### **Sky and Telescope's Mars Topography Globe** Sky

Publishing, 2005-06-01 Imagine yourself climbing huge volcanoes and rafting down monstrous flood channels with this globe portraying the red planet's terrain. Millions of altitude measurements from NASA's Mars Global Surveyor spacecraft went into the color-coded elevation scheme. The 12-inch globe was produced in cooperation with NASA and the US Geological Survey.

**Magnificent Mars** Ken Crowell, 2003-10-21 Mars has long offered the prospect of another living world near Earth. Although NASA's first spacecraft dashed visions of little green men tending canals, recent voyages have painted a picture of an intriguing planet that may have once resembled Earth, with warmth, water, and possibly life. Mars may answer the great question Are we alone?; for if Mars, like Earth, gave rise to life, then trillions of other worlds throughout the universe have surely done the same. Harvard-trained astronomer Ken Crowell set the standard for elegance and eloquence with his stunning photographic triumph, *Magnificent Universe*. Now, with insightful prose and astonishing images, he presents the red planet's full glory in *Magnificent Mars*, showing volcanoes taller than Mount Everest, spiral-shaped polar caps of ice, and a canyon system that could stretch from Ohio to California. Here is a concise synthesis of the latest research on Mars, accompanied with the very best full-color images, expertly reprocessed to look even better than NASA's own versions, from the Hubble Space Telescope, Viking, Pathfinder, Mars Global Surveyor, Mars Odyssey, and other spacecraft. Highlights include a foldout panorama of the Martian surface; a never-before-published, rainbow-colored topographic map; and a sequence showing a full rotation of Mars, courtesy of the Hubble Space Telescope. Many of these images have never appeared in a book before. Few have ever looked so good. In lyrical prose, Dr. Crowell weaves these stupendous images into a virtual tour of Mars by organizing them around the four elements -- Earth, Air, Fire, and

Water. From the northern plains of Vastitas Borealis to the towering Olympus Mons and other volcanoes of the Tharsis bulge, we explore the red planet's geology, topography, and surface. From the frigid climate to the massive dust storms that can engulf the entire globe, we examine the thin Martian atmosphere and the clues it preserves to the planet's wetter past. And, from the flood channels that spill into Chryse Planitia to the vast potential lakebed of ancient Hellas, we see stunning images of ancient rivers and floods, triggering speculation that a warm, wet Mars may have given rise to life that survives to this day. The tour concludes with a voyage to the planet's two potato-shaped moons, Phobos and Deimos, complete with rainbow-colored topographic maps. Unique color-coded tables on Mars, its atmosphere, its life history, its moons, and NASA missions to the planets appear in a useful reference section, along with a glossary and suggestions for further reading. With its large format, superb images, and compelling text, *Magnificent Mars* is the next best thing to standing on the red planet itself. In future years NASA will launch numerous missions to Mars, and *Magnificent Mars* is the definitive guide to what these spacecraft will see. Indeed, the first human explorers to Mars may want to take a copy of *Magnificent Mars* aboard their spaceship.

**The Atmosphere and Climate of Mars** Robert M. Haberle, R. Todd Clancy, François Forget, Michael D. Smith, Richard W. Zurek, 2017-06-29 Humanity has long been fascinated by the planet Mars. Was its climate ever conducive to life? What is the atmosphere like today and why did it change so dramatically over time? Eleven spacecraft have successfully flown to Mars since the Viking mission of the 1970s and early 1980s. These orbiters, landers and rovers have generated vast amounts of data that now span a Martian decade (roughly eighteen years). This new volume brings together the many new ideas about the atmosphere and climate system that have emerged, including the complex interplay of the volatile and dust cycles, the atmosphere-surface

interactions that connect them over time, and the diversity of the planet's environment and its complex history. Including tutorials and explanations of complicated ideas, students, researchers and non-specialists alike are able to use this resource to gain a thorough and up-to-date understanding of this most Earth-like of planetary neighbours.

