Donna Racheal

Macropods Graeme Coulson, Mark Derek Bruce Eldridge, 2010 A major symposium on macropods (kangaroos, wallabies and rat-kangaroos), sponsored by the Australian Mammal Society, was held in July 2006 at the University of Melbourne. It brought together the many recent advances in the biology of this diverse group of mammals and looked at: structure and function; neglected macropods; population biology; and macropod management. A total of 78 authors have contributed 34 chapters to the book, which concentrates on new developments in macropod biology, including topics such as genomics, landscape ecology, endangered species and fertility control.

The Fossil Macropodidae from Lake Menindee, New South Wales Richard H. Tedford, 1967

Tree-kangaroos of Australia and New Guinea Roger William Martin, 2005 To many people, the suggestion that a kangaroo could live up a tree is fantasy. Yet, in the rainforests of Far North Queensland and New Guinea, there are extraordinary kangaroos that do just that. Many aspects of these marsupials' anatomy and biology suggest a terrestrial kangaroo ancestor. Yet no one has, so far, come forward with a convincing explanation of how, why and when mammals that was so superbly adapted for life on the ground should end up back in the trees. This book reviews the natural history and biology of tree-kangaroos from the time of their first discovery by Europeans in the jungles of West Papua in 1826 right up to the present day, covering the latest research being conducted in Australia and New Guinea. Combining information from a number of disparate disciplines, the author sets forth the first explanation of this apparent evolutionary conundrum. Features * Provides a fascinating and readable account of an unusual evolutionary conundrum * Written by a field biologist with more than a decade's experience working with tree-kangaroos

Kangaroo Vernes Karl,Jackson Stephen,2011-03-04 Like the Sydney Opera House or Uluru, the kangaroo is a unique symbol of Australia. This is the remarkable story of our most famous marsupial, from its ancient origins and prehistoric significance to current-day management and conservation. Marsupial specialists Stephen Jackson and Karl Vernes examine our sustained fascination with kangaroos-spanning 40,000 years-that allows these engaging marsupials to be instantly recognised by people the world over. The amazing diversity of this group of animals is revealed, ranging from tiny forest dwellers and tree

kangaroos to large majestic animals living on the open plains of central Australia and the giant kangaroos that once roamed the Pleistocene landscape. The authors also investigate the natural history of kangaroos - their unique reproduction methods, intriguing behaviour, varied diet and trademark hopping ability - all of which make them such fascinating animals.
