*The Race for Hitler's X-Planes* John

Christopher,2012-10-01 During World War 2, Hitler's engineers had pioneered an incredible array of futuristic secret weapons, from the Me 262, the first operational jet fighter, to the deadly V2 inter continental ballistic missile. With the Third Reich shattered and lying in ruins, in the summer of 1945, the Allies launched a frantic race to grab what they saw as the justifiable spoils of war. The Americans and Russians in particular were anxious to secure not only the aircraft and the research and production facilities, but also the key German scientists and engineers. This Nazi technology would define the balance of power in the phoney peace of the Cold War era, launching an arms race that shaped our modern world for decades to come. But what of Britain's role in this supermarket sweep? The Race for Hitler's X-Planes tells the untold story of the British mission to Germany.

**Me 163** Stephen Ransom,Hans-Hermann

Cammann,2002 Following years of detailed research, this is the first volume in a new two-part work on the Luftwaffe's

legendary Messerschmitt Me 163 rocket-powered interceptor. The authors have unearthed incredible new documentary material and previously unpublished photographs and have received co-operation from many former pilots who flew this unique and daunting aircraft. This book focuses on the evolution, design and development of tailless and rocket powered aircraft during the years leading up to the Second World War as well the subsequent deployment of the Me 163 by the specialist test unit, Erprobungskommando 16. It also includes a detailed study of Me 163 production and an introduction to the operational use of the rocket fighter by JG 400 in the defense of the Reich. Accompanied by superb color artwork by leading aviation artist, Tom Tullis and many technical illustrations, this work will undoubtedly be recognized as the standard reference on the subject for years to come.

*Captured Eagles* Frederick A. Johnsen, 2014-10-20 The growth in size, lethality, and technology of the German Luftwaffe was of concern to some defense planners in the United States before American entry into the war. Learning about the Luftwaffe became a significant effort once the conflict broke out in Europe. From defectors with German aircraft to battlefield trophies and combat crew reports, the race to understand German aero technology took on sometimes heroic proportions. After the war, German technology infused American aerospace developments in many ways: German ribbon parachutes were evaluated for high-speed bailouts; sweptwing leading edge slat technology benefited the F-86 Sabre; overall comprehension of sweptwing benefits to fast jet aircraft was validated; pulse jet V1s and supersonic V2 rockets boosted American drone weapon, ballistic missile, and space exploration efforts. In this volume Frederick A. Johnsen traces that path of discovery.

### *Me 163 vs Allied Heavy Bombers* Robert

Forsyth, 2024-04-25 An illustrated account of the dramatic engagement between the Luftwaffe's Me 163 units and Allied bombers during the closing years of World War II. In the summer of 1944, US Army Air Force (USAAF) aircrews flying over the Third Reich reported observing small, high-speed 'batlike' aircraft flying close to their formations. The Luftwaffe's extraordinary Messerschmitt Me 163 rocket-powered interceptor was making its devastating debut with Jagdgeschwader (JG) 400. Capable of reaching high altitudes in the shortest possible time by using a volatile rocket fuel, the Me 163 was the Luftwaffe's most impressive yet dangerous aircraft, and the fastest in the world. Luftwaffe expert Robert Forsyth details the testing of the aircraft and its lethal SG 500 'Fighter Fist' weapons system, as well as its deployment against the B17s and B24s of the USAAF's Eighth Air Force and, from late 1944, the Lancasters and Halifaxes of RAF Bomber Command. These

duels started a deadly form of warfare, with the bomber squadrons striking at Germany's synthetic oil refineries and jet airfields, and the Me 163s of JG 400 trying to stop them using cutting-edge aeronautical technology. Using specially commissioned artwork, original photographs and rare first-hand interviews with the pilots that fought the decisive dogfights, this exciting book describes the pivotal encounters over Northern Europe.

