Journey to Mars Lorin Gruber,2014-12-15 Named by the ancient Romans after the god of war, this small red planet is fascinating. Readers will explore the Red Planet's formation, orbit and rotation, and unique features and atmosphere, as well as the exciting missions to Mars including exploration by the rovers Spirit, Opportunity, and Curiosity. Captivating photographs will make readers feel like they're right there on the dusty, windy surface of Mars.

The Atmosphere and Climate of Mars Robert M. Haberle,R. Todd Clancy,François Forget,Michael D. Smith,Richard W. Zurek,2017-06-29 Humanity has long been fascinated by the planet Mars. Was its climate ever conducive to life? What is the atmosphere like today and why did it change so dramatically over time? Eleven spacecraft have successfully flown to Mars since the Viking mission of the 1970s and early 1980s. These orbiters, landers and rovers have generated vast amounts of data that now span a Martian decade (roughly eighteen years). This new volume brings together the many new ideas about the atmosphere and climate system that have emerged, including the complex interplay of the volatile and dust cycles, the atmosphere-surface interactions that connect them over time, and the diversity of the planet's environment and its complex history. Including tutorials and explanations of complicated ideas, students, researchers and non-specialists alike are able to use this resource to gain a thorough and up-to-date understanding of this most Earth-like of planetary neighbours.

Towards Mars! Risto J. Pellinen,Paul Raudsepp,2000 The planet Mars has excited people's minds for centuries. After many attempts, in 1997 two probes, Mars Pathfinder and Mars Global Surveyor, successfully reached Mars. The newly published research results have again given hope that primitive life may be found on Mars. But Mars has not revealed all its secrets. The new studies have also given some surprising information. In addition to that, exploring our neighbour Mars gives us valuable knowledge that enables us to understand better our planet Earth. This book contains the basic facts about Mars known to Mankind at this moment. The authors are well-known Mars explorers from the U.S.A., Japan, and Europe.

Landscapes of Mars Gregory L. Vogt,2008-07-31 Containing beautiful and exiting images that will spark the imagination, this is essentially a picture book providing a visual tour of Mars. All the major regions and topographical features are shown and supplemented with chapter introductions and extended captions. In a way, think of the book as a visual tourist guide. Other topics covered include Martian uplands, Giant volcanoes, the Grand Canyon of Mars, and much more. At the end of the book is an exciting gallery of the best 3D images of Mars making the book a perfect tool for understanding Mars and its place in the solar system.

Mars Allan B. Cobb,2004-08-15 Presents scientific discoveries about the atmosphere, size, surface, orbit, and rotation of the Red Planet.

Mars Markus Hotakainen,2010-03-11 This absorbing book tells the story of Mars since the dawn of mankind's curiosity for celestial wonders. It covers everything, right from our ancient beliefs, through the revolution in our concepts of the cosmos around us in the 1600s, to the present day knowledge and beyond. It takes the reader on a journey all the way to the futuristic visions of science fiction and terraformed Mars with conditions suitable to Earth life. The story is told in a readable form with an absence of technical jargon. The text is supported by informative imagery and a simple, but inspiring layout with some special features such as a flip movie of the rotation of Mars.

Exploring Mars D. J. Ward,2008-06-01 Highly accessible writing combines with a magazine-style format in this series focusing on cutting-edge science. Each subject illustrates how scientists solve problems and develop new technology while firmly connecting each title to core curricular subjects. The books are aimed at children aged nine to 14.

Mission to Mars Eve Hartman,Wendy Meshbesh,2011-01-01 Traces the history of Mars exploration and describes future plans to explore and inhabit the planet.