**Geographies of Mars** K. Maria D. Lane, 2011 This volume explores the origins of our Martian obsession in the late nineteenth century and examines the way turn-of-the-century Americans and Europeans thought about space, knowledge, and power. The author paints a picture of how scientists and the public saw [Mars] around the beginning of the 20th century, when canals on the Red Planet seemed a very real possibility. It is a story of mountain observatories, of fieldwork conducted at a distance, and of how Mars's geographers sought social and scientific legitimacy, exploring how astronomy and geography intersected in the debates over the existence of life on Mars.

*Sky and Telescope's Mars Globe* Sky Publishing, 2005-06-01 Even the Hubble Space Telescope can't show you all the details found on this new edition of our classic Mars globe. Created with more than 6,000 Viking orbiter images, our 12-inch globe approximates the planet's true color. Produced in cooperation with NASA and the US Geological Survey.

**The Geology of Mars** Mary Chapman, 2007-05-17 Interpretations of the geological processes operating on Mars are based on our knowledge of processes occurring on Earth. This 2007 book presents contributions from leading planetary geologists to demonstrate the parallels and differences between these two planets, and will therefore be a key reference for students and researchers of planetary science.

Mars on Earth Robert Zubrin, 2004 The dramatic story of a band of space pioneers, who simulated a mission to the Red Planet in the most desolate regions on Earth. Here is the incredible true story of a group of determined space voyagers who wouldn't wait

for the space program to catch up with them. From 1999 to 2002, the stalwarts of the Mars Society undertook a virtual exploration of Mars in the most isolated spots on Earth, where they replicated and studied the real-life challenges of exploring the Red Planet.

**Earth and Mars** Stephen E. Strom,Bradford A.

Smith,2015-10-22 Nearly five billion years ago, Earth and Mars were born together as planetary siblings orbiting a young, emerging Sun. Yet today, one planet is water rich and life bearing, while the other is seemingly cold, dry, and forbidding. Earth and Mars is a fusion of art and science, a blend of images and essays celebrating the successful creation of our life-sustaining planet and the beauty and mystery of Mars. Through images of terrestrial landscapes and photographs selected from recent NASA and European Space Agency missions to Mars, Earth and Mars reveals the profound beauty resulting from the action of volcanism, wind, and water. The accompanying text provides a context for appreciating the role of these elemental forces in shaping the surfaces of each planet, as well as the divergent evolutionary paths that led to an Earth that is teeming with life, and Mars that is seemingly lifeless. Earth and Mars inspires reflection on the extraordinarily delicate balance of forces that has resulted in our good fortune: to be alive and sentient on a bountiful blue world.

**A Traveler's Guide to Mars** William K. Hartmann,2003-01-01

Utilizes a travel guide format to bring together recent scientific discoveries about Mars, describing such features as its dry riverbeds, huge volcano, possible ancient sea floor, and impact craters.

*Mars and Its Canals* Percival Lowell,1906

**Voyage to Mars** Laurence Bergreen,2001 Describes NASA's efforts to gather data on Mars' evolution and environment.

**Exploring Planetary Climate** Ralph Lorenz,2019-01-03 An accessible and engaging account of the history of climate science and exploration on Earth and other planetary bodies.

