates in the contemporary philosophies of natural science, psychology, metaphysics, and mind. Topics covered include Mach's work on acoustical psychophysics and physics; his ideas on analogy and the principle of conservation of energy; the correct interpretation of his scheme of 'elements' and its relationship to his 'historical-critical' method; the relationship of his thought to movements such as American pragmatism, realism, and neutral monism, as well as to contemporary figures such as Friedrich Nietzsche; and the reception and influence of his works in Germany and Austria, particularly by the Vienna Circle.

**Evaluation of the Low-Speed Stability and Control Characteristics of a Mach 5.5 Waverider Concept** National Aeronautics and Space Administration (NASA), 2018-07-03 Static force and moment tests of a 0.062-scale model of a hypersonic vehicle study concept known as the LOFLYTE(TM) configuration were conducted in the Langley 12-Foot Low-Speed Tunnel. These tests looked primarily at the low-speed static stability and control characteristics of this configuration. Data were obtained over an angle-of-attack range of -5 deg. to 22 deg. at sideslip angles that ranged between -10 deg. and 10 deg. The tiperons were sized to provide enough pitch control to trim the vehicle up to  $\alpha = 16$  deg. with no more than 10 deg. of surface deflection and data obtained in this test showed that 10 deg. of tiperon deflection was

nearly sufficient to trim the configuration up to the desired angle of attack. Because of the pitching-moment characteristics of the LOFLYTE(TM) configuration, there is a reasonably high level of unpowered trimmed lift at nominal takeoff and approach to landing that should allow for acceptable takeoff and landing speeds for this vehicle. Initial evaluation of the directional stability characteristics of this configuration showed a significant instability between  $\alpha = 10$  deg. and about  $\alpha = 18$  deg. This test determined that the cause of this instability was the interaction of the wing leading-edge vortex with the vertical tails. Moving the vertical tails either inboard or outboard from the baseline location eliminated this unfavorable interaction. Hahne, David E. Langley Research Center RTOP 505-70-69-01...

**Hydrogen Aircraft Technology** G.Daniel Brewer, 2017-11-22 Liquid hydrogen is shown to be the ideal fuel for civil transport aircraft, as well as for many types of military aircraft. Hydrogen Aircraft Technology discusses the potential of hydrogen for subsonic, supersonic, and hypersonic applications. Designs with sample configurations of aircraft for all three speed categories are presented, in addition to performance comparisons to equivalent designs for aircraft using conventional kerosine-type fuel and configurations for aircraft using liquid methane fuel. Other topics discussed include conceptual designs of the principal elements of fuel containment systems required for cryogenic fuels, operational elements (e.g., pumps, valves, pressure regulators, heat exchangers, lines and fittings), modifications for turbine engines to maximize the benefit of hydrogen, safety aspects compared to kerosine and methane fueled designs, equipment and facility designs for servicing hydrogen-fueled aircraft, production methods for liquid hydrogen,

and the environmental advantages for using liquid hydrogen. The book also presents a plan for conducting the necessary development of technology and introducing hydrogen fuel into the worldwide civil air transport industry. Hydrogen Aircraft Technology will provide fascinating reading for anyone interested in aircraft and hydrogen fuel designs.

*Ernst Mach's Vienna 1895-1930* J.T. Blackmore, R. Itagaki, S. Tanaka, 2013-03-14 Section Guide 1. Prolegomena 2. Biographical Sketch 3. Epistemology 4. Textbook Ontology 1. PROLEGOMENA While both philosophers and historians almost always love truth and the search for truth, and both often carry out extensive research, there can be noticeable differences when historians write about the history of philosophy and when philosophers write about it. Philosophers often look at the past with categories and interests taken from the present or at the least from the recent past, but many historians, especially those who love research for its own sake, will try to look at the past from a perspective either from that period or from even earlier. Both camps look for roots, but view them with different lenses and presuppositions. This prolegomena has been added to prepare some philosophers for what will hopefully only be the mildest of shocks, for seeing the history of philosophy in a way which does not treat what is recent or latest as best, but which loves the context of ideas for its own sake, a context which can be very foreign to contemporary likes and dislikes. To be sure, we historians can deceive ourselves as easily as philosophers, but we tend to do so about different things.

*Pressure and Heat Transfer Measurements for Hypersonic Flows Over Expansion Corners and Ahead of Ramps: Mach 5 and 8 data for expansion corner flows*  
Louis G. Kaufman, 1963 Pressure and heat transfer data were obtained for hypersonic flows over 40-degree expansion corners and ahead of ramps. Full and partial span ramps, having wedge angles up to 90 degrees, were tested at two locations on a sharp leading edge flat plate, with and without end plates. Pressure data were obtained for  $[M_{\infty}] = 5$  for model length Reynolds numbers between 1.1 and 6.6 million. Both pressure and heat transfer data were obtained for  $[M_{\infty}] = 8$  for Reynolds numbers between 1.1 and 3.3 million. -- page iii, pt.4.

Mach's Philosophy of Science J. Bradley, 2013-11-07 Dr Bradley's aim is to provide a work which will introduce readers to the philosophical standpoint employed by Mach in his expositions of physics. The author shows how Mach traces out the evolution of the metrical concepts of heat and mechanics, and includes a discussion of his reformulation of Newton's dynamical principles. Mach's view that we have a semi-awareness of both time and temperature is considered: there is no 'Mach Principle' in Mach's writings; the use of the term by Einstein and others has led to confusion, which the author attempts to remove. The newcomer to the philosophy of science is led to an insight

into the methods of one who has had a major influence on the subject.