Assessment of Mars Science and Mission Priorities National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary and Lunar Exploration,2003-08-08 Within the Office of Space Science of the National Aeronautics and Space Administration (NASA) special importance is attached to exploration of the planet Mars, because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made. The failures in 1999 of two NASA missions-Mars Climate Orbiter and Mars Polar Lander-caused the space agency's program of Mars exploration to be systematically rethought, both technologically and scientifically. A new Mars Exploration Program plan (summarized in Appendix A) was announced in October 2000. The Committee on Planetary and Lunar Exploration (COMPLEX), a standing committee of the Space Studies Board of the National Research Council, was asked to examine the scientific content of this new program. This goals of this report are the following: -Review the state of knowledge of the planet Mars, with special emphasis on findings of the most recent Mars missions and related research activities; -Review the most important Mars research opportunities in the immediate future; -Review scientific priorities for the exploration of Mars identified by COMPLEX (and other scientific advisory groups) and their motivation, and consider the degree to which recent discoveries suggest a reordering of priorities; and -Assess the congruence between NASA's evolving Mars Exploration Program plan and these recommended priorities, and suggest any adjustments that might be warranted.

Ancient Aliens on Mars II Mike Bara,2014-06-02 In *Ancient Aliens on Mars II*, New York Times bestselling author Mike Bara returns the reader to Mars to examine the enduring mysteries of the Red Planet. Building on the case made in *Ancient Aliens on Mars* and using data acquired from sophisticated new scientific instruments like the Mars Odyssey THEMIS infrared imager, Bara shows that the region of Cydonia overlays a vast underground city full of enormous structures and devices that may still be operating. He peels back the layers of mystery to show images of tunnel systems, temples and ruins, and exposes the sophisticated NASA conspiracy designed to hide them and discredit the researchers that discovered these exotic ruins. Bara also tackles the enigma of Mars' hollowed out moon Phobos, and exposes evidence from over 30 years of observations that it is artificial. Long-held myths about Mars, including claims that it is protected by a sophisticated UFO defense system, are examined and illuminated. Data from the Mars rovers Spirit, Opportunity and Curiosity is examined; everything from fossilized plants to mechanical debris is exposed in images taken directly from NASA's own archives. Finally, the author offers his take on the secret history of the Red Planet and what happened to the highly advanced civilization that once flourished there.

Breakthroughs in Mars Exploration Karen Latchana Kenney,2019-02-01 Will astronauts one day travel all the way to Mars? Get informed about Mars research and plans for Mars exploration, and discover key aspects of the science and technology involved in solving the mysteries of the red planet.

Preventing the Forward Contamination of Mars National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Preventing the Forward Contamination of Mars,2006-04-22 Recent spacecraft and robotic probes to Mars have yielded data that are changing our understanding significantly about the possibility of existing or past life on that planet. Coupled with advances in biology and life-detection techniques, these developments place increasing importance on the need to protect Mars from contamination by Earth-borne organisms. To help with this effort, NASA requested that the NRC examine existing planetary protection measures for Mars and recommend changes and further research to improve such measures. This report discusses policies, requirements, and techniques to protect Mars from organisms originating on Earth that could interfere with scientific investigations. It provides recommendations on cleanliness and biological burden levels of Mars-bound spacecraft, methods to reach those levels, and research to reduce uncertainties in preventing forward contamination of Mars.

Mars Exploration Giuseppe Pezzella,Antonio Viviani,2020-09-09 More than 50 years after the Mariner 4 flyby on 15 July 1965, Mars still represents the next frontier of space explorations. Of particular focus nowadays is crewed missions to the red planet. Over three sections, this book explores missions to Mars, in situ operations, and human-rated missions. Chapters address elements of design and possible psychological effects related to human-rated missions. The information contained herein will allow for the development of safe and efficient exploration missions to Mars.