Mars On Earth: A Study Of The Qaidam Basin Long

Xiao,2021-01-04 Mars has been extensively photographed by cameras and compositionally detected by spectrometers onboard orbiters on a global scale, and explored in-situ by landers and rovers at both local and outcrop scales in different locations. The results have proved that the Martian surface is rich in Earth-like geomorphologies, and the study of terrestrial analogs to Mars has been listed as one of the highest priorities of Martian science. With increasing new discoveries by in-situ explorations, Mars exploration has begun to enter the era of focusing on detailed analyses at regional to outcrop levels, rather than global mapping. Analog studies are playing a crucial role in this transition, making this book, which introduces the methodology and provides cases for readers, essentially important. Dozens of sites on Earth have been listed as analog targets for comparative study with the geomorphology, geology, geochemistry, environment and habitability of Mars. However, due to the diversity of landforms and forming mechanisms, and the long history of Mars, no single analog site on Earth can be fully compared to Mars. Nonetheless, the Qaidam Basin has been listed as an unique Mars analog site for studying the red planet's geomorphology, geology, and environmental changes, particularly regarding the evolution of paleolakes on Mars. This kind of setting has always been listed as a top priority for the search of life on Mars. This book contains first-hand information and on-site images obtained by the work's contributing authors, and is an essential read for anyone interested in Martian geomorphology and its evolution processes and history.

**The Case for Mars** Robert Zubrin,2021-02-02 The Case for Mars makes living in space seem more possible than ever in this updated 25th anniversary edition, featuring the latest information on the planet's exploration and the drive to send humans there. Since the beginning of human history, Mars has been an alluring dream—the stuff of legends, gods, and mystery. The planet most like ours, it had long been thought impossible to reach, let alone

explore and inhabit. But that is changing fast. In February 2021, the American rover Perseverance will touch down on Mars. Equipped with a powerful suite of scientific instruments—including some that will attempt to make oxygen from the Martian atmosphere—the rover also carries a helicopter that will take spectacular panoramic movies from the air. Most exciting of all, a spectrometer onboard may find evidence of fossils left behind by microbes millions of years ago, when the planet was warm and wet, proving at last that life on Earth is not unique, but a general phenomenon in the universe. Meanwhile, in Boca Chica, Texas, Elon Musk’s SpaceX has created a shipyard that is building and testing the vessels that will take humans to Mars before this decade is out. Leading space exploration expert Robert Zubrin crafted the daring blueprint for humanity’s reach to the Red Planet twenty-five years ago, when he first published *The Case for Mars*. Now, in this updated edition, he looks to the future once more to describe how—in an era when the American space program and private companies like SpaceX are racing to send astronauts to Mars—our first colonies there are imminent. In the grand tradition of successful explorers, Zubrin calls for a travel-light and live-off-the-land approach to Martian settlement. He explains how scientists can use present-day technology to send humans to Mars, produce fuel and oxygen on the planet’s surface with its own natural resources, build bases and communities, and one day, terraform—or alter the atmosphere of the planet in order to pave the way for sustainable life. As a landmark new mission opens the decisive campaign to take humans to the Red Planet, Zubrin lays out a comprehensive plan to build life on a new world.

*Destination: Mars* Seymour Simon, 2016-09-06 Award-winning science writer Seymour Simon explores the Red Planet through fascinating facts and amazing full-color photographs. Readers will learn about the recent discovery of water, the Valles Marineris—the biggest valley on Mars—the ice caps, recent expeditions, and more. This nonfiction picture book is an excellent

choice to share during homeschooling, in particular for children ages 6 to 8. It's a fun way to learn to read and as a supplement for activity books for children. This updated edition includes: author's note stunning full-color photographs glossary index websites and additional reading sources Supports the Common Core Learning Standards, Next Generation Science Standards and the Science, Technology, Engineering, and Math (STEM) standards.