**Rocketing Into the Future** Michel van Pelt, 2012-05-30 This book describes the technology, history, and future of rocket planes. Michel van Pelt journeys into this exciting world, examining the exotic concepts and actual flying vehicles that have been devised over the last hundred years. He recounts the history of rocket airplanes, from the early pioneers who attached simple rockets onto their wooden glider airplanes to the modern world of high-tech research vehicles. The author visits museums where rare examples of early rocket planes are kept and modern laboratories where future spaceplanes are being developed. He explains the technology in an easily understandable way, describing the various types of rocket airplanes and looking at the possibilities for the future. Michel van Pelt considers future spaceplanes, presenting various modern concepts and developments. He describes the development from cutting edge research via demonstrator vehicles to operational use. He also evaluates the replacement of the Space Shuttle with a seemingly old-fashioned capsule system, the parallel developments in suborbital spaceplanes such as SpaceShipOne and SpaceShipTwo, piloted versus automatic flight, and related developments in airliners and military aircraft.

*World War II Fighter Planes Spotter's Guide* Tony Holmes, 2021-02-04 World War II saw pilots from around the world battling in the skies over Europe, Asia and Africa, with

victory resting upon their nerve, skill and the capabilities of some of history's most iconic aircraft. In the chaos of battle, it was vital that they could quickly identify friend from foe. But do you know your Hurricane from your Bf 109, or what the legendary P-51 Mustang looks like? Do you know the wingspan of the A6M Zero-sen, or how fast it could fly? THE WORLD WAR II FIGHTER PLANES SPOTTER'S GUIDE answers all of these questions and more, providing essential information on over 90 legendary aircraft, from the celebrated Spitfire to the jet-powered Me 262. Featuring full-colour artwork to aid recognition, as well as all the details you need to assess their performance, this is the perfect pocket guide to the Allied and Axis fighters of World War II.

### **The Messerschmitt Me 163 Komet** Marek

Ryś,2021-09-30 Although the German Me 163 Komet rocket fighter was created as a remedy for the mass air raids of the Allied air force on Germany, its origins date back to 1938. Alexander Lippisch then began work at the DFS factory on a tailless rocket-propelled aircraft, designated as DFS 194. At the beginnings of 1939, the project was handed over to the Messerschmitt factory and there it developed into the Me 163A. Two prototypes of this aircraft - V4 and V5 - were completed in 1941 and flown as gliders. Then the V4 received a Walter HWK R.II rocket engine with a thrust of 7.5 kN, and on October 2, 1941 H. Dittmar achieved a speed of 1003 km/h on mentioned plane. Thirteen Me 163As were built for training.

*Canadian Warplanes* Harold A. Skaarup,2009-11-16 This aviation handbook is designed to be used as a quick reference to the classic military heritage aircraft that have been flown by members of the Canadian Air Force, Royal Canadian Air Force, Royal Canadian Navy, Canadian Army and the present-day Canadian Forces. The interested reader

will find useful information and a few technical details on most of the military aircraft that have been in service with active Canadian squadrons both at home and overseas. 100 selected photographs have been included to illustrate a few of the major examples in addition to the serial numbers assigned to Canadian service aircraft. For those who like to actually see the aircraft concerned, aviation museum locations, addresses and contact phone numbers have been included, along with a list of aircraft held in each museums current inventory or on display as gate guardians throughout Canada and overseas. The aircraft presented in this edition are listed alphabetically by manufacturer, number and type. Although many of Canadas heritage warplanes have completely disappeared, a few have been carefully collected, restored and preserved, and some have even been restored to flying condition. This guide-book should help you to find and view Canadas Warplane survivors.

**Rcaf War Prize Flights, German and Japanese Warbird Survivors** Harold A. Skaarup, 2006-05-23 This handbook concerns the collection of Air Technical Intelligence, and the test flying of war prizes carried out by two RCAF bomber pilots who were posted to the Royal Aircraft Establishment's Foreign Aircraft Flight, Farnborough, in the United Kingdom in May 1945. Their primary task was to visit former Luftwaffe airfields, and to find and fly back any aircraft they deemed worthy of evaluation. The list of aircraft found here does not include every German combat aircraft of the Second World War, as it focuses on those warbirds captured and flown by members of the RCAF, or sent to Canada as war prizes. Very few of these rare aircraft exist today, and therefore, information on known locations where German, Japanese and Italian warbird survivors may be found is included. As a

member of the Canadian Aviation Preservation Association and the Canadian Aviation Artists Association, the author strongly supports the preservation of Canada's aviation heritage. The primary intent of this handbook is to provide information for aviation artists and enthusiasts looking for that unusual never before painted military aviation subject, and to support the efforts of those engaged in the search for those missing warbirds for which no examples currently exist.
