Agricultural Research for Sustainable Food Systems in Sri Lanka Buddhi

Marambe, Jeevika Weerahewa, Warshi S. Dandeniya, 2020-03-30 A food system comprises the entire range of actors and interlinked activities related to food production, processing, distribution, marketing and trade, preparation, consumption, and disposal. When a food system operates without compromising the needs of future generations, it is considered to be a "Sustainable Food System." The present-day food systems in Sri Lanka are diverse, and the natural and physical environment, infrastructure, institutions, society and culture, and policies and regulations within which the food systems operate, as well as the technologies employed, have shaped their outcomes. Agricultural research is a key factor in terms of innovation and technological advances. Innovation has been the main driver of food systems' transformation over the past few decades and will be critical to addressing the needs of a rapidly growing population in a context of climate change and scarcity of natural resources. In addition, agricultural research must help meet the rising demand for food at affordable prices. Comprising 17 chapters written by specialist(s) in their respective subject-areas, this Contributed Volume on "Agricultural Research for Sustainable Food Systems in Sri Lanka: A Historical Perspective" shares the scientific knowledge accumulated by the National Agricultural Research System of Sri Lanka, including universities, and offers recommendations on how to make food systems more sustainable in order to address the current needs of Sri Lankan society. It presents perspectives on four key thematic areas, namely: (i) Crop and animal production, management, and improvement, (ii) Agro-product processing technologies, (iii) Natural resource management, and (iv) Socio-economic development and agri-business management.

Sagalassos I Marc Waelkens,1993 Sagalassos, once the metropolis of the Western Taurus range (Pisidia, Turkey), was only thoroughly surveyed in 1884 and 1885 by an Austrian team directed by K. Lanckoronski. In 1986-1989 this work was resumed by a British-Belgian team co-directed by Dr. Stephen Mitchell (University College of Swansea) and by Prof. Dr. Marc Waelkens (Catholic University of Leuven). In 1990 Sagalassos became a full scale Belgian project and a leading center for interdisciplinary archaeological and archaeometrical research. Due to its altitude, the site is one of the best preserved towns from classical antiquity, with a rich architectural and sculptural tradition dating from the second century BC to the sixth century AD. From early Imperial times until the early Byzantine period a complete range of coarse and red slip wares was produced locally. Excavations are concentrated on the upper and lower agoras to document the political and commercial life in the town and also in the area where a late Hellenistic fountain house, which still functions to date, and a Roman library were discovered. Major efforts are undertaken to restore the excavated monuments in their old glory. Several disciplines integrate the town again within its ancient environment and document the central role which Sagalassos played in the area.

Uneasy Warriors Sabine Frühstück,2007-08-14 Following World War II, Japan's postwar constitution forbade the country to wage war or create an army. However, with the emergence of the cold war in the 1950s, Japan was urged to establish the Self-Defense Forces as a way to bolster Western defenses against the tide of Asian communism. Although the SDF's role is supposedly limited to self-defense, Japan's armed forces are equipped with advanced weapons technology and the world's third-largest military budget. Sabine Frühstück draws on interviews, historical research, and analysis to describe the unusual case of a non-war-making military. As the first scholar permitted to participate in basic SDF training, she offers a firsthand look at an army trained for combat that nevertheless serves nontraditional military needs.

The Future of Strategy Colin S. Gray,2015-10-12 Strategy is not a modern invention. It is an essential and enduring feature of human history that is here to stay. In this original essay, Colin S. Gray, world-renowned scholar of strategic thought, discusses the meaning of strategy and its importance for politicians and the military as a means of achieving desired outcomes in complex, uncertain conditions. Drawing on a wide range of examples from the Great Peloponnesian War to the Second World War, Vietnam, and the ongoing conflicts in Iraq and Afghanistan, Gray ably shows how great military thinkers of the past and present have acted strategically in their various ideological, political, geographical and cultural contexts. Looking to the future, he argues that strategy will continue to provide a vital tool-kit for survival and security, but that the global threat posed by nuclear weapons remains an on-going challenge without obvious practical solutions. As Gray boldly asserts, there is no promised land ahead, only hard and dangerous times that will require us to master the theory and practice of strategy to secure our own future.

Physical Virology Urs F. Greber,2019-07-17 This book explores a new challenge in virology: to understand how physical properties of virus particles (virions) and viruses (infected cells) affect the course of an infection. Insights from the emerging field of physical virology will contribute to understanding of the physical nature of viruses and cells, and will open new ways for anti-viral interference. Nine chapters and an editorial written by physicists, chemists, biologists and computational experts describe how virions

serve as trail blazers in uncharted territory of cells. The authors outline how particles change in composition as they interact with host cells. Such virus dynamics are crucial for virus entry into cells and infection. It influences the modern concepts of virus-host interactions, viral lineages and evolution. The volume gives numerous up-to-date examples of modern virology and provides a fascinating read for researchers, clinicians and students in the field of infectious diseases.