**Discovering Mars** William Sheehan, Jim Bell, 2021-11-09 For millennia humans have considered Mars the most fascinating planet in our solar system. We've watched this Earth-like world first with the naked eye, then using telescopes, and, most recently, through robotic orbiters and landers and rovers on the surface. Historian William Sheehan and astronomer and planetary scientist Jim Bell combine their talents to tell a unique story of what we've learned by studying Mars through evolving technologies. What the eye sees as a mysterious red dot wandering through the sky becomes a blurry mirage of apparent seas, continents, and canals as viewed through Earth-based telescopes. Beginning with the Mariner and Viking missions of the 1960s and 1970s, space-based instruments and monitoring systems have flooded scientists with data on Mars's meteorology and geology, and have even sought evidence of possible existence of life-forms on or beneath the surface. This knowledge has transformed our perception of the Red Planet and has provided clues for better understanding our own blue world. *Discovering Mars* vividly conveys the way our understanding of this other planet has grown from earliest times to the present. The story is epic in scope—an Iliad or Odyssey for our time, at least so far largely without the folly, greed, lust, and tragedy of those ancient stories. Instead, the narrative of our quest for the Red Planet has showcased some of our species' most hopeful attributes: curiosity, cooperation, exploration, and the restless drive to understand our place in the larger universe. Sheehan and Bell have written an ambitious first draft of that narrative even as the latest chapters continue to be added both by researchers on

Earth and our robotic emissaries on and around Mars, including the latest: the Perseverance rover and its Ingenuity helicopter drone, which set down in Mars's Jezero Crater in February 2021.

**The Surface of Mars** Michael H. Carr, 2007-01-11 Our knowledge of Mars has grown enormously over the last decade as a result of the Mars Global Surveyor, Mars Odyssey, Mars Express, and the two Mars Rover missions. This book is a systematic summary of what we have learnt about the geological evolution of Mars as a result of these missions. It describes the diverse Martian surface features and summarizes current ideas as to how, when, and under what conditions they formed, and explores how Earth and Mars differ and why the two planets evolved so differently. The author also discusses possible implications of the geologic history for the origin and survival of indigenous Martian life. Up-to-date and highly illustrated, this book will be a principal reference for researchers and graduate students in planetary science. The comprehensive list of references will also assist readers in pursuing further information on the subject. Learn all about past missions to Mars, and take a sneak peek into future projects from NASA and beyond. An avid traveler, Alexandra Lefort has lived in

France, Scotland, Switzerland, and the U.S., and has now made her home in Vancouver, B.C. Passionate about exploration, she completed a PhD in planetary sciences at the University of Bern, Switzerland, focusing her academic research on the investigations of Martian water, with a particular interest for the question of habitability and extraterrestrial life. This interest in the origin and development of life also translates into artistic representation of terrestrial lifeforms and environments. A self-taught artist, her favorite media are photography, with a portfolio which includes wildlife portraits, macro photography, landscapes, and traditional drawing and painting, including graphite, pastels, acrylics, and digital art. She has designed several coins for the Royal Canadian Mint and has collaborated with paleoartist Julius Csotonyi on realistic depictions of prehistoric wildlife, including a mural for the 2015-2018 exhibit "Ice Age Bison Discovery: Our Frozen Past and Thawing Future" at the Prince of Wales Northern Heritage Centre, Yellowknife, Northwest Territories, Canada, and collaborative paintings in The paleoart of Julius Csotonyi, Why Did T. rex Have Short Arms?: And Other Questions about Dinosaurs, and Discovering Sharks.

*The Atlas of Mars* Kenneth S. Coles, Kenneth L. Tanaka, Philip R. Christensen, 2019-08-22 Planetary scientist and educator Ken Coles has teamed up with Ken Tanaka from the United States Geological Survey's Astrogeology team, and Phil Christensen, Principal Investigator of the Mars Odyssey orbiter's THEMIS science team, to produce this all-purpose reference atlas, *The Atlas of Mars*. Each of the thirty standard charts includes: a full-page color topographic map at 1:10,000,000 scale, a THEMIS daytime infrared map at the same scale with features labeled, a simplified geologic map of the corresponding area, and a section describing prominent features of interest. The Atlas is rounded out with extensive material on Mars' global characteristics, regional geography and geology, a glossary of terms, and an indexed gazetteer of up-to-date Martian feature names and nomenclature.

This is an essential guide for a broad readership of academics, students, amateur astronomers, and space enthusiasts, replacing the NASA atlas from the 1970s.