Dynamic Mars Richard J. Soare,Susan J. Conway,Stephen M. Clifford,2018-08-07 *Dynamic Mars: Recent and Current Landscape Evolution of the Red Planet* presents the latest observations, interpretations, and explanations of geological change at the surface or near-surface of this terrestrial

body. These changes raise questions about a decades-old paradigm, formed largely in the aftermath of very coarse Mariner-mission imagery in the 1960s, suggesting that much of the interesting geological activity on Mars occurred deep in its past, eons ago. The book includes discussions of (1) Mars’ ever-changing atmosphere and the impact of this on the planet’s surface and near-surface; (2) the possible involvement of water in relatively new, if not contemporary, gully-like flows and slope streaks (i.e. recurring slope lineae); and (3) the identification of a broad suite of agents and processes (i.e. glacial, periglacial, aeolian, meteorological, volcanic, and meteoric) that are actively revising surface and near-surface landscapes, landforms, and features on a local, regional, and hemispheric scale. Highly illustrated and punctuated by data from the most recent Mars missions, Dynamic Mars is a valuable resource for all levels of research in the geological history of Mars, as well as of the three other terrestrial planets. Utilizes observational and model-based data as well as geological context to frame the understanding of the dynamic surface and near-surface of Mars Presents a broad spectrum of highly regarded experts and themes to discuss and evaluate the geological history of late and current Mars Includes extensive and detailed imagery to clearly illustrate these themes, discussions, and evaluations

The Surface of Mars Michael H. Carr,2007-01-11 Our knowledge of Mars has grown enormously over the last decade as a result of the Mars Global Surveyor, Mars Odyssey, Mars Express, and the two Mars Rover missions. This book is a systematic summary of what we have learnt about the geological evolution of Mars as a result of these missions. It describes the diverse Martian surface features and summarizes current ideas as to how, when, and under what conditions they formed, and explores how Earth and Mars differ and why the two planets evolved so differently. The author also discusses possible implications of the geologic history for the origin and survival of indigenous Martian life. Up-to-date and highly illustrated, this book will be a principal reference for researchers and graduate students in planetary science. The comprehensive list of references will also assist readers in pursuing further information on the subject. Colour images can be found at www.cambridge.org/9780521872010.

The Volcanoes of Mars James R. Zimbelman,David A. Crown,Peter J. Mouginis-Mark,Tracy K. P. Gregg,2020-12-05 The Volcanoes of Mars offers a clear, cohesive summary of Mars volcanology. It begins with an introduction to the geology and geography of the red planet and an overview of its volcanic history, and continues to discuss each distinct volcanic province, identifying the common and unique aspects of each region. Incorporating basic volcanological information and constraints on the regional geologic history derived from geologic mapping, the book also examines current constraints on the composition of the volcanic rocks as investigated by both orbiting spacecraft and rovers. In addition, it compares the features of Martian volcanoes to those seen on other volcanic bodies. Concluding with prospects for new knowledge to be gained from future Mars missions, this book brings researchers in volcanology and the study of Mars up to date on the latest findings in the study of volcanoes on Mars, allowing the reader to compare and contrast Martian volcanoes to volcanoes studied on Earth and throughout the Solar System. Presents clearly organized text and figures that will quickly allow the reader to find specific aspects of Martian volcanism Includes definitions of geological and volcanological terms throughout to aid interdisciplinary understanding Summarizes key results for each volcanic region of Mars and provides copious citations to the research literature to facilitate further discovery Synthesizes the most current data from multiple spacecraft missions, including the Mars Reconnaissance Orbiter, as well as geochemical data from Martian meteorites Utilizes published geologic mapping results to highlight the detailed knowledge that exists for each region

The Century of Space Science J.A. Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field. Hence, at this point in history we are in a unique position to gain first-hand insight into the field and its development. To this end, The Century of Space Science, a scholarly, authoritative, reference book presents a chapter-by-chapter retrospective of space science as studied in the 20th century. The level is academic and focuses on key discoveries, how these were arrived at, their scientific consequences and how these discoveries advanced the thoughts of the key players involved. With over 90 world-class contributors, such as James Van Allen, Cornelis de Jager, Eugene Parker, Reimar Lüst, and Ernst Stuhlinger, and with a Foreword by Lodewijk Woltjer (past ESO Director General), this book will be immensely useful to readers in the fields of space science, astronomy, and the history of science. Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection.
